

Industry Generic User Guide

The metrc User Guide 2017 Version 7.1

The Metrc system was developed in accordance with the State and the State's rules and regulations governing the Marijuana Industry. The State is tasked with the regulation of the State's two marijuana industries (Medical and Retail), the State is responsible for providing the rules under which these industries are expected to operate. All rules are written in response to the direction and authority provided by state statute. These rules are put in place in accordance with the State's rules and regulations. For specific questions regarding rules and regulations Metrc users should refer to the State. Operational questions regarding Metrc can be addressed with Franwell Inc.

Please note the State has made several rules with regards to who may and may not access the Metrc system. The regulations define many aspects of the responsibility of who is allowed in Metrc, what they are allowed to do while in the Metrc system and what they are responsible for when they have entered information into the Metrc system. The Metrc manual is a reference tool for those people who are lawfully allowed to actively use the system and have received proper credentials under the enforcement division's rules and regulations. It is assumed that all users of the Metrc manual have read, understand and are compliant with these rules and regulations.

Overview of Metrc

Metrc stands for Marijuana Enforcement, Tracking, Reporting and Compliance. Metrc is a State Mandated Tracking and Reporting Software to chart your chain of custody for your Marijuana and Marijuana Infused Products from seed to sale.

The Metrc™ Compliance Management System allows a licensee to track all of the Marijuana inventory grown, processed, transferred and sold for either medical or recreational use. The Metrc system consists of a web application, web services, a mobile application for site inspection, and a mobile application for industry use. Metrc can integrate with other systems for retrieving information such as licensing or tax from Departments of Health or Revenue or third party systems through the use of the Metrc API.

The goal of the Metrc system is to:

- Capture perpetual inventory quantities for each Licensee.
- Track and record a chain of custody from “starter” plant to patient or consumer acquisition.
- Provide the inspection process with the tools necessary to complete onsite validation of inventory.
- Support the auditing process from a series of exception reports.
- Provide the industry with the means to report the required inventory events.

Life Cycle

The graphic below is what we call the Marijuana Life Cycle. This picture graphically depicts the scope of the Metrc system and how Metrc interacts with the industry. The intention of this slide is to help users understand how the Metrc system was designed and how each process is captured and moved through the industry.

The Steps

- 1 - Cuttings, seedlings, or clones are grouped and identified as an immature batch.
- 2 - An immature plant becomes a vegging plant when the plant is larger than 8" and/or in a container larger than 2". A unique RFID tag is assigned to the vegging plant.
- 3 - A vegging plant becomes a flowering plant when the light cycle changes to 12 hours on 12 hours off.
- 4 - Harvesting is the process of cutting down a plant and obtaining the wet weight before initiating the trim process. It is performed only on plants in the flower phase creating the harvest batch.
- 5 - Marijuana in the form of buds or shake/trim (by weight) may be packaged and sold or processed into hash or infused product. A Unique RFID label is assigned to the package.
- 6 - Packaged inventory is transferred to an infusing business by its own cultivation or from another selling business for the purpose of producing infused products.
- 6a - An infusing business will repack its infused product for transfer to a selling business. A

unique RFID label is attached to the package.

7 - Packaged inventory is transferred to a selling business by its own cultivation, another selling business or from an infusing business, for the purpose of selling inventory.

7a - A selling business will repack inventory for transfer to another selling or infusing business. A unique RFID label is attached to the package by the transferring business.

8 - A selling business will sell from packaged inventory.

Navigating in Metrc

Navigating in Metrc is similar to navigating in a traditional website. Metrc uses tool bars, drop down menus and only requires the use of a mouse to navigate and perform functional tasks. The two primary tools bars in Metrc run along the top of the site and in the upper right corner.

The long tool bar that runs along the top of the Metrc webs site has selectable areas for each of the fields in the tool bar. These fields will change based on the permissions a person has and the type of facility you are working in.

The Following Table Shows the permissions available by facility type.

	Producer OPC/Grow	Processor MIP	Retailer/Store or Dispensary	Testing Lab
Plants	✓			
Packages	✓	✓	✓	✓
Transfers	✓	✓	✓	✓
Sales			✓	
Admin	✓	✓	✓	✓
Reports	✓	✓	✓	✓

The Metrc system will work with Google Chrome, Internet Explorer and Firefox. Please verify your Web Browser settings prior to working in Metrc. Security and firewall settings may impact your performance in Metrc.

In the upper right hand corner, select a facility from a list of facilities. In this drop down menu, you will see a list of companies created by the Facility Admin shown in the picture below. While you are working in the Metrc system, you will need to be clear on the facility you are working in. In the Metrc system, each facility is a business in and of itself and operations are limited to that particular facility. As examples of this, a person working in Metrc should be aware:

- If you are an employee of a single facility, you will only see one option.
- If you are an employee of multiple facilities, you will need to select the facility you are working in.
- A medical business and a retail business are considered two different facilities, even if they are in the same building.
- The options in the navigation bar will be based on employee permissions and the facility type.

Also, note that additional kinds of hardware such as RFID reader devices and bar-code scanners are not required to work in Metrc. A standard mouse connected to your device is sufficient to perform all functional tasks in Metrc. Additionally, any PC, Laptop or tablet device with internet access can access the Metrc site.

Common Buttons in Metrc

1

Cancel button

The cancel button will cancel the operation prior to saving information in the field you are working in.

2

Add button

The Add buttons will add additional information fields like the addition of Employees, Packages or Items within their respective fields.

3

Clear button

The Clear button will remove all data fields from the menu you are working in, prior to completing the transaction.

4

Today's Date

The Today Button will enter the date for the day your computer is set to.

5

Page View

This function will show you the number of pages this area has available to use. It is used in conjunction with the items per page.

6

Items per page

The items per page will tell you how many items per page you are currently viewing. You can view 5, 10, 20, 50, 100 per page.

7

Viewing Indicator

The viewing indicator will tell you how many items you are viewing and how many are available to be viewed.

8

Filter

The Filter Button denotes a field you can search (See search function topic).

9

Drop-Down Arrow

The Drop-Down Area denotes a field that has more data available for viewing. Plants, Packages, Transfers are common areas where this feature is available.

10

Refresh

The Refresh Button is found in the lower left corner and will refresh the data on a page.

Logging Into metrc

Logging Into Metrc

Log In Screen

Please note, the State has made several rules with regards to who may and may not access the Metrc system. The regulations define many aspects of the responsibility of who is allowed in Metrc, what they are allowed to do while in the Metrc system and what they are responsible for when they have entered information into the Metrc system. The Metrc manual is a reference tool for those people who are lawfully allowed to actively use the system and have received proper credentials under the enforcement divisions rules and regulations. It is assumed that all users of the Metrc manual have read, understand and are compliant with these rules and regulations.

1

Username field

The user name is your badge number/handler's permit; without spaces. If you do not have a badge number/handler's permit or your badge number/handler's permit is expired, you will not be able to login to Metrc. Your badge number/handler's permit will be granted by the State.

2

Password field

Password requirements for Metrc, at least:

- 1 Upper case letter

- 1 Lower case letter
- 1 Number
- 1 Special character such as a dollar sign, pound or symbol

You are not limited to the number of each you use but must contain at least one of each of the required letters or symbols.

3

Log in button

Once you have entered your license number and password you will be able to log into Metrc.

4

E-mail Field

Email field is a required field, the email used must be the email on file with Metrc.

5

Can't access your account

Should you not be able to access your account, please enter your username and click this link to receive a password reset email.

Metrc Administrator

The roll of the Metrc administrator is to create all of the initial operational functions of a licensed business and make sure employees get training on the use of the Metrc system. Franwell provides ongoing training and support to supplement the business owners efforts. This includes a New Business/New Employee Training and an Advanced Metrc Class every week.

To assist the administrator, all of the administrative functions in Metrc can be delegated with the exception adding facilities. The addition of new facilities is the sole capability of the Metrc administrator.

To get started as a Admin in Metrc, a person can request Admin credentials after completing the Metrc New Business training program. Upon completion of training, a business owner should send an e-mail to support@metrc.com with the following information:

- The Name of the business and DBA if there is one
- The Business License number
- The Owners name
- The Owners badge number/handler's permit or last name and last four of owner's social security number
- A valid email address

The owner may also appoint another employee as their Key Administrator, however the owner must email support@metrc.com and provide the information above for that employee. However, the owner will need to be added in as a regular employee with full permissions.

The Franwell support team will provide an e-mail response with your credentialing response information. Email responses are generated within 24 hours of requests Monday - Thursday. Email requests sent in on Friday will be sent on Monday mornings. If an administrator calls the support desk with a Friday request, allowances can be made. This function is set because the security key generated by the Metrc system is only active for 24 hours.

All other Employees - login will be sent after your Metrc Administrator sets you up in Metrc as an employee; you will receive a welcome email. Check your email inbox for the welcome to Metrc email. If you do not receive this, check with your Metrc administrator; they have the ability to resend your welcome email at any time.

Welcome to Metrc email - Example

First Time Credentialing Example:

Within 24 hours of the time a Metrc administrator requests credentials, the requester will receive a "Welcome to Metrc" email from support@metrc.com and will have two links to the __.metrc.com website.

- The first link will redirect the Admin to the website and automatically add the security key into the login screen.
- The second link is provided to allow the user to create a short cut or web link for future use.

Please note:

- The email may be delivered to a persons junk, spam or trash folder or deleted outright because of individual security settings.
- The welcome email is only good for 24 hours and will then become invalid for security purposes.
- If you have trouble with your Metrc credentialing login, you may request another security key by contacting support@metrc.com.
- Please note the __.metrc.com will be replaced with your state url.

User Profile

The screenshot shows a 'Personal & Security Info.' form. Callout 1 points to the 'Enter email address' field. Callout 2 points to the 'Password' field. Callout 3 points to the 'Enter Personal Security Question' field. Callout 4 points to the 'Security Answer' field. Callout 5 points to the 'Phone Number' field. Callout 6 points to the 'Confirm password' field. The form also includes fields for 'Full Name', 'Email', 'Username', and 'Confirm Password'. There are 'Save Profile' and 'Undo Changes' buttons at the bottom.

1

Enter email address

john@gmail.com

A valid email address is required, it should be your own email of record for the company. Users should not use the same email address in Metrc.

2

Password

Password requirements for Metrc, at least:

- 1 Upper case letter
- 1 Lower case letter
- 1 Number
- 1 Special character such as a dollar sign, pound or symbol

You are not limited to the number of each you use but must contain at least one of each of the required letters or symbols.

3

Confirm password

The confirm password field is required to enter the password a second time when changing your password in Metrc.

4

Enter Personal Security Question

This is a security question of your choosing. The personal security question is one that you can answer if you cannot remember your password in order to get into Metrc.

5

Enter Personal Security Question Answer

The Personal Security Question Answer is the answer to your security question that will be used to get into Metrc should you ever forget your password. This is not a case sensitive area.

6

View Security Answer

☐

This feature can allow or not allow you to see the answer as you type it.

7

Phone Number

The Phone Number is your phone number, not your facility phone number.

8

Save Profile button

A green rectangular button with the text "Save Profile" in white.

When you have completed the questions, click the "save profile" button in order to complete.

9

Undo Changes button

A light gray rectangular button with the text "Undo Changes" in black.

Undo Changes button allows you to revert your information back to your previous information instead of what was just entered.

Administrator Initial Setup

Administrator Initial Setup

Admin - Initial Setup

Franwell has created a step by step process that will ensure a licensee captures all of the necessary requirements and information into Metrc. Setting up a facility in Metrc follows a logical process designed around the common business practices of the Marijuana Industry. When setting up your Metrc system, it is important to follow this process to minimize data input and maximize accuracy. Remember, all information created in Metrc is in a live system and subject to review by the State.

Facility Step by Step Setup Process:

- Receive Metrc Administrator credentials
- Add facilities
- Select facility
- For each facility add:
 - employees
 - strains
 - items
 - rooms (Grow/Producer)
 - patients (Dispensary/Retailer)
- Order tags for that facility
- Select next facility, return to previous step

All of the steps listed above are performed in the facility you are working in under the Admin Function of the tool bar and by the facility you are working on. By selecting the facility as shown in the figure A, you will be performing the task you select in figure B for that facility.

Figure A - Facility Selection Figure B - Task Selection

Please remember the facility you are working in is the facility in the black field. In the example shown in Figure A, the menu shows 1 OPC/Producer, 1 MIP/Processor and 2 Dispensary/Retailers. In this example, all tasks being preformed would be in the OPC1 403-0000#.

Set Up Facilities

1

Facility License Number

This is the facility business license number issued by the State . The location and contact information is provided by the State license software and cannot be changed or altered by Metrc.

2

Add button

Multiple facilities may be entered at one time. By selecting the add button, an Admin may add multiple facilities at the same time on this screen.

3

Home

Select a home screen for the facility. This will be the first screen that will appear for the Metrc administrator login. Selection of the home screen does not impact the ability to move within the different areas of Metrc; it is simply a function put in place to allow for easier or more convenient access for the user.

4

Clear button

The clear button allows you to erase all data entered and begin again if the user has a mistake.

5

Cancel button

Click this button to cancel your data entries, without saving, and exit the screen.

6

Add Facilities button

Click this button to save your data and exit.

Adding Facilities is a function that is uniquely required of the Metrc Key Administrator. Only a Metrc key administrator is allowed to add a facility and therefore a Metrc key administrator should complete the addition of all facilities before any other data is entered.

Editing Facilities

Renaming Your Facility

You will now be able to give your facilities an *ALIAS* name or nickname that will appear in the black dropdown facility box. To facilitate this function, we have added an “Edit Facilities” button in the Admin/Facilities screen.

Current Name	Legal Name	License No.	Type
ARROWFLO LLC	ARROWFLO LLC	403-FLO1	OPC
Arrowflo Store 2	ARROWFLO LLC	402-FLO2	MMC Type 3
Arrowflo Cultivation	ARROWFLO LLC	212-FLO3	Retail Cultivation
Arrowflo Store	ARROWFLO LLC	211-FLO4	Retail Store

Page 1 of 1 20 items per page

This nickname feature will only be visible to you and those employees with *Metrc* access within your facility. Transfer manifests will continue to show the legal name only.

Instructions on Changing Your Facility Name

You can change your facility name by selecting Admin/Facilities from the top navigation menu, then highlight the facility you want to rename and click Edit Facilities Name button. You can also just click the Edit Facilities Name button and use the Facility dropdown box, on the left side of the form, to select the facility you want to rename.

Next, type in the alias/nickname you would like to use for this facility and click the green Save Names button.

Note: The Legal name box on the right side of the form is populated with the legal name in the State licensing database. If you decide to go back to the legal name at any point, simply click on the “Set as Current” box.

The Trade Name box will be used in the future to show the DBA name associated with your legal name. For now, this will be unused.

Employees

A Medical/Recreational Marijuana Business may designate licensed Owners and employees who hold a valid Occupational License/Handler's Permit as a Metrc user. A Medical/Recreational Marijuana Business shall ensure that all Owners and Occupational Licensees/Handler's Permit Holders who are granted Metrc User account access for the purposes of conducting inventory tracking functions in the system are trained by Metrc Administrators in the proper and lawful use of Metrc.

A Marijuana Business is accountable for all actions employees take while logged into Metrc or otherwise conducting Marijuana Business or Marijuana-Infused Product inventory tracking activities.

Activating an employee in the Metrc system is very similar to the process the Metrc key administrator performed. An employee will be added and will receive a credential just as the Administrator. Each employee will receive an email and a link for their first time login to Metrc.

The Metrc system provides the following functionality:

How to enter employees in Metrc include:

- Permissions
- Home
- Welcome Email
- Add an Employee
- Edit an Employee
- Lock an Employee
- Unlock an Employee
- Disable an Employee

When adding an employee, it will be necessary to add permissions that an employee will use to perform tasks in the Metrc system. Employee permissions include:

- Administration - Provides the capability to perform all administrative, plants, packages, transfers and sales tasks. Except adding facilities.
- Plants - Provides the capability to create, move, change phase and create harvests in Metrc.
- Packages - Provides the capability to create, adjust and re-package packages into smaller or larger quantities.
- Transfers - Provides the capability to create, receive, modify or delete transfers.
- Sales - Provides the capability to input sales data or initiate sales uploads.

A Medical/Recreational Marijuana Business and its designated Metrc Administrators and Metrc user(s) shall enter data into Metrc that fully and transparently accounts for all inventory tracking activities. A Medical/Recreational Marijuana Business is responsible for the accuracy of all information entered into Metrc.

Employees Screen

1

Add Employees Button

Add Employees

Add Employees Button is used to add employees with badges/handler's permits as a user to Metrc.

2

Edit Employees Button

Edit Employees

Edit Employees Button is used to access an employee profile should you need to edit it.

3

Lock Button

Lock

Lock button is used to temporarily lock an employee's access to login to Metrc. (An owner may not lock another owner in Metrc.)

4

Unlock Button

Unlock

Unlock Button is used to allow access to a previously locked employee.

5

Status Bar

Employee No. Last Name First Name Email Type Disabled Expires Home Manager Works Locked

The Status bar shows all of the relevant information about an employee. The status bar also shows important information about an employees badge number/handler's permit status. Each field is able to be queried by the different parameters of their information.

6

Disable Button

Disable

Disable Button is available to be used when you need to remove an employee from the

license. Upon disabling an employee they will no longer have access to that facility.

7

All Button

All Button is available to be used when you need to remove an employee from all facilities they are registered with. Upon disabling an employee, through the all button they will no longer have access to Metrc.

8

Items Per Page

This area will increase or decrease the number of item views per page and shows the number of pages needed to show all items.

9

Items to Display

Items to Display will show you how many total number of items that fit your filtered criteria.

10

Refresh Button

The Refresh Button will help you refresh your filtered criteria up to the moment.

Add Employee

The screenshot shows the 'Add Employees' form with the following callouts:

- 1** Employee License Number: Points to the 'Employee License Number' field.
- 2** Permissions: Points to the 'Permissions' section on the right.
- 3** Additional Locations: Points to the 'Additional Locations' section on the right.
- 4** Email: Points to the 'Email' field.
- 5** Home: Points to the 'Home' dropdown menu.
- 6** Employment Field: Points to the 'Employment' dropdown menu.

The form includes a 'Create Employee' button at the bottom left and a 'Cancel' button at the bottom right. A 'Please note' section provides instructions for granting online access.

1

Employee License Number

This is the badge number/handler's permit given by the State. Only validly licensed employees may be authorized to work in Metrc. If a badge expires, an employee will be locked out until his badge has been renewed.

2

Permissions

Select by check mark, in each box to allow the employee access to Metrc in the following menus - plants, packages, transfers, administration. This selection will vary depending on the "facility" type you are adding the employee to, the access to information you want the employee to have and the functions the employee will be performing in the system. In the Dispensary/Retailer, you will see an additional "sales" permissions box instead of the "Plants" permissions box. These can be edited as an Administrator deems appropriate.

3

Additional Locations

☒ 10th street | 403-X0001
☐ CO Lofty Med-Cultivation B | 403-X0002
☐ CO Lofty Med-Dispensary | 402-X0001
☐ CO Lofty Rec-Cultivation | 403R-X0001
☐ CO Lofty Rec-Store | 402R-X0001
☐ CO Mishmash Med-Cultivation | 403-X0003
☐ CO Mishmash Med-MIP | 404-X0001
☐ CO Mishmash Rec-Cultivation | 403R-X0002
☐ CO Mishmash Rec-MIP | 404R-X0001
☐ CO Perceptive Labs | 405R-X0001

Additional locations will allow you to check the locations you would like to enter an employee into. You can select individual ones or select the check all box to enter the employee into all locations. Please remember that utilizing this ability will allow the permissions you chose for this employee to be the same for each location you check.

4

E-mail

For Security purposes, it is best to enter a unique employee email in this field. This is where the employee will receive their "Welcome to Metrc" login credentials.

5

Employment Field

Employment ☐ Manager at this Facility

Employment Field is to show whether the employee is a manager at the location.

6

Home

Select the "Home" screen for your employee. When they login to Metrc, the home screen selection will be where that employee is directed upon successful login into Metrc. The home screen does not affect the employees ability to move from screen to screen.

7

Add button

Allows you to enter multiple employee entries from this screen.

8

Create & Save Employees button

 A green rectangular button with the text "Create Employees" in white.

Click on this button to save your work.

9

Cancel button

 A light gray rectangular button with the text "Cancel" in black.

Click on this button to exit the screen, without saving.

Additional Notes on employees:

- An employee will only be added to the facility they are requested in. Employees will need to be individually added to each and every facility they will be working in uniquely.
- As a best practice you should only add badged employees to a facility that you want to allow the ability to enter data into Metrc.
- The permissions that you grant the employee will determine which menu's they will have on their tool bar, when logged into Metrc.
- The home screen selection is the first screen the employee will see after successful login to Metrc.
- Be sure to get a valid "unique" email address for an employee to receive the credentialing "Welcome to Metrc" email link.
- The Metrc administrator needs to instruct the employee that the occupational license number (badge/handler's permit) is their login ID (not their email address). Login ID cannot be changed or modified, it will always be the badge/handler's permit number.
- As with the Admin credentials, the "Welcome to Metrc" email link expires in 24 hours. If an employee fails to log in within the 24 hour period, the Metrc administrator can go in and edit the employee and click the "Resend Welcome Email" box to resend another temporary log in to the employee's email.

Edit Employees

1

Edit Employee

Metric allows an Admin to edit an employee. All of the fields used to create an employee can be edited from the "Edit Employee" screen.

2

Enable Online Access

☒ Enable online access to this Facility

Enable Online Access will allow you to remove online access or grant online access to an existing employee.

3

Email field

E-mail

Email field will allow you to edit an employees email address. If you are enabling access for the first time an email address is a required field.

4

Resend Welcome E-mail check box

☐ Resend Welcome E-mail

An employees "welcome to metric" credential email is similar to the Admin email, it will expire within 24 hours of the time it was issued. If your employee did not activate, or receive their login credentials it will need to be resent. Simply select the "Resend Welcome E-mail" check box and select save employee button. This will resend the "welcome to metric" E-mail.

5

Home Field

 A screenshot of a web form showing a dropdown menu labeled 'Home'. The dropdown menu is open, displaying the text '- Select Home -' with a small downward arrow on the right.

Home field will allow you to choose the home field for the employee. This is the landing page where the employee will start at each time they log in.

6

Employment Field

 A screenshot of a web form showing a checkbox labeled 'Employment' which is checked. Next to it is the text 'Manager at this Facility'.

Employment field will allow you to show who is a manager at the facility.

7

Permissions

 A screenshot of a web form showing a section titled 'Permissions'. Below the title are six checkboxes, each with a label: 'Plants', 'Packages', 'Transfers', 'Financials', 'Reports', and 'Administration'. All checkboxes are currently unchecked.

Permissions will allow you to change the permissions the existing employee has access to.

8

Save Employees button

 A screenshot of a green rectangular button with the text 'Save Employees' in white.

Click this button to save your work and exit.

9

Cancel button

 A screenshot of a light gray rectangular button with the text 'Cancel' in black.

Click this button to exit without saving.

Remember:

- When you edit an employee's e-mail address it will update in all facilities that employee is assigned to.
- When editing an employee's permissions those changes will only be reflected in the facility the Admin is editing in.

Lock Employee (by Facility)

1

Employee Lock Lock # 1

The Employee lock feature is to allow the Admin to temporarily lock and employee in a facility. Locking an employee will prevent them or someone else from accessing their information and entering data into the Licensees Metrc account. As an example of when an Admin may choose to use the lock feature would be in the case of a leave of absence such as maternity leave or an employee vacation. One owner cannot lock another owner out of Metrc at any time.

2

Clear button

Use this button to wipe out any entries in the field and begin again.

3

Employee Selection

You select an employee to lock, either by drop down or highlighting the row from the previous employee listing.

4

Lock Employees button

Use this button to lock employee by facility.

5

Cancel button

Use this button to cancel all entries and exit the screen.

Remember:

- This feature as with most in Metrc is by facility. You must lock an employee in each facility you want them locked in.
- Locking an employee in one facility will not lock them in all facilities.

Unlock Employees (by Facility)

1

Unlock Employee

Unlock # 1

The Employee unlock feature allows the Admin to unlock an employee that has been temporarily locked in a facility. Unlocking an employee will restore the employees ability to perform the functions they were originally granted by the Metrc Admin.

2

Employee Selection

Select the previously locked employees from this drop down menu.

3

Clear button

Use the clear button to clear this form and begin again.

4

Cancel button

Use this button to exit the screen without making any changes.

5

Unlock Employees button

Use this button to unlock previously locked employee users, save and exit.

Disable an Employee

1 Disable Feature

Disable

The Disable feature should only be used when an Administrator wants to permanently remove someone from a facility. The Disable feature will not remove them from every facility, only the facility the Admin currently has specified.

Examples of when to use the disable feature:

- When terminating an employee
- When an employee will be no longer working in a facility

Please Note:

- You will be prompted before Metrc will disable the employee.
- A disabled employee can be added back as a new employee.
- Disabling an employee will not erase the tasks they performed previously in Metrc.

Rooms Function (OPC/Producer Only)

A room is designed to be a physical location to identify where plants are located in a particular growth phase. The room does not necessarily need to be a room but may also be a location within a given room. As an example, if an OPC/Producer is small and only has one room it may classify multiple areas of a room such as "Row 1, Row 2, Row 3". An additional example, a large OPC/Producer that may have a large room holding several phases of plants of the same strain may choose to use "Veg Room Section 1, Veg Room Section 2, Veg Room Section 3" to provide a specific location for a group of plants of the same strain in a different phase in a single room. As one final example, a group of plants may change phases in the same room and the room continues to change phase making the room and the plants track together up and through the harvest phase. In this case, a room can almost act as a batch.

When setting up your rooms, it will be important to keep in mind the ability to move plants by room and phase. The Rooms function provides an easy way to move plants in large volumes and the room feature can assist in minimizing the efforts in these moves. Rooms can be added, deleted or edited very easily and as often as desired.

1

Add Rooms button

Add Rooms

To add a room simply select the add rooms and a new window will open.

2

Edit Rooms button

Edit Rooms

Your room name can be any "location" name that you would like to utilize.

3

Room Name List

This list will show you all of the rooms currently located in your Metrc system.

4

Discontinue button

Use this button to permanently remove a room from your list.

The following graphics show two concept layouts of how rooms could be laid out in Metrc to work with the Changes by room function.

Figure 1Figure 2

In figure 1, we have a scenario where a single room houses multiple strains of vegging plants. In figure 2, we have two strains in two different phases. In Metrc, we would use the add / edit rooms feature and create the rooms to match. It is permissible in Metrc to create rooms to match a facilities operations.

Adding Strains

The screenshot shows the 'Add Strains' form with the following elements highlighted by numbered callouts:

- 1** Strain Name: Points to the 'Name' input field.
- 2** Testing Status: Points to the 'Testing Status' dropdown menu.
- 3** THC and CBD Content: Points to the 'THC' and 'CBD' input fields.
- 4** Indica vs. Sativa: Points to the 'Indica' and 'Sativa' sliders.
- 5** Indica vs. Sativa: Points to the 'Indica' and 'Sativa' sliders.
- 6** Create Strains button: Points to the 'Create Strains' button.
- 7** Cancel button: Points to the 'Cancel' button.

1

Strain Name

Name

Enter the strain name of all strains you currently grow in your facility.

2

Testing Status

Testing Status

In this area, a Licensee will define whether or not product has been tested and if so was it done in-house or by a third party .

3

THC and CBD Content

THC¹

CBD

This is where THC and CBD content of a particular strain is entered. This is a 2 year average of the testing of this strain.

4

Indica vs. Sativa

This is where a Licensee will indicate the level of Sativa vs Indica that makes up the

origin of a plant. Again, this is a 2 year average of the testing of this strain.

5

THC Potency Info

1. Please report THC potency as a percentage of the overall weight.

This means that if a particular strain tested as having 15% THC potency, then every gram of dried flower of that strain has 0.15 grams of THC.

The reality is that potency can drastically change even between a single plant or from plant to plant. So, the percentage that the MED would like input into Metrc would be the average potency percentage from all tests in the prior two years. If no tests have been conducted please use your best estimate.

6

Create Strains button

Select this button to save entered data and create strains.

7

Cancel button

You may select the cancel button to exit the screen without saving any changes.

Edit Strains

Metrc allows you to edit a strain that has already been added to your system. If a strain name has changed or been modified or if a strain has new test data the edit feature can be used to update the information.

Edit Strains

Strain # 1

Strain: CBD Yummy Testing Status: None

Name: CBD Yummy THC%: 0.1156 CBD: 0.0975

Indica: 0 25 50 75 100

Sativa: 0 25 50 75 100

1. Please report THC potency as a percentage of the overall weight.

This means that if a particular strain tested as having 15% THC potency, then every gram of dried flower of that strain has 0.15 grams of THC. The reality is that potency can drastically change even between a single plant or from plant to plant. So, the percentage that the MED would like input into mits would be the average potency percentage from all tests in the prior two years. Adding Items

When adding items into Metrc, please keep in mind:

- Item names are used to identify what type of item is packed into a Metrc package.
- Item names should not be just a category name, it should be item specific to what is in a Metrc package.
- Items in Metrc allows each industry facility to have their own item names.
- Each facility creates its own items individually by facility.
- Each item requires a category selection and these categories are setup by the State. The purpose of categories is for reporting like items as groups.
- Your items will identify what is in the package. These items will identify what category the items belong in.
- The package items names will be created by the facility that packages and transfers the item(s). Whichever facility packages an item, will provide the name for it. It will retain that item name, unless you re-package it.

• Item Categories are defined by the State, refer to your State Supplemental to find the specific categories that have been setup by your State.

Add Items

The screenshot shows the 'Add Items' dialog box. It has a title bar with a close button. Inside, there's a section for 'Item # 1' with a '(clear)' button. Below this are two input fields: 'Name' and 'Unit of Measure' (a dropdown menu). Below these are two more dropdown menus: 'Category' and 'Unit of Measure' (another dropdown menu). At the bottom left is a blue '+' button labeled 'Add More Items'. At the bottom right are two buttons: a green 'Create Items' button and a grey 'Cancel' button. Numbered callouts point to: 1. 'Add Item's Name' (points to the Name field), 2. 'Unit of Measure' (points to the Unit of Measure dropdown), 3. 'Add More Items' (points to the '+' button), 4. 'Category' (points to the Category dropdown), 5. 'Create Items button' (points to the green button), and 6. 'Cancel button' (points to the grey button).

1

Add Item's Name

Name

This is where you will enter the Items Name. You will need to enter items for the categories below. For those items in bold, you will need a unique item for each strain. (IE: Buds-Blue Dream).

2

Unit of Measure

Unit of Measure

- Select -

The unit of measure will be determined by the category selection above. Depending on the Category selected, the weights will be required, please refer to your State Supplemental for your State's required categories.

3

Add More Items

Select this button to add multiple items from this screen at one time.

4

Category

Category

- Select -

Select a category for each item, please refer to your State Supplemental for your State's

required categories.

5

Create Items button

Click this button to create items, save your work and exit.

6

Cancel button

You may select the cancel button to exit the screen without saving any changes.

Edit Items

1

Edit Items

Item

The Edit Items feature allows a user to change or modify a specific item that has already been created. By using the pull down menu the user can select the item they choose to modify. All of the fields can be changed or modified. The user may also select the item in the item list and then select the edit item feature and it will automatically populate the item in the name field.

2

Edit Name

Name

This is where you may edit the items name.

3

Clear button

The clear button will remove all entries from each field.

4

Edit Unit of Measure

Unit of Measure

This is where you can alter the unit of measure. You may not be able to change the unit of measure if the category you are using has restrictions on the unit of measure (IE edibles - each only).

5

Edit Strain

 A screenshot of a web interface showing a dropdown menu for 'Strain'. The menu is open, and 'Purple Kush' is selected. There is a small downward arrow icon to the right of the text.

Use the edit strain drop down menu of available strains for selecting the strain the item is associated with. A strain is not required for use with all items. As an example infused products do not require a strain, although a licensee may choose to do so. Some products do require the association of a strain such as buds. Specific questions about strain dependency should be referred to the MED or rules and regulations documentation provided by the MED.

6

Edit Category

 A screenshot of a web interface showing a dropdown menu for 'Category'. The menu is open, and 'Buds' is selected. There is a small downward arrow icon to the right of the text.

You may change the category the item is associated with. You cannot change the category for an item if you have already created packages using that item. You will have to discontinue that item and create a new item with the desired category. Please refer to your State Supplemental for your State's required categories.

7

Save Items button

 A screenshot of a green button with the text 'Save Items' in white.

When you have completed the modifications to the item you can save your changes by selecting the save changes button.

8

Cancel button

 A screenshot of a gray button with the text 'Cancel' in black.

Using the cancel button before selecting the save button will revert the item back to its original state.

Add Patients (Medical Dispensary Only)

The add patients field is only used by a Medical Dispensary. Recording a patient's number is used to reconcile plant count vs the number of patients a medical dispensary is allowed to grow for. No other information about a patient is stored or accessed by Metrc. Metrc is not connected to any other systems that store or maintain patient information.

Please, keep in mind, you can not enter temporary cards or temporary patients into Metrc. Metrc only allows you to enter patient or plant information for a patient with an active license number and should only be added if they are registered to your facility.

The screenshot shows the 'Add Patients' form with the following fields and buttons:

- 1** License No. (text input field)
- 2** Recommended Plants (text input field with value 6)
- 3** Date License is Granted (calendar icon)
- 4** Recommended Amount (dropdown menu with value Ounces)
- 5** License Expires (calendar icon)
- 6** Register Date (calendar icon)
- 7** Register Patients button (green button)
- 8** Cancel button (grey button)

1

License No.

License No.

The license number field is where a patient's number is entered. The patient number is entered without spaces.

2

Recommended Plants

Recom'd Plants

The Recommended Plants field is where a user will enter the recommended plant count that is recommended by the Dr. This number will ultimately affect the number of plants a Cultivator/Producer will be able to grow, so please enter this information carefully.

3

Date License is Granted

Lic. Granted today

Enter the date the patient's license was granted.

4

Recommended Amount

Recom'd Amnt Ounces

Enter the amount of product a patient can purchase, as recommended by the Doctor.

5

License Expires

Lic. Expires 

Enter the date the patient's license expires.

6

Register Date

Register Date

This is where you enter the date the patient registered with your dispensary.

7

Register Patients button

Click this button to register and save the patient data, before exiting the screen.

8

Cancel button

Click this button to exit the screen without saving any data.

Remember

- Patient ID numbers are only used in reference to plant count
- Metrc will not automatically delete a patient. If a facility chooses to delete patients, they will need to do this manually.
- Metrc is not tied to any patient registry or database.

Edit Patients (Medical Dispensary Only)

The screenshot shows the 'Edit Patients' window with the following fields and buttons labeled with numbered callouts:

- 1**: Edit Patient Number (points to Patient field)
- 2**: Edit Recommended Plants (points to Recom'd Plants field)
- 3**: License No. (points to License No. field)
- 4**: Edit Recommended Amount (points to Recom'd Amnt field)
- 5**: Edit License Granted field (points to Lic. Granted field)
- 6**: Edit Date field (points to Register Date field)
- 7**: Edit License Expiration field (points to Lic. Expires field)
- 8**: Update Patients button (points to the green 'Update Patients' button)
- 9**: Cancel button (points to the 'Cancel' button)

1

Edit Patient Number

Patient

Do not edit a patient's number if they get a new patient card. You must discontinue that patient and enter them as a new patient with the new patient number.

2

Edit Recommended Plants

Recom'd Plants

Edit the recommended plants a patient is allowed to have grown for them.

3

License No.

License No.

License No. is where you enter the patient's License number which can also be the same number as their patient number.

4

Edit Recommended Amount

Recom'd Amnt

This will Edit the recommended amount of product a patient can purchase and the unit of measure.

5

Edit License Granted field

Lic. Granted

This field will alter the date the license was granted to the patient.

6

Edit Date fieldRegister Date 12/30/2013 

Enter edits to the registration date.

7

Edit License Expiration fieldLic. Expires 06/28/2014 

The will alter the expiration date of the patient's license.

8

Update Patients button

Click the button to update patients and save the data, before exiting the screen.

9

Cancel button

Click this button to exit the screen without saving edits.

RFID Tags

The requirement for the tagging of plants and packages is derived from the rules and regulations that govern the Marijuana industry. The need for the tag is to provide a unique identification number for each plant and package created in the Metrc system. By providing these unique numbers Metrc creates a chain of custody from the origination of the plants through to the final sale. Attaching the unique numbers is a common practice in many industries where a chain of custody is required. In fact, many of the features of the Metrc system were developed in the food service and pharmaceutical industries where patient safety and having the ability to perform recalls if necessary are strong considerations. Because the RFID tag has a unique ID number for each plant and package and coupled with Metrc event history, the ability to monitor the movement and contact history of each and every tagged item allows the oversight required for the rules and regulations.

The RFID component

The RFID tags used in the Metrc systems are referred to as a commercial off the shelf (COTS) product. These RFID tags are governed by the EPC (Electronic Product Code) Class 1 Gen. 2 protocol under the ISO18000 part 6. The RFID tags themselves are programmed by Metrc when a customer places an order and specifically assigned to that facility. This is why each facility must place orders individually for that one and one facility only. Tags can not be moved or reassigned. By following this process, the chain of custody becomes very strong and reduces user error by eliminating the need for a user to enter ID numbers into the metrc system.

The RFID tag is made up of several components, the RFID chip, the antenna the chip uses to send and receive it's unique ID number with the substrate the RFID tag is attached to. This assembly is referred to as a RFID inlay and shown in the figure below.

There are two types of tagged inventory in Metrc; Plants and Packages.

The Plant Tag

The Plant Tag is used to track the plant from the immature phase through to the harvest. A clone or seedling is not tracked due to the high degree of loss normally associated to that particular growth phase. Plants are immature, vegetative, or flowering. All plants must enter the system through immature plant batches.

The plant tag has the following information printed on the tag:

- The Application, either Medical (Yellow) or Retail (Blue)
- The facility name
- The Business License number
- The Tag order date
- A UCC 128 bar-code that matches the ID number programmed on the RFID chip and the human readable ID number printed on the front
- The unique 24 digit ID number for the plant
- The MED seal on the back

The plant tags have the RFID inlay imbedded in between two layers of UV, water and smudge resistant materials to allow the tag to withstand the environment required for the plant to grow in.

The Package Tag

Packages are created for immature plants, harvest batches or other packages. Package tags are RFID based as well. The package tags are standard pressure sensitive labels and also come on Medical (Yellow) and Retail (Blue) versions.

The package tag has the following information printed on the tag:

- The Application, either Medical (Yellow) or Retail (Blue)
- The facility name
- The Business License number
- The Tag order date
- A UCC 128 bar-code that matches the ID number programmed on the RFID chip and the human readable ID number printed on the front
- The unique 24 digit ID number for the plant

Remember:

Tags are ordered in Admin for each facility

Plant and Package tags are available (and required) in a Cultivator/Producer.

Package tags are the only tags used in an MIP/Processor, Wholesaler, Medical Dispensary or Retail facility

You will need package tags on ALL product that is transferred out of a facility. Transfers can not be created without the identification of the package ID number.

All tags (both plant and package) are loaded in to your Metrc account and packaged when shipped in numeric order. The labels will be delivered in corresponding order to how they show in your account.

It is a good idea to remove and verify the tags you are using on a plant or package correspond to what you are tagging.

Plant Tag & Attachment

The plant tag was created specifically for use with the Marijuana plant. The material composition is designed for a wet high UV environment. The plant tags come in sequential order and are placed into the shipping box in a fan folded format that matches the order they will be received in your Metrc account. Tags are perforated and have die cut holes to place the tag attachment device through. The following pictures and accompanying instructions demonstrate how the tags are to be used with the different growth phases in the plants growth cycles.

Step 1 – Open the perforated holes in tag

Step 2 – Attach Strap through 1st hole

Step 3 – Attach Strap through 2nd hole

Final Assembly

Because of the nature and size of the immature plants physically attaching the tag to the plant would not be feasible therefore the pointed end of the attachment device was created to insert into the growth medium as shown in the picture below.

Once the immature plant moves into the Veg stage and becomes large enough to support the tag, the assembly can be adjusted to physically attach to the plant.

Step 1 - Remove one end of the strap from one hole

Step 2 - Wrap the Strap around a supporting branch of the plant

Step 3 - Attach Strap into the locking mechanism

Plant Tag Strap User Instructions

Push the tail-end of the strap through the lock until you hear one click sound and the knot goes through the lock completely to secure it for the first use.

When you want to re-use the strap, push the strap until there is enough space to clip above the first knot. Avoid pressing too hard and allowing the second knot to go through the lock.

Cut the strap as shown in the picture. This will release the strap.

When you are ready to tie the strap again, similar to first usage, push the tail-end until you hear one click sound or see the knot at the end.

5 You can repeat the steps 2-4 to re-use the strap 2 more times.

To be able to release the strap from the last lock, you have to cut the strap from its body.

Package Tags

A package tag is defined as any amount of marijuana or marijuana infused products that may be sold, processed or transferred and must be placed into one or more containers, each container having its own unique RFID tag. This includes but is not limited to all bud, shake and infused products and or concentrates. Any product you intend to transfer must have a package tag.

The Package Tag is perforated with the upper and lower information being the same.

The Package tag breaks into 2 pieces:

- The larger portion stays with the original package or container.
- The lower portion can be attached to another device such as a container at retail or on intake paperwork at a MIP/Processor or Testing Lab.

Tag Orders

Ordering Tags in Metrc is a simple process however it is very important to pay close attention when placing your order. Once a tag order is submitted it can only be canceled before 10pm MST on the day that you place the order. Metrc tags are custom printed for each facility and as such can not be returned once the printing process has begun and are non-refundable; so it is strongly advised that you be sure orders are placed for the correct facility, amount and type of tags required.

Additional notes about tag ordering:

- Tags are ordered from the Admin function
- Tags can be ordered via Credit Card, check or money order
- Payment information is not required to be the licensee or the business owner
- Each facility must have billing information entered. You can choose to ship to a different location (No PO Boxes)
- Tags will be sent by UPS
- Tag cost .45 plant & strap or .25 package
- You can request expedited shipping if you would like. UPS Air (1-3 business days) or Overnight as well as Saturday delivery are available at your expense. Please contact the support line at support@metrc.com or 877-566-6506 to expedite your tag order.

Taxes	---
Total Amount	---

Totals Area lists all totals for Shipping/Handling, Taxes and Total Amount including Tags, Shipping/Handling, and Taxes combined.

12

Credit Card Option

Credit Card Option is used to choose to pay for your tag order with a credit card. This includes Visa, MasterCard, Discover, and American Express.

13

Check or Money Order option

Check or Money Order Option is used to choose to pay for your tag order with a credit card. When this option is clicked, the address where to send your payment to is shown.

14

Include a note

Include a note field is not a field that is used at all at this time. Please do not include any notes.

15

Note

Please note:
 You MUST place separate tag orders for EACH facility. Because the RFID Plant and Package tags are programmed for each of your facilities individually and placed within your Metro account, make sure that you are in the correct facility with mits when you place the order. Tag orders are NOT transferrable between facilities.
 Once the order has been programmed and assigned for a facility it cannot be reprogrammed or reassigned.
 All tag orders are final, so we recommend that you place your orders carefully.

Note is used to give important information regarding tag orders for all facilities.

16

Place Order button

Place Order button is used to actually place the tag order for a specific facility.

17

Cancel button

Click this button to exit the screen without saving any data.

1

Current/History Tab

Current History

Current Tab is used to show current tag orders that have been placed but not yet received. By selecting the History tab you will be directed to a screen where you can see all activity for previous orders that have been received.

2

Historical Information

Order Number	Date	Status	Total	Paid	Tracking Number	User
--------------	------	--------	-------	------	-----------------	------

Included in the History is the Order Number, Date, Status, Price, Tracking Number and the person who placed the order.

Receiving your Tags into Metrc

A facility will not automatically receive the tag ID's into their system after placing an order. After tag orders are placed and shipped the tag ID number will become available. The indicator for the ID number availability is when a user can see the "Receive" button visible in the tag order screen. This is a security feature to prevent the tags from becoming diverted or used by anyone other than the licensee who ordered the tags.

1

Receive button

Receive

Select this button to populate tag ID numbers into the system. The receive button will be visible on the left side of the screen that corresponds to the order number. After selecting the receive button you will see a final confirmation window prompt similar to the picture below.

Plants

Plants

Plants

This Metrc process was developed with the State and businesses within the industry. The following image was created to graphically depict the the growth cycle from seed or clone through the harvesting process. The image shows the scope of the Metrc system and how Metrc interacts with the industry. While there are many variations in the way individual companies grow and harvest, this process captures the most common stages and functions used by the vast majority of the industry. The graphic is used to help the users of the manual to understand the plant steps in this chapter.

The Metrc system is a reporting system with a chain of custody. This chain of custody begins with the seedlings or clones. The two key terms people need to keep in mind are “reporting” and “chain”. From the immature plant all the way to the final transfer received at the Medical Dispensary/Retailer, you should always be able to track a product from one ID number to another. If you cannot see a connection from one point to another, the chain is broken and the process is incorrect. Please see the graphic below.

The only place where a Metrc tag does not represent a point in the process is at the

Cultivator/Producer in the Harvest batch. The harvest batch does not have a tag but still has an ID. The harvest batch ID, as you will see is assigned by the Cultivator/Producer or Metrc will assign it automatically. The harvest batch ID connects the plant ID number to the package tag ID number. In this way, we have connected all of the points of the chain together and can track from one point to the next. Because of this chain, Metrc allows the person(s) handling the plant, batch or package to “report” on the movement of the product from one stage to the next. Remember, a harvest batch MUST be strain specific (One Strain). In this way, the harvest batch is a many to one relationship. The harvest batch is also a one to many relationship with 1 harvest batch equaling many packages.

Navigating in Plants

Navigating in the Plants section is similar to navigating the other sections of Metrc but the plant section has multiple phases each with features that are both common and unique to that particular phase. It is important to note that the plants section of Metrc has been setup to follow all of the applicable rules and regulations and also trying to minimize data entry.

1

Navigation Tool Bar

The Navigation Tool Bar will show you the Plants option. Plants will only be accessible from an OPC/Producer License type. Plants are not available from an MMC/Dispensary, MIP/Processor or Wholesaler facility.

2

Phase Tabs

The Plants Tabs will provide you with the tabs to access the functions required to handle plant and plant movement by phase. The Immature tab will provide the functions necessary to create seedlings and clones while the remaining tabs will handle the specified phases.

3

Immature Buttons

Each section has multiple functions with buttons that are both common and unique to that particular phase. Not all of these functions may be necessary each time you enter information about a plant.

4

Field Indication Bar

The field indication bars show you the information associated to that field. A field can be searched when you see the filter button as shown above and can also be sorted by ascending or descending order.

5

Facility IdentifierA screenshot of a dark rectangular box with white text that reads "AK Lofty Rec-Producer A | 4a-X0001".

AK Lofty Rec-Producer A | 4a-X0001

Shows you the facility you are currently working in.

Remember

- ALL package(s) from a Harvest Batch is created from the Harvested Tab.
- Always verify you are performing functions in the facility you intend to.

Immature Plants

The Immature Plants phase is the first phase of the growth cycle captured in the Metrc system. Cuttings, seedlings, clones or seeds are grouped and identified as an immature batch, strain specific. An immature plant becomes a vegging plant when the plant is larger than 8" (tall or wide). A unique RFID tag is assigned to the vegging plant.

The Immature Plants phase in metrc is captured with the following 4 functions:

1

Create Plantings

Create Plantings

Select the Create Plantings Button when you are ready to create plantings of immature plants. Each planting is strain specific. We suggest that you include the strain name (or abbreviation) and the date the planting was planted.

2

Create Packages

Create Packages

The Create Packages button is for when you are creating a package of immature plants or seeds to transfer to another facility. All packages of Immature Plants are strain specific.

3

Change Growth Phase

Change Growth Phase

Changing Growth Phase button is used when an Immature Plant(s) is/are ready to be moved from the Immature Phase to the Vegetative Phase of growth. This can be done

individually or as a group.

4

Destroy Plants

Destroy Plants button is used when an Immature Plant(s) ceases to be a viable plant and needs to be destroyed in metrc.

Each of the tabs shown above have specific features and functions and have been broken down individually for easier access and review.

Create Plantings

The first step in the cultivation and harvest process begins with the seed or clones from which the plants are created. Seedling or clone plants are prone to a high degree of loss during this particular phase of the growth cycle. Because of the large number of failures of these plants it was determined placing the RFID tags on plants during this phase was not a suitable option. It was determined that creating a batch of plants at this phase would prove to be the most suitable answer. When you first select plants from an OPC/Producer, you will be taken to the Plants page. From the immature tab you will select the create plantings button.

A new group of seed or clone plants can only be created from an OPC/Producer. When a user selects his OPC/Producer license he/she can proceed to the plants section. From the plants section select the create planting button and the form below will launch. The planting batch will be used to track the plants until they are able to move to the immature phase.

Name	Strain	Type	Plant	Live	Packages	Harvested	Destroyed	Change Package	Origin Plant	Create Date
Super Strain OG Kush 8/11	Black Death	Clone	1	0	0	0	0			11/10/2019
Super Kye 10006	Super Kye	Clone	8	2	0	0	0			11/09/2019
AK-27 110116	AK-27	Clone	8	0	2	0	0		AK-27 110116	11/09/2019
Flu Seed 4100206	Flu	Seed	5	107	10	0	0			04/10/2020
Water Blue Seed 1002019	Water Blue	Seed	38	100	0	11	2			04/03/2019
AK-47 Clone 0230201	AK-47	Clone	1	100	0	0	0			12/05/2019
Jack Herer Seed 12190201	Jack Herer	Seed	10	112	0	0	0			12/16/2019
Golden Oak Seed 1119019	Golden Oak	Clone	38	107	0	0	0			11/09/2019

The planting name can be defined by the licensee in whatever way is most suitable for their operation. The batch name is used to temporarily identify the plants until they are ready to receive a RFID tag. Once the plants are viable and have received an ID number, the batch name will go away. You will need to refer to the rules to confirm requirements and limits regarding plant count in order to stay in compliance. All fields in this section will need to be completed.

Create Plantings

Planting # 1

Batch Name Strain

Plant Type Planting Date

Plants Count

1

Batch Name

Batch Name

Each Batch Name is required to have a strain. Strains are created in the Admin section of the manual. Strains can be added, deleted and changed as the Licensee requires.

2

Plant Type

Plants Type

You will need to choose if you will be making this group from a seed or clone. Plant type categories are chosen by the MED and cannot be changed or altered without approvals.

3

Strain

Strain

You must select a strain for each group of clones. Strains were created during your Admin setup phase. Additional or new strains can be added at any time.

4

Change Growth Phase button

Planting Date today 

Enter the date you put these plants into the cloning device or area. The Today button can be used to auto populate the current date you are working in Metrc.

5

Plant Count

Plants Count

The plant count is the number of clones or seedling being created in the batch.

6

Create Planting

Create Plantings

Select the Create Plantings Button when you have completed all of the information and are ready to proceed.

7

Cancel button

Cancel

Click this button to exit the screen without saving any data.

Remember:

- Refer to the rules regarding plant counts and how clones or seedlings relate to your plant count.
- You can do multiple clone batches in Metrc
- You can select the blue Add (plus) button to add additional groups of clones.

Plant Packages - Immature

Immature plants can be transferred from an OPC/Producer for sale. Keep in mind that in Metrc it is not permissible to move Flowering plants to another facility for selling purposes. Please see the State rules and regulations of what type of plant may be transferred. In order to move any products that will be sold, it must be moved as a package. To do this, a package must be created in Metrc. You will create a package for the immature plant by navigating to the plants section, choosing the immature tab, and selecting the Create Packages button.

Once you have chosen the create package button, the following form will appear.

1

Batch

Batch

This is the batch you are selecting to remove the Immature plants from that you will be transferring to sell.

2

Item Selection

Item

Please make sure you have selected the appropriate item. The drop down menu will show all available items not just immature plants. Immature plants shipped will need to be chosen from a batch and therefore be strain specific. Items can be created from the

Admin tab. Items can be created, edited and discontinued at any time.

3

Package Tag ID

Tag 

When selling immature plant(s), you cannot use a plant tag; you will need to select a package tag. Select the appropriate tag from the drop down menu. Please remember, all tag ID numbers are in sequential order and correspond to how they arrive in the shipping package. It is advisable to use them in order to make sure the tags stay in order and not become confused.

4

Package Date

Package Date 

Select the package date. You can enter the information manually or select the today button which will choose the date to which your computer is currently set.

5

Plant Count

Plants Count

You will not need to place a RFID tag on each plant. Multiple plants can be selected to ship.

6

Create Package

Click this button to create packages and save your work before you exit.

Remember:

- You can select multiple plants for shipping with one package tag
- Shipping immature plants is strain specific for each package
- Creating a package will automatically adjust the plant count for that batch.

Change Growth Phase - Immature

Changing the growth phase on the Immature tab is where RFID tags are assigned to the plants. At this stage, the batch name will go away and the plants will now have a unique ID number. Once the ID number is assigned, the plant will now have a unique ID number just as a vehicle has a VIN number. The unique ID number is an important step in securing the chain of custody. Using the change immature plant growth phase feature allows the assigning of many tags at one time.

The screenshot shows a window titled "Change Immature Plants Growth Phase". It contains several input fields and buttons. Numbered callouts point to the following elements:

- 1: Immature Plant Batch (Group field)
- 2: Plant Count / Tag Count (Plants Count field)
- 3: Tag ID Selection (Starting Tag field)
- 4: Ending Tag (Ending Tag field)
- 5: Phase Selection (New Phase dropdown)
- 6: New Room (New Room dropdown)
- 7: Growth Date (Growth Date field)

At the bottom, there is a "Change Phase" button and a "Cancel" button.

1

Immature Plant Batch

Group

Select the plantings batch that you wish to change growth phase. This will show all available batches that have been created by the facility. You may click on the magnifying glass to see the list of groups available.

2

Plant Count / Tag Count

Plants Count Tags

Enter the number of plants that you are moving to a new growth phase. By entering this number Metrc will assign ID numbers for those plants. The amount of tags will be removed from the available tag inventory. If there are not enough tags only the available tags will be shown.

3

Tag ID Selection

Starting Tag

This is where you will select the Starting Tag for the plants, most likely this will be the next tag number in the drop down menu. You may click on the magnifying glass to see the list of tags available. As a best practice, you should try to stay within the numbering

order in the system to match the numbering of the tags as received in the shipment.

4

Ending Tag

Ending Tag

This number will auto-populate with the number selected in the plants count and correspond to the number of tags in the system.

5

Phase Selection

New Phase

Selects the new growth phase for the plants. Phase selection can go forwards or backwards. You can select a new phase without changing the location.

6

New Room

New Room

If you move the plants to a new room, select the room here. You can change the location without changing the room.

7

Growth Date

Growth Date

This is the date of the change, you may select the today button to generate today's date.

8

Change Phase button

When all of the information has been entered and verified, select the change growth phase button to complete the transaction.

Remember:

- It is not a requirement to move all of the plants from the clone or seedling to vegetative phase. Plants grow at different rates and metrc does not require the plants to move all at one time.
- Changing phase does not require a room change, the plants may stay in the same room or they may change rooms. This is up to the facility and how they currently manage their plants growth cycle.
- If you do not have enough Tag ID numbers available, Metrc will show the available number of Tags in the tag count field.

Destroy Plants - Immature

Plants are subject to failure at each stage of the growth cycle. Plants at the clone stage moving to immature are more prone to failure than at any other time. The following form provides the user with a way to destroy plants that have not survived.

The screenshot shows a web form titled "Destroy Immature Plants". It includes a "Plant Group # 1" header with a "(clear)" button. Below this is a "Group" dropdown menu with the placeholder text "Type part of Plant Group name..." and a search icon. To the right is a "Destroy Date" field with a calendar icon, a date format "mm/dd/yyyy", and a "today" button. Below the date field is an "(optional) Note" text area. On the left, there is a "Batch ID" label next to a blue circle with the number 1, and a "Plant Count" label next to a blue circle with the number 2. The "Plant Count" field contains the text "ex. 100". At the bottom, there is a green "Destroy Plants" button and a grey "Cancel" button. A blue circle with the number 4 points to the "Destroy Plants" button. A blue circle with the number 3 points to the "today" button, and a blue circle with the number 5 points to the "Note" section.

1

Batch ID

Group

Because the plants are not individually tagged yet, the Batch will show where the destroyed plants are coming from. You will need to choose the batch from the pull down menu.

2

Plant Count

Plants Count

Enter the number of plants that need to be destroyed in this field.

3

Destroy Date

Destroy Date

Enter the date the plants will be destroyed. You can enter this manually or select today and the date will be entered into the field.

4

Destroy Plants button

Once all of the information has been entered and verified, select the green Destroy Plants button which will execute the transaction.

5

Note Section

(optional) Note

Note section is an optional field that will allow you to make notes as to why a plant or group was destroyed.

Remember:

- Make sure you are destroying the correct plant, once a plant is destroyed it cannot be brought back.
- You should always verify your plant count against the rules to make sure a facility is in compliance with the regulations.
- The destroy plants feature can be used as many times as required. The destroy plants feature is not limited to one time.

Vegetative Plants

The vegetative state is the second part of the growth cycle captured in the Metrc system. A vegging plant becomes a flowering plant when the light cycle changes to 12 hours on 12 hours off.

The Vegetative Plants phase in Metrc is captured with the following 5 functions:

1

Assign Tags button

Assign Tags button is used to assign a Plant Tag number to a plant that did not get one assigned to it previously.

2

Replace Tag button

Replace Tag button is used to replace a Damaged or Destroyed RFID tag. This is not a very common practice since the RFID tags are created to be very durable.

3

Change Room button

The Change Room button is used when you are moving plants from one room to another.

4

Change Growth Phase button

The Change Growth Phase button is used to change the growth phase and/or the room of a plant during the growth process.

5

Destroy Plants button

Destroy Plants button is used to destroy a plant when the plant is no longer viable.

6

Changes by Room button

Changes by Room button is used to make changes to all of the plants in an entire room at one time.

7

Record Additives Button

Record Additives button is where you will record the additives used on plants or rooms of plants. Additives would include fertilizer, pesticide or other.

8

Create Plantings Button

Create Plantings button will allow you to create a planting of a clone or a seed from a vegetative plant.

9

Manicure Plants button

Manicure Plants button is used to create a manicure batch when trimming from Vegetative plants in anticipation of selling or processing the product being trimmed off of the plant. If product is being trimmed off of a vegetative plant in anticipation of wasting it, that does not get reported in Metrc; it gets reported in the waste log that is located at the OPC/Producer.

Each of the tabs shown above have specific features and functions and have been broken down individually for easier access and review.

Assign Tags - Vegetative

It is possible, although not recommended, to move plants into metric without having tags assigned to them. In this case, tags can be assigned in the Veg or Flowering phase. The first step in assigning tags is to locate the plants that have not had tags assigned to them. To locate the plants, you can sort all of the plants in the ID field by ascending or descending order and the plants with no ID numbers will appear first.

Change Room Change Growth Phase Assign Tags Replace Tag Destroy Plants Changes by Room		
Tag *	Strain	Room
+	TN Orange Kush	Veg Room 1
+	TN Orange Kush	Veg Room 1
+	TN Orange Kush	Veg Room 1
+	Spring Hill Kush	Plants Room 1

You can select 1 plant at a time or select multiple plants by using the control or shift keys and select with your mouse. By choosing the assign tags button, the assign tags form below will appear.

The dialog box titled "Assign Tags to Vegetative Plants" contains the following elements:

- 1** Plant Count: A text input field showing "0".
- 2** Tags Count: A text input field.
- 3** Starting Tag ID: A dropdown menu showing "- Select -".
- 4** Ending Tag: A text input field.
- 5** Tag Date: A date picker field.
- 6** Assign Tags button: A green button labeled "Assign Tags".
- Cancel button: A white button labeled "Cancel".

1

Plant Count

Plants Count 0

The exact amount of tags required is auto populated to match all the unassign tags. You cannot just assigned some of the tags. The system will only let you assign all the tags at the same time providing you have enough tag numbers available.

2

Tags CountTags Count

This automatically will count the number of tags you will need and have been selected on the started and ending tag fields. This autocalculates for you.

3

Starting Tag IDStarting Tag

Enter the ID of the first tag you wish to use.

4

Ending TagEnding Tag

The ending tag ID number will auto-populate in sequential numeric order, depending on the plants count field entry.

5

Tag DateTag Date

Select today's date or enter the date manually.

6

Assign Tags button

Click the assign tags button to save your entries and exit the screen.

Replace Plants Tag - Vegetative

In the event that an ID tag has become lost or misplaced, a tag can be replaced providing a new ID number for that plant. The following form needs to be completed.

The screenshot shows a web form titled "Replace Vegetative Plants Tag". It contains the following elements:

- A "Plant # 1" label with a "(clear)" button next to it.
- A "Plant" dropdown menu showing "ABCDEF012345670000000011".
- A "New Tag" dropdown menu showing "ABCDEF012345670000001156".
- A "Repl. Date" field showing "01/31/2014" with a calendar icon.
- A green "Replace Tags" button and a grey "Cancel" button at the bottom.

 Numbered callouts point to:

- 1: Plant dropdown menu
- 2: New Tag dropdown menu
- 3: Repl. Date field
- 4: Replace Tags button

1

Plant

Plant ABCDEF012345670000000011

Select the plant ID number from the drop down, for the plant tag you wish to replace (original ID).

2

New Tag

New Tag ABCDEF012345670000001156

Select the next available NEW plant tag id number from the drop down menu.

3

Replace Date

Repl. Date 01/31/2014

Enter the date you are replacing the plant tag with a new tag.

4

Replace Tags button

Replace Tags

Click this button to save the entries and assign the new plant tag number to the plant. Therefore, the old plant ID number is no longer valid.

Remember:

- Replacing a tag should be a rare event
- When you replace a tag that tag will no longer be shown in your system.

Change Room - Vegetative

The change room feature allows you to move plants from one room to another. Plants can be moved one at a time or in multiples.

To select multiple plants, you can use the control (Cmd button on a Mac) or shift buttons on your computer in conjunction with your mouse to highlight all of the plants you would like to move. Simply hold down the control key (Cmd key on Mac) and select the individual plants or hold down the shift key and select the beginning and ending plant and your left mouse key to choose the plants you would like to move. The highlighted plants will be shown in orange. See picture below.

Change Room Change Growth Phase Assign Tags Replace Tag Destroy Plants Changes by Room		
Tag	Strain	Room
ABCDEF012345670000000001	Spring Hill Kush	Plants Room 1
ABCDEF012345670000000002	Spring Hill Kush	Plants Room 1
ABCDEF012345670000000003	Spring Hill Kush	Plants Room 1
ABCDEF012345670000000004	Spring Hill Kush	Plants Room 1

When you select multiple plants, the change room form will add multiple fields. Metrc will allow you to apply single attributes to multiple plants. In the change room area the New Room and Move Date can be selected one time and applied to all of the plants in the list. See picture below.

The screenshot shows the 'Change Flowering Plants Room' form. It includes a 'Template' section at the top with a 'New Room' dropdown (labeled 1) and a 'Move Date' field (labeled 2). Below this are sections for 'Plant # 1' and 'Plant # 2', each with a 'Plant' field (labeled 3) and a 'Move Date' field. At the bottom, there is a 'Perform Move' button (labeled 4) and a 'Cancel' button. The form is designed to allow moving multiple plants at once by applying a single new room and move date to all selected plants.

This example shows two plants being moved, you may however choose as many plants as you like.

1

New Room

New Room - Select - [Apply]

New Room is used to select the new room for the plant(s). Use the drop down to select available rooms (locations) to move the plant(s) to. After selecting the new room, select the apply button to add the new room to all plants in the list.

2

Move Date

Move Date [mm/dd/yyyy] today [Apply]

Enter the date the plants were/ are being moved. After selecting the new date, select the apply button to add the date to all plants in the list.

3

Plant ID

Plant ABCDEF012345670000000038 [Search]

The plant ID number will be populated in sequential order from the orange highlighted list the user initially selected.

4

Perform Move button

Perform Move

Click this button to save your entry and move the plant(s).

If you choose to select a single plant, you can simply select the Change Room Button on the far right end of the page. See picture below:

Change Room Change Growth Phase Assign Tags Replace Tag Destroy Plants Changes by Room			
Tag	Strain	Room	
ABCDEF012345670000000001	Spring Hill Kush	Plants Room 1	
ABCDEF012345670000000002	Spring Hill Kush	Plants Room 1	
ABCDEF012345670000000003	Spring Hill Kush	Plants Room 1	

When you select the change room button, the following form will open.

Change Vegetative Plants Room

×

Plant # 1

(clear)

▼

+

Perform Move

Cancel

Complete the information for all of the plants in the form just as you would have for a multiple move shown in the first example.

Remember:

- In order to use the template for multiple plants, you must highlight them in orange in the plants screen before selecting the change room button.
- You can still add or remove plants to the list by using the Blue Add (+) or Minus (-) buttons.
- You can still move plants back to the original phase if you have made an error.
- Changing large numbers of plants may still be faster with the change by room feature.

Change Growth Phase - Vegetative

The Change Growth Phase feature allows you to change the Growth phase of plants from one phase to another. Plants can be changed one at a time or in multiples.

To select multiple plants, you can use the control or shift buttons on your computer in conjunction with your mouse to highlight all of the plants you would like to move. Simply hold down the control key and select the individual plants or hold down the shift key and select the beginning and ending plant while using the left mouse key. This will select the plants you would like to move. See picture below.

Change Room Change Growth Phase Assign Tags Replace Tag Destroy Plants Changes by Room		
Tag	Strain	Room
ABCDEF012345670000000001	Spring Hill Kush	Plants Room 1
ABCDEF012345670000000002	Spring Hill Kush	Plants Room 1
ABCDEF012345670000000003	Spring Hill Kush	Plants Room 1
ABCDEF012345670000000004	Spring Hill Kush	Plants Room 1

After highlighting the plants, use your mouse to select the change growth phase button and the Change Growth Phase form below will open.

The screenshot shows the 'Change Vegetative Plants Growth Phase' form. It includes a 'Template' section at the top with dropdowns for 'New Phase' (labeled 1), 'New Room' (labeled 2), and a 'Growth Date' selector (labeled 3). Below this are two plant entry sections, 'Plant # 1' and 'Plant # 2'. Each section has a 'Plant ID' field (labeled 4), a 'Replace Tag' field (labeled 5), and dropdowns for 'New Phase', 'New Room', and 'Growth Date'. At the bottom, there is a 'Change Phase button' (labeled 6) and a 'Cancel' button.

This example shows two plants being moved, you may, however, choose as many plants as you like.

1

New Phase

 A form element for selecting a new phase. It consists of a text label 'New Phase', a dropdown menu currently showing '- Select -', and a green button with a white checkmark.

Select the phase the plant is moving to. After selecting the new phase, select the green checkmark button to add the new phase to all plants in the list.

2

New Room

 A form element for selecting a new room. It consists of a text label 'New Room', a dropdown menu currently showing '- Optional -', and a green button with a white checkmark.

Select the room the plant will be moving to in its new phase. After selecting the new room, select the green checkmark button to add the new room to all plants in the list. This is optional, if the plants are not moving rooms or if the plants are moving to different rooms you can choose not to use this function.

3

Growth Date

 A form element for selecting a growth date. It consists of a text label 'Growth Date', a calendar icon, a text input field containing 'mm/dd/yyyy', a button labeled 'today', and a green button with a white checkmark.

Enter the date that the plant(s) changed to the new Growth Phase. After selecting the date, select the green checkmark button to add the date to all plants in the list.

4

Plant ID

 A form element for entering a plant ID. It consists of a text label 'Plant', a text input field containing 'ABCDEF012345670000000071', and a search icon (magnifying glass).

The plant ID number will be populated in sequential order from the orange highlighted list the user initially selected.

5

Replace Tag

 A form element for replacing a tag. It consists of a text label 'Replace Tag', the word '(optional)' below it, a text input field containing 'Type part of the Tag number...', and a search icon (magnifying glass).

The plant tag can be replaced at this phase if the tag was lost or misplaced during the change or move process.

6

Change Phase button

 A green rectangular button with the text 'Change Phase' in white.

Click this button to save your entries and selections, to change the phase of the plant(s).

To Change the Growth Phase of a single plant, select the Change Growth Phase Button on the

far right side of the page. See picture below:

Change Room Change Growth Phase Assign Tags Replace Tag Destroy Plants Changes by Room

Complete the information for all of the plants in the form just as you would have for multiple plants shown in the beginning example above.

Remember:

- In order to use the template for multiple plants, you must highlight them in orange in the plants screen before selecting the change room button.
- You can still add or remove plants to the list by using the Blue Add (+) or Minus (-) buttons.
- You can still move plants back to the original phase if you have made an error.
- Changing large numbers of plants may still be faster with the change by room feature.

Destroy Plants - Vegetative

Plants are subject to failure at each stage of the growth cycle. The following form provides the user with a way to destroy plants that have not survived.

The screenshot shows a web form titled "Destroy Vegetative Plants". It has a "Template" section at the top with a "Destroy Date" field containing a calendar icon, a text input "mm/dd/yyyy", a "today" button, and a green checkmark button. Below this are two rows for "Plant # 1" and "Plant # 2". Each row has a "Plant" field with a text input and a search icon, and a "Destroy Date" field with a calendar icon, a text input "mm/dd/yyyy", and a "today" button. At the bottom is a "Destroy Plants button" with a green "Destroy Plants" button and a grey "Cancel" button. Numbered callouts point to: 1. The green checkmark button in the Template section. 2. The Plant ID field in the Plant # 1 row. 3. The "today" button in the Destroy Date field of the Plant # 1 row. 4. The "Destroy Plants" button at the bottom.

1

Destroy Date

A close-up of the "Destroy Date" field. It includes a calendar icon, a text input with the placeholder "mm/dd/yyyy", a "today" button, and a green button with a white checkmark.

Metrc will allow you to apply the date to multiple plants. Enter the date into the Destroy Date field either manually or select today and metrc will enter the date on your computer. After the date is entered, select the green checkmark button and the date will be applied to all of the selected plants.

2

Plant ID

A close-up of the "Plant" field. It shows a text input with the value "ABCDEF012345670000010701" and a search icon.

The plant ID number shows the plant that will be destroyed.

3

Destroy Date

A close-up of the "Destroy Date" field. It includes a calendar icon, a text input with the placeholder "mm/dd/yyyy", and a "today" button. The green checkmark button is not visible.

If you choose not to use the green apply function shown in item 1, you can enter the dates for the plants manually or select the today button.

4

Destroy Plants button

Once all of the information has been entered and verified, select the green Destroy Plants button which will execute the transaction.

Remember:

- Make sure you are destroying the correct plant, once a plant is destroyed it cannot be brought back.
- You should always verify your plant count against the rules to make sure a facility is in compliance with the regulations.
- The destroy plants feature can be used as many times as required. The destroy plants feature is not limited to one time.

Changes by Room - Vegetative

The most efficient way to move a large number of plants is to use the Changes By Room feature. The Changes by Room feature allows a user to change large numbers of plants by room or by phase without having to enter individual plant information. This will require the user to utilize the Changes by Room button in conjunction with a Room. To use this function to its maximum capability, it may require the user to add or modify the Rooms they have already created.

In many facilities, a room may have multiple groups of plants. It is acceptable in metrc to sub divide a room into multiple sections to match what is being grown in that room. For example: Veg. Room Section 1, Veg. Room Section 2, Veg. Room Section 3 etc.

By utilizing this style of room layout, a user may use the Change by Room feature to move large groups of plants simultaneously without having to input information for each plant.

Keep in mind that the room can stay the same while only changing the phase of the sections of plants in that room. After the rooms have been mapped out accordingly, it is a simple task to perform the new room or new phase function. Simply launch the form in the changes by room feature and select the perform change function. For more information see moving plant section.

1

Changes by Room

Room Veg Room A

This screen allows you to make room, phase or both room and phase changes of plants contained in a room (location). You can move a whole room at a time from this screen.

2

Change Date

Change Date 01/10/2014

Select the date you made the changes to the plants in the room.

3

New Room

New Room Veg Room B

The New Room menu will allow you to choose the room or section the plants will be changing to without having to enter individual plant information.

4

New Phase

 A screenshot of a software interface showing a dropdown menu. The text 'New Phase' is on the left, and 'Flowering' is selected in the dropdown box on the right.

The New Phase menu will allow you to choose the phase the room or section will be changing to without having to enter individual plant information.

5

Perform Changes button

Select the Perform Changes button to save your data and execute the change.

For small numbers of plants that are not ready to move but are contained inside larger groups:

In the event some plants are not ready to move to the next phase or change rooms, it is still possible to utilize this feature for efficiency. By performing the Changes by Room function, the user can move all of the plants to the desired phase or location and then select the plants that are not ready to move or change phase utilizing the single plant option. The plants that were not ready to move can simply be moved back to the appropriate phase. Utilizing this technique may provide a more efficient way of handling plants than utilizing the control, shift or single plant move functions.

Remember:

- You can move plants using the shift or control buttons (see moving plants for more details).
- Rooms can be added or changed as the need arises, there is no limit on how many rooms you have, the names or how often they are changed or edited.
- A bar-code scanner may be useful in moving small numbers of plants to ensure the correct plant ID is being selected.

Record Additives - Vegetative

This area in Metrc is where additives like fertilizer, pesticides and other additives are recorded by plant. Additives may be recorded by room in the Additives Tab. Please see the State's rules and regulations as to whether additives are required to be entered into Metrc.

1

Type

Type

Type is a drop down menu that will allow you to select the type of additive used on the plant. Fertilizer, Pesticide and other are available to use.

2

Product Name Field

Product Name

Product Name Field is where the name of the product used on the plant will be entered.

3

EPA Reg. No.

EPA Reg. No.

EPA Reg. No. is where the EPA regulation number of the additive will be entered.

4

Supplier

Supplier

Supplier is where the additive was purchased. (Wholesale distributor, Warehouse, CO-OP, etc.)

5

Appl. Device

Appl. Device

Application Device is used to describe the type of Application Device that was used to distribute the Additive on the plants (spray bottle, fine mist, nozzle, measured scoop, etc.)

6

Total Amount

Total Amount

ex. 100.23

ex. Gallons

Total Amount is used to describe the total amount of the Additive that was used.

7

Date Applied

Date Applied

mm/dd/yyyy

today

Date Applied is used to show exactly what date that the Additive was used on the plant.

8

Active Ingredient

Active

Ingredient # 1

ex. 3.8

%

(active ingredients)

Active Ingredient identifies the active ingredient in the additive. Multiple active ingredients can be added. This is the active ingredient listed on the product being applied and the concentration percentage. Active Ingredients will be stored once they are entered so that active ingredient will show on the dropdown list when logging future additives. The plus sign will allow you to add more active ingredients.

9

Plants Applied To

Plant # 1

Type part of Plant number...

(plants)

Plants Applied to identifies the plant or plants that the additive is being applied to. The plus sign will allow you to add more plants to the list.

Create Plantings - Vegetative

Create Plantings is where cuttings or seeds can be created from a plant in Metrc. Please check the States rules and regulations as to whether using the create plantings is required.

1

Plant Field

Plant Field is where the plant tag ID will be entered that the cutting or seed is coming from. You may use the magnifying glass to see the list of plants available.

2

Group Name

Group Name will auto-populate with the plant tag ID however it is able to be edited into a Group Name that is needed, if you do not wish to use the plant tag ID.

3

Plant Type

Plant type is where clone or seed will need to be selected.

4

Plant Count

Plant Count is where you will explain how many cuttings or seeds were taken from the plant.

5

Strain Field

Strain

Strain Field is where you will specify the strain of the cutting or seeds that were taken from the plant. You may use the magnifying glass to see the available strains to choose from.

6

Planting Date

Planting Date

Planting date is the date the cutting or seed was taken from the plant. You may use the today button to display today's date.

7

Create Plantings

Clicking the create plantings button will create the new batch for the cuttings or seeds taken from the plant.

Manicure Plants - Vegetative

The Manicure plant process is designed for a business that may remove parts of a plant before harvest with the intention of selling or processing what was removed. To be clear, this is before the primary harvest. The manicure process could also be used if a usable or sellable part of the plant was broken off prior to harvest. The manicure plants feature is not used for waste reporting when all that is being trimmed off of the plant is waste. That waste gets reported into the OPC/Producer waste log located at the OPC/Producer facility. Manicuring a plant can be done for single or multiple plants.

To Manicure Multiple Plants select the plants by using the control or shift buttons on your computer in conjunction with your mouse to highlight all of the plants you would like to Manicure. Simply hold down the control or the shift key and the left button on your mouse to select desired plants as shown in the figure below.

Plant # 1 [clear]

Plant: ABCDEF012345670000000000 [v] Weight: [] - Select - [v]

Harvest Name: [] (optional) Drying Room: - Select - [v]

Manicure Date: [] today [calendar icon]

[+]

[Manicure Plants] [Cancel]

Complete the information for all of the plants in the form just as you would have for a multiple Manicure Plants harvest shown in the beginning example above.

Remember

- In order to use the template for multiple plants you must highlight them in orange in the plants screen before selecting the Manicure Plants button.
- It is not required to use all of the apply features, you may choose to use only in certain areas. For instance a user may choose only the harvest name and date but not the unit of measure or room.
- When you choose the apply button it will add that information to every plant in the list, so make sure you have chosen only the plants you wish to manicure.
- You can still add or remove plants to the list by using the Blue Add (+) or Minus (-) buttons.
- You will still need to enter all of the manicure weights for each individual plant.
- After you have selected the Manicure Plants button that manicure batch name cannot be changed or altered. If you have forgotten to add a plant, you can create a new manicure batch with the same name. By using the same name, all newly harvested plants will go into the existing batch until 12 am EST.
- Manicure is not a waste process.
- If you remove a part of the plant prior to harvest with the intent to sell or process it, you will use

the manicure feature.

- If a piece of usable material falls off a plant you can use this feature.

Item Detail

The item detail area of Metrc provides extensive detail about a specific item, be it a package, transfer or plant. Because Metrc is a chain of custody system, each transaction that occurs regarding an item with an ID number has a record along with the characteristics of the transaction. Information included in a plant's event store would contain the tag ID number, Strain, movement history, employees who have interacted with the plant and a date and time stamp for each transaction. It is for this reason that anyone with Metrc access should not allow anyone to perform any data entry tasks under their profile.

The screen below shows a typical series of transactions for a plant.

Multiple instances of a plant's history can be shown from one screen.

1

Drill-Down Arrow

The Arrow next to a plant or package tag will open up to show additional details about the particular ID number. Selecting the arrow once will open it and selecting the arrow twice will close it.

2

Tool Bar

Description

The tool bar across the top of the Drill Down Feature allows the user to identify the different attributes for viewing of the particular item being shown. By clicking at the top of any column the information is sorted in numeric or alphabetical order in ascending or descending order.

3

Filter button

The filter button allow you to search for more information about that particular area. For more information about the search function, see the search chapter of this manual.

Flowering Plants

The Flowering state is the third part of the growth cycle captured in the metrc system. Harvesting, the process of cutting down a plant and obtaining the wet weight before initiating the trim process is performed on plants in the flower phase. Marijuana in the form of buds (flower), trim or shake by weight is captured and the product is now ready for the cure process. A harvest is required to be made up of strain specific plants.

The Flowering Plants phase in Metrc is captured with the following 7 functions:

1

Replace Tag button

Replace Tags

Replace Tag is used to replace a plant tag that is damaged, lost or in some way in need of replacing.

2

Change Room button

Change Room

This can be used to change the room on one plant or multiple plants that you choose to highlight prior to clicking on the Change Room button.

3

Change Growth Phase button

Change Growth Phase

Change Growth Phase button is used to change the growth phase on one plant or multiple plants.

4

Destroy Plants button

Destroy

Destroy Plants button is used to destroy plants, remove them from your active plant counts and put them into your Inactive tab because they are no longer active, viable growing plants.

5

Changes by Room button

 A rectangular button with a light gray background and a thin black border, containing the text "Changes by Room" in a standard sans-serif font.

Changes by Room is used to move a section of plants or an entire room of plants.

6

Record Additives

 A rectangular button with a light gray background and a thin black border, containing the text "Record Additives" in a standard sans-serif font.

Record Additives tab is used to record additives such as fertilizer, pesticides or other additives by plant.

7

Create Plantings

 A rectangular button with a light gray background and a thin black border, containing the text "Create Plantings" in a standard sans-serif font.

Create Plantings button is used for cuttings or seeds to be planted in an immature batch.

8

Manicure Plants button

 A rectangular button with a light gray background and a thin black border, containing the text "Manicure" in a standard sans-serif font.

Manicure Plants button is used to create a manicure batch when trimming from Flowering plants, prior to harvest, in anticipation of selling or processing the product being trimmed off of the plant. If product is being trimmed off of a flowering plant in anticipation of wasting it, that does not get reported in Metrc; it gets reported in the waste log that is located at the OPC/Producer.

9

Harvest Plants button

 A rectangular button with a light gray background and a thin black border, containing the text "Harvest" in a standard sans-serif font.

Harvest Plants button is used when you harvest your plant(s).

Each of the tabs shown above have specific features and functions and have been broken down individually for easier access and review.

selecting the new room select the apply button to add the new room to all plants in the list.

Replace Plants Tag - Flowering

In the event that an ID tag has become lost or misplaced a tag can be replaced providing a new ID number for that plant. The following form needs to be completed.

The screenshot shows a web form titled "Replace Flowering Plants Tags". It contains the following elements:

- Plant # 1**: A text input field with a "Clear" button next to it. A blue circle with the number 1 points to this field.
- Plant**: A label for the first search input field.
- New Tag**: A label for the second search input field.
- Repl. Date**: A date selection field with a calendar icon, a text input showing "mm/dd/yyyy", and a "today" button. A blue circle with the number 3 points to this field.
- Replace Tags button**: A green button labeled "Replace Tags" and a grey "Cancel" button. A blue circle with the number 4 points to the "Replace Tags" button.

1

Plant

Plant

Select the plant ID number from the drop down, for the plant tag you wish to replace (original ID).

2

New Tag

New Tag

Select the next available NEW plant tag id number from the drop down menu.

3

Replace Date

Repl. Date today

Enter the date you are replacing the plant tag with a new tag.

4

Replace Tags button

Click this button to save the entries and assign the new plant tag number to the plant. Therefore; the old plant id number is no longer valid.

Remember:

- Replacing a tag should be a rare event
- When you replace a tag that tag will no longer be shown in your system.

Destroy Plants - Flowering

Plants are subject to failure at each stage of the growth cycle. The following form provides the user with a way to destroy plants that have not survived.

The screenshot shows a web form titled "Destroy Flowering Plants". It has a "Template" section at the top with a "Destroy Date" field containing a calendar icon, "mm/dd/yyyy", "today", and a green checkmark button. Below this are two rows for "Plant # 1" and "Plant # 2". Each row has a "Plant" field with a search icon, containing the ID "ABCDEF012345670000000038", and a "Destroy Date" field with a calendar icon, "mm/dd/yyyy", "today", and a green checkmark button. At the bottom is a "Destroy Plants button" which is a green button labeled "Destroy Plants" and a grey button labeled "Cancel". Numbered callouts point to: 1. The green checkmark button in the Template section. 2. The Plant ID field in the Plant # 1 row. 3. The green checkmark button in the Plant # 1 row. 4. The green "Destroy Plants" button.

1

Destroy Date

A close-up of the "Destroy Date" field. It includes a calendar icon, a text input field with "mm/dd/yyyy", a "today" button, and a green checkmark button.

Metric will allow you to apply the date to multiple plants. Enter the date into the Destroy Date field either manually or select today and Metric will enter the date on your computer. After the date is entered select the apply button and the date will be applied to all of the selected plants.

2

Plant ID

A close-up of the "Plant" field. It includes a text input field with "ABCDEF012345670000000038" and a search icon.

The plant ID number shows the plant that will be destroyed.

3

Destroy Date

A close-up of the "Destroy Date" field. It includes a calendar icon, a text input field with "mm/dd/yyyy", and a "today" button.

If you choose not to use the green apply function shown in item 1 you can enter the dates for the plants manually or select the today button.

4

Destroy Plants button

A close-up of the "Destroy Plants" button, which is a green button with the text "Destroy Plants".

Once all of the information has been entered and verified select the green Destroy

Plants button which will execute the transaction.

Remember:

- Make sure you are destroying the correct plant, once a plant is destroyed it cannot be brought back.
- You should always verify your plant count against the rules to make sure a facility is in compliance with the regulations.
- The destroy plants feature can be used as many times as required. The destroy plants feature is not limited to one time.

Changes by Room - Flowering

The most efficient way to move a large numbers of plants is to use the Changes By Room feature. The Changes by Room feature allows a user to change large numbers of plants by room or by phase without having to enter individual plant information. This will require the user to utilize the Changes by Room button in conjunction with a Room. To use this function to its maximum capability it may require the user to add or modify the Rooms they have already created.

In many facilities a room may have multiple groups of plants. It is acceptable in Metrc to sub divide a room into multiple sections to match what is being grown in that room. For example: Flowering Room Section 1, Flowering Room Section 2, Flowering Room Section 3 etc.

By utilizing this style of room layout, a user may use the Change by Room feature to move large groups of plants simultaneously without having to input information for each plant.

Keep in mind that the room can stay the same while only changing the phase of the sections of plants in that room. After the rooms have been mapped out accordingly it is a simple task to perform the new room or new phase function. Simply launch the form in the changes by room feature and select the perform change function. For more information see moving plant section.

1

Changes by Room

Room Room A Flower 1

This screen allows you to make room, phase or both room and phase changes of plants contained in a room (location). You can move a whole room at a time from this screen.

2

Change Date

Change Date 01/01/2014

Select the date you made the changes to the plants in the room.

3

New Room

New Room Room A Veg 1

The New Room menu will allow you to choose the room or section the plants will be changing to without having to enter individual plant information.

4

New Phase

New Phase Vegetative 

The New Phase menu will allow you to choose the phase the room or section will be changing to without having to enter individual plant information.

5

Perform Changes button

Perform Changes

Select the Perform Changes button to save your data and execute the change.

For small numbers of plants that are not ready to move but are contained inside larger groups:

In the event some plants are not ready to move to the next phase or change rooms it is still possible to utilize this feature for efficiency. By performing the Changes by Room function the user can move all of the plants to the desired phase or location and then select the plants that are not ready to move or change phase utilizing the single plant option. The plants that were not ready to move can simply be moved back to the appropriate phase. Utilizing this technique may provide a more efficient way of handling plants than utilizing the control, shift or single plant move functions.

Remember:

- You can move plants using the shift or control buttons (see moving plants for more details).
- Room can be added or changed as the need arises, there is no limit on how many rooms you have, the names or how often they are changed or edited.
- A bar-code scanner may be useful in moving small numbers of plants to ensure the correct plant ID is being selected.

Record Additives - Flowering

This area in Metrc is where additives like fertilizer, pesticides and other additives are recorded by plant. Additives may be recorded by room in the Additives Tab. Please see the State's rules and regulations as to whether additives are required to be entered into Metrc.

1

Type

Type

Type is a drop down menu that will allow you to select the type of additive used on the plant. Fertilizer, Pesticide and other are available to use.

2

Product Name Field

Product Name

Product Name Field is where the name of the product used on the plant will be entered.

3

EPA Reg. No.

EPA Reg. No.

EPA Reg. No. is where the EPA regulation number of the additive will be entered.

4

Supplier

Supplier

Supplier is where the additive was purchased. (Wholesale distributor, Warehouse, CO-OP, etc.)

5

Appl. Device

Appl. Device

Application Device is used to describe the type of Application Device that was used to distribute the Additive on the plants (spray bottle, fine mist, nozzle, measured scoop, etc.)

6

Total Amount

Total Amount

Total Amount is used to describe the total amount of the Additive that was used.

7

Date Applied

Date Applied

Date Applied is used to show exactly what date that the Additive was used on the plant.

8

Active IngredientActive
Ingredient # 1

ex. 3.8

%

 (active ingredients)

Active Ingredient identifies the active ingredient in the additive. Multiple active ingredients can be added. This is the active ingredient listed on the product being applied and the concentration percentage. Active Ingredients will be stored once they are entered so that active ingredient will show on the dropdown list when logging future additives. The plus sign will allow you to add more active ingredients.

9

Plants Applied To

Plant # 1

Type part of Plant number...

 (plants)

Plants Applied to identifies the plant or plants that the additive is being applied to. The plus sign will allow you to add more plants to the list.

Create Plantings - Flowering

Create Plantings is where cuttings or seeds can be created from a plant in Metrc. Please check the States rules and regulations as to whether using the create plantings is required.

The screenshot shows the 'Create Plantings from Vegetative Plants' window. It includes a 'Planting # 1' label and a '(clear)' button. The fields are: Plant (1), Group Name (2), Plants Type (3), Plants Count (4), Strain (5), Planting Date (6), and a 'Create Plantings' button (7). The 'Plant' field has a magnifying glass icon. The 'Group Name' field has a placeholder 'ex. B. Kush 5-30'. The 'Plants Type' field is a dropdown menu. The 'Plants Count' field has a placeholder 'ex. 100'. The 'Strain' field has a magnifying glass icon. The 'Planting Date' field has a calendar icon and a 'today' button. The 'Create Plantings' button is green.

1

Plant Field

The 'Plant' field is a text input field with the placeholder 'Type part of Plant number...' and a magnifying glass icon to its right.

Plant Field is where the plant tag ID will be entered that the cutting or seed is coming from. You may use the magnifying glass to see the list of plants available.

2

Group Name

The 'Group Name' field is a text input field with the placeholder 'ex. B. Kush 5-30'.

Group Name will auto-populate with the plant tag ID however it is able to be edited into a Group Name that is needed, if you do not wish to use the plant tag ID.

3

Plant Type

The 'Plants Type' field is a dropdown menu with the placeholder '- Select -'.

Plant type is where clone or seed will need to be selected.

4

Plant Count

The 'Plants Count' field is a text input field with the placeholder 'ex. 100'.

Plant Count is where you will explain how many cuttings or seeds were taken from the plant.

5

Strain Field

Strain

Strain Field is where you will specify the strain of the cutting or seeds that were taken from the plant. You may use the magnifying glass to see the available strains to choose from.

6

Planting Date

Planting Date

Planting date is the date the cutting or seed was taken from the plant. You may use the today button to display today's date.

7

Create Plantings

Clicking the create plantings button will create the new batch for the cuttings or seeds taken from the plant.

1

Harvest Name

Harvest Name 

(optional)

You may name your Manicure batch by any name, or the system will assign one for you. All Manicure batches are required to have a name. After entering the Manicure Name, select the green checkmark to add the name to all plants in the list. It is suggested that you use the strain name and manicure date in the Manicure batch name.

2

Plant ID

Plant 

The plant ID number will be populated in sequential order from the orange highlighted list the user initially selected.

3

Unit of Measure

Unit of Measure 

Enter the unit of measure from the drop down list. After selecting the Unit of Measure select the green checkmark to add the Unit of Measure to all plants in the list.

4

Location

Drying Room 

Select the location where the Manicure Harvest is taking place. After selecting the Location select the green checkmark to add the location to all plants in the list.

5

Manicure Date

Manicure Date  

Select the date of the Manicure Harvest. After selecting the date select the green checkmark to add date to all plants in the list.

6

Manicure Weight

Weight 

Enter the weight of the manicure removed from the "pre-harvest" plant. You will have to add the weight for each individual plant in the list.

7

Manicure Plants button

Manicure Plants

Select the Manicure Plants button to create the Manicure Batch and save entries and exit.

To create a single plant Manicure Harvest select Manicure button on the right side of the page. See picture below:

Tag	Strain	Room	Unit	Batch Date	Harvest Date	Harvested
ABCDEF012345678901000	AK-47	Dry Room A	lb	10/20/19	09/10/2019	0.0000
ABCDEF012345678901000	AK-47	Dry Room C	lb	10/20/19	10/20/19	0.0000

When you select the Manicure Plants button the following form will open.

Manicure Plants

Cancel

Complete the information for all of the plants in the form just as you would have for a multiple Manicure Plants harvest shown in the beginning example above.

Remember

- In order to use the template for multiple plants you must highlight them in orange in the plants screen before selecting the Manicure Plants button.
- It is not required to use all of the apply features, you may choose to use only in certain areas. For instance a user may choose only the harvest name and date but not the unit of measure or room.
- When you choose the apply button it will add that information to every plant in the list, so make sure you have chosen only the plants you wish to manicure.
- You can still add or remove plants to the list by using the Blue Add (+) or Minus (-) buttons.
- You will still need to enter all of the manicure weights for each individual plant.
- After you have selected the Manicure Plants button that manicure batch name cannot be changed or altered. If you have forgotten to add a plant, you can create a new manicure batch with the same name. By using the same name, all newly harvested plants will go into the existing batch until 12am EST.
- Manicure is not a waste process.
- If you remove a part of the plant prior to harvest with the intent to sell or process it, you will use the manicure feature.
- If a piece of usable material falls off a plant you can use this feature.

Harvesting Plants

The Metrc system was designed to create a Harvest Batch capturing the weight of the plants as described in the rules and regulations. In this process each plant has been moved into the harvest stage, individually weighed and entered into Metrc providing not only individual weights for the plants but also a total wet weight for the Harvest Batch.

The Harvesting Process must be done strain specifically. The Harvesting Process can be used for individual or multiple plants. Multi-Plant Harvesting will apply a single entry for the Harvest Name, Unit of Measure, Cure or Harvest Room and Harvest Date. There is no limit to how many plants you can choose to create a Harvest Batch.

To begin the process you will select multiple plants which can be done by using the control or shift key and your left mouse button, selecting the plants you want to harvest. For simplicity purposes we have shown a harvest of 2 plants in the example below.

Tag	Strain	Room	Weight	Batch Date	Harvest Date	Harvested
ABCDEF012345670000000038	AK-47	Wet Room 1	10	10/10/2019	10/10/2019	2 days
ABCDEF012345670000000039	AK-47	Wet Room 2	10	10/10/2019	10/10/2019	2 days

Once you have selected the plants you want to harvest, use your mouse to select the harvest plants button which will open the form below.

The screenshot shows the 'Harvest Plants' form with the following numbered callouts:

- 1: Harvest Name (Template)
- 2: Unit of Measure
- 3: Location
- 4: Harvest Date
- 5: Plant ID
- 6: Subtract
- 7: Weight
- 8: Add (+)
- 9: Cancel
- 10: Harvest Plants

The form includes a 'Template' section at the top with fields for Harvest Name, Unit of Measure, Location, Drying Room, and Harvest Date. Below this are sections for 'Plant # 1' and 'Plant # 2', each with fields for Plant ID, Harvest Name, Weight, Drying Room, and Harvest Date. At the bottom, there is an 'Add' button (+) and a 'Harvest Plants' button.

After the form is opened you will have the option of either entering the harvest and plant information individually or using the upper portion of the form shaded in green to "apply" the information to all of the plants selected.

1

Harvest Name

 A form element with a light green background. It contains a text input field with the placeholder text "Harvest Name" and a green button with a white checkmark icon on the right.

A harvest must always have a Harvest Batch name. The Harvest Name can be whatever a business chooses. If a name is not selected, Metrc will create a name for the harvest. After selecting the name choose the apply button to add the name to all of the specified plants.

2

Unit of Measure

 A form element with a light green background. It contains a dropdown menu with the text "- Select -" and a green button with a white checkmark icon on the right.

This is where you may select the unit of measure you want to use for each plant. It is not a requirement to use the same unit of measure if this is not the preferred method. If you choose to apply the same unit of measure, enter into this field and select the green checkmark button to add to all of the specified plants.

3

Location

 A form element with a light green background. It contains a dropdown menu with the text "- Select -" and a green button with a white checkmark icon on the right.

The Drying Room field is where you can select the room you will be performing the harvest in. This can be the same for all plants but is not required. If the operation is performed in the same room enter the information and select the green checkmark to add to all of the plants.

4

Harvest Date

 A form element with a light green background. It contains a text input field with the placeholder text "Harvest Date", a calendar icon, a text input field with the placeholder text "mm/dd/yyyy", a button with the text "today", and a green button with a white checkmark icon on the right.

Select the harvest date by using the today button or manually entering the information in the field and selecting the green checkmark.

5

Plant ID

 A form element with a light green background. It contains a text input field with the text "ABCDEF012345670000000038" and a search icon (magnifying glass) on the right.

The plant ID number will be populated in sequential order from the orange highlighted list the user initially selected.

6

Weight

Weight

Each plant is required to have its weight entered individually, for each plant.

7

Subtract

The Blue Subtract (-) button will remove a plant from the list.

8

Add

The Blue Add (+) Button will add an additional plant to the list.

9

Cancel

Select the cancel button to end the operation prior to the harvest. If this button is used it will eliminate all of the functions performed and return all plants to their prior state before the list was created.

10

Harvest Plants

Selecting the Harvest Plants button will create a new harvest batch made up of all of the selected plants with the information provided in all of the fields. Before selecting the harvest plants button the user should verify all of the information is both correct and accurate.

To create a single plant Harvest select the Harvest Plants button on the far right side of the page. See picture below:

Report Type Change Rows Change Grow's Phase Destroy Change by Row Record Attributes Create Harvests Harvest Harvest						
Tag	Row	Row	Row	Batch Date	Plant Date	Harvested
ABCDEF123456789012345	44-41	Big Row A	No	10/26/16	09/20/16	3 Rows
ABCDEF123456789012345	44-41	Phase Row D	No	12/26/16	11/10/16	3 Rows

When you select the Harvest Plants button, the following form will open.

Complete the information for all of the plants in the form just as you would have for a multiple Plants Harvest shown in the first example above.

Remember

- In order to use the template for multiple plants you must highlight them in orange in the plants screen before selecting the Harvest Plants button.
- It is not required to use all of the apply features, you may choose to use only in certain areas. For instance a user may choose only the harvest name and date but not the unit of measure or room.
- When you choose the green checkmark button it will add that information to every plant in the list, so make sure you have chosen only the plants you wish to harvest.
- You can still add or remove plants to the list by using the Blue Add (+) or Minus (-) buttons.
- You will still need to enter all of the plant weights for each individual plant.
- A Harvest Batch MUST be strain specific.
- After you have selected the Harvest Plants button that harvest cannot be changed or altered. If you have forgotten to add a plant, you can create a new harvest with the same name. By using the same exact name, all newly harvested plants will go into the existing batch until 12am EST.

Item Detail

The item detail area of Metrc provides extensive detail about a specific item, be it a package, transfer or plant. Because Metrc is a chain of custody system, each transaction that occurs regarding an item with an ID number has a record along with the characteristics of the transaction. Information included in a plant's event store would contain the tag ID number, Strain, movement history, employees who have interacted with the plant and a date and time stamp for each transaction. It is for this reason that anyone with Metrc access should not allow anyone to perform any data entry tasks under their profile.

The screen below shows a typical series of transactions for a plant.

Multiple instances of a plant's history can be shown from one screen.

1

Drill-Down Arrow

The Arrow next to a plant or package tag will open up to show additional details about the particular ID number. Selecting the arrow once will open it and selecting the arrow twice will close it.

2

Tool Bar

Description

The tool bar across the top of the columns allows the user to identify the different attributes for viewing of the particular item being shown. This is known as a sort feature. By clicking at the top of any of the columns the information will be sorted in numeric or alphabetical order ascending or descending.

3

Filter button

The filter button allow you to search for more information about that particular area. For more information about the search function see the Search Functions chapter of this manual.

Additives

Additives Tab is where additives by room can be added. Please check the State's rules and regulations as to whether additives are required in Metrc. Additives include fertilizer, pesticides, etc. Additives can also be added per plant in the vegetative and flowering phases.

Additives by Room

Additives by Room will allow you to add additives by room instead of by plant. Please see the State's rules and regulations as to whether additives are required in Metrc.

The screenshot shows a web form titled "Record Room Plants Additives". It contains several input fields and buttons. Numbered callouts point to the following elements:

- 1**: Type Field (dropdown menu)
- 2**: Product Name (text input)
- 3**: EPA Reg. No. (text input)
- 4**: Supplier (text input)
- 5**: Appl. Device (text input)
- 6**: Total Amount (text input)
- 7**: Date Applied (date picker)
- 8**: Active Ingredients (text input)
- 9**: Room (text input)
- 10**: Record Additives button

1

Type Field

Create Packages button

Submit for Testing Button

Report Waste button

Each of the tabs shown above have specific features and functions and have been broken down individually for easier access and review.

Finish Batch button

Finish Batch button is used to finish a Harvest or Manicure batch once all packages have been created and all waste has been reported. There should always be weight left in a harvest batch to account for the moisture loss for that harvest batch.

Create Package - Harvested

Because Metrc is a chain of custody, packages of buds or shake/trim are created from the harvest or manicure batch. The creation of a new package requires the removal of product from a Harvest or Manicure batch which is why the packages are created in the harvested area.

The screenshot shows the 'Create Packages' window with the following fields and callouts:

- 1** Package Tag ID: Points to the 'New Tag' input field.
- 2** Item Selection: Points to the 'Item' input field.
- 3** Package Quantity: Points to the 'Quantity' dropdown menu.
- 4** Package Date: Points to the 'Package Date' input field.
- 5** Harvest Name: Points to the 'Harvest # & Name' input field.
- 6** Weight: Points to the 'Weight' input field.
- 7** Create Packages button: Points to the green 'Create Packages' button.

Packages created in this screen will be available for adjustment in the package screen and viewed in the transfers area.

1

Package Tag ID

New Tag

Select the next available package tag ID number from the drop down menu. Put this tag on the shipping container (bag, jar, container, etc.) This will be required before it can be transferred.

2

Item Selection

Item

This is where you will select the Item that you are packaging. If you do not see the item in your drop down menu you should review the item list for the facility and confirm it has been created in your item list.

3

Package Quantity

Quantity - Select -

Package Quantity is auto calculated by what is entered to the weight amount on the right side of the box. The unity of measure for the package must be selected. For example, pounds can be selected on the right side and grams will be calculated on the left side. The grams calculation is based on 453.6 grams.

4

Package Date

Package Date  mm/dd/yyyy

Select the date for the creation of the package.

5

Harvest Name

Harvest # 1  

Select the Harvest or Manicure Batch you are packaging from. You will continue to package from this harvest batch until all sellable or processable material is gone.

6

Weight

Quantity

Enter the weight of the package. Remember you must follow the State's rules for packages. Metrc does not stop you from exceeding the maximum amounts for packages. Metrc is a reporting tool providing visibility for what is actually being done.

7

Create Packages button

Once you have completed all of the fields in the form, you will select the Create Packages button to complete the transaction.

Remember

- When you create packages from a Harvest Batch - in your OPC/Producer, you must create them from the Plants menu under the Harvested Tab (not the packages menu). This will associate your package to the Harvest Batch.
- When packages are created from the harvest batch, the overall wet weight will be decreased by the amount of the new package.
- Always verify you have selected the correct unit of measure for each product.
- You cannot adjust a package from the harvested screen.

Submit for Testing - Harvested

Submit for testing in the harvested area is where you may submit a Harvest Batch for testing. Please see the State's rules and regulations as to whether you will need to submit a harvest batch for testing or test from packages. .

The screenshot shows the 'Submit for Testing' window with the following fields and callouts:

- 1 New Tag:** A text input field labeled 'New Tag' with a placeholder 'Type part of the Tag number...' and a magnifying glass icon.
- 2 Item Field:** A text input field labeled 'Item' with a placeholder 'Type part of the Item name...' and a magnifying glass icon.
- 3 Quantity Field:** A dropdown menu labeled 'Quantity' with options 'Calculated' and '- Select -'.
- 4 Packaged Date:** A date input field labeled 'Package Date' with a placeholder 'mm/dd/yyyy' and a 'today' button.
- 5 Process Validation Box:** A checkbox labeled 'Process Validation Testing Sample'.
- 6 Submit for Testing:** A green button labeled 'Submit for Testing' and a grey button labeled 'Cancel'.

Other visible fields include 'Harvest # 1' with a placeholder 'Type part of Harvest name...' and a magnifying glass icon, and a 'Quantity' field with a placeholder 'ex. 100.23' and a '- Select -' dropdown. A blue banner at the bottom states: 'Creating Sample Packages immediately locks out the source Harvest(s) by setting the Testing State to SubmittedForTesting. More Info'.

1

New Tag

New Tag Type part of the Tag number... Q

New Tag is where the new package tag will be applied to the testing sample. You may click the magnifying glass to see the available package tags to assign.

2

Item Field

Item Type part of the Item name... Q

Item Field is the Item name for the test sample. The item name should reflect the item name of the harvest you are pulling from. You may click the magnifying glass to see the available harvest batch.

3

Quantity Field

Quantity Calculated - Select -

Package Quantity is auto calculated by what is entered to the weight amount on the right side of the box. The unity of measure for the package must be selected. For example, pounds can be selected on the right side and grams will be calculated on the left side. The grams calculation is based on 453.6 grams.

4

Packaged Date

Package Date  mm/dd/yyyy today

Select the date for the creation of the test sample.

5

Process Validation Box

☐ Process Validation Testing Sample

Process Validation box is checked for any test sample that a licensee is using for their process validation.

6

Harvest Field

Harvest # 1  

Select the Harvest or Manicure Batch you are packaging from to test. Please see the State's rules and regulations as to whether test samples should be pulled from a Harvest Batch or packages.

7

Quantity

Quantity

Quantity on the right side is how much you are pulling out of the harvest batch to test.

8

Submit for Testing

[Submit for Testing](#)

Submit for Testing button is used once you are ready to create your test sample.

Report Waste - Harvested

Reporting waste for each harvest is required. Reporting waste can be either wet or dry and can be done multiple times during a harvest.

The screenshot shows a 'Report Waste' dialog box. It has a title bar with a close button. Inside, there's a section for 'Batch # 1' with a 'Batch' dropdown menu showing 'NYEve Harvest Batch' and a 'Waste Date' field showing '01/16/2014'. Below this is a 'Weight' field with '1' and a unit dropdown showing 'Pounds'. At the bottom, there's a green 'Report Waste' button and a grey 'Cancel' button. Numbered callouts point to these elements: 1 points to the Batch dropdown, 2 points to the Weight field, 3 points to the Waste Date field, and 4 points to the Report Waste button.

1

Harvest Batch

Batch NYEve Harvest Batch

This is where you identify which harvest you are working in.

2

Weight

Weight 1 Pounds

Enter the amount of waste for the harvest

3

Waste Date

Waste Date 01/16/2014

Enter your date for reporting waste.

4

Report Waste button

Report Waste

Select this button when you are ready to report waste and save your work.

Remember:

- Waste can be either wet or dry
- You can report waste multiple times

- You do not report waste pre-harvest in metrc.
- Your Harvest Batch waste can be reported for the whole harvest batch.

Finish Batch

1

Date Finished

Date Finished 01/10/2014

Enter the date you finished your Harvest Batch.

2

Batch Selection

Batch Mondays Harvest

Select the batch you have finished packaging from when all of the waste is gone and all of the usable product has been packaged.

3

Finish Batches button

Finish Batches

Select the finish batches button to save your entries and exit the screen. This will remove the Harvest Batch from your screen. Should you make a mistake, please switch to the Inactive Tab to the right of Harvest Tab and highlight the finished harvest batch and click the Unfinish Button to bring that harvest batch back to active.

Remember:

- When a harvest batch is complete, it is very likely to have remaining weight, this is attributable to moisture loss.

After all the product is packaged and no waste remains in the Harvest Batch, finishing the batch will take the remaining balance to "moisture loss".

Moving Plants

Moving Plants is one of the most flexible areas in Metrc with 3 different options. Franwell has provided this flexibility to allow customers to use the functions in the best way to fit their operational environment.

Option 1: Single Plant Move

The simplest way to move plants in Metrc is with a single plant move. A single plant can be moved by using the change growth phase button as shown in figures 1 and 2 below. You can either select the tag from the magnifying glass, inside the change growth phase form as shown in figure 1, or by highlighting the tag number in the user interface turning the field orange and then selecting the form, which will populate the plant ID number automatically as shown in figure 2.

Figure 1

Figure 2

Option 2: Multiple Plant Move

To select multiple plants you can use the control or shift buttons on your computer in conjunction with your mouse to highlight all of the plants you would like to move. Simply hold down the control key and use the left key on your mouse to choose the individual plants as

shown in figure 3.

Change Room Change Growth Phase Assign Tags Replace Tag Destroy Plants Changes by Room

▶ ABCDEF012345670000000008	Spring Hill Kush	Plants Room 1	
▶ ABCDEF012345670000000009	Spring Hill Kush	Plants Room 1	
▶ ABCDEF012345670000000010	Spring Hill Kush	Plants Room 1	
▶ ABCDEF012345670000000011	Spring Hill Kush	Plants Room 1	

Figure 3

By using the control key you can pick specific plants based on need. A user can pick as many plants as they choose.

You can select multiple plants in order by using the shift key and selecting the beginning and ending plant you would like to move as shown in figure 4. This will allow the user to select large groups of plants at one time.

Change Room Change Growth Phase Assign Tags Replace Tag Destroy Plants Changes by Room			
Tag	Strain	Room	
▶ ABCDEF012345670000000001	Spring Hill Kush	Plants Room 1	
▶ ABCDEF012345670000000002	Spring Hill Kush	Plants Room 1	
▶ ABCDEF012345670000000003	Spring Hill Kush	Plants Room 1	
▶ ABCDEF012345670000000004	Spring Hill Kush	Plants Room 1	

Figure 4

A user can also use both the shift and control keys to select a large group and then add or remove a number of individual plants.

Once you have selected the plant ID number(s) you want to move, click the Change Growth Phase button. This will bring up the Change Plant Growth Phase form. Select the New Phase from the New Phase dropdown window, and if applicable choose the New Room from the New Room dropdown menu. Next enter the date the plant(s) are to be moved to the new phase as shown the figure below.

Please note, this option is available in both the Vegetative and Flowering windows in the plants section of an OPC/Producer.

The screenshot shows a dialog box titled "Change Flowering Plants Growth Phase". It contains a "Template" section at the top with fields for "New Phase", "New Room", and "Growth Date", each with an "apply" button. Below this are three sections for individual plants, labeled "Plant # 1", "Plant # 2", and "Plant # 3". Each plant section has fields for "Plant ID", "Replace Tag (optional)", "New Phase", "New Room", and "Growth Date". At the bottom, there are "Add (+)" and "Subtract (-)" buttons, and a "Change Phase" button with a "Cancel" button next to it. Numbered callouts point to various elements: 1 points to the "New Phase" dropdown in the template; 2 points to the "New Room" dropdown in the template; 3 points to the "Growth Date" field in the template; 4 points to the "Plant ID" dropdown in Plant #1; 5 points to the "Replace Tag" dropdown in Plant #1; 6 points to the "Subtract (-)" button; 7 points to the "Add (+)" button; 8 points to the "Cancel" button at the bottom right.

You still have the ability to add or remove plants from this group by using the Blue Add (+) or Subtract (-) buttons before completing the change.

1

New Phase

A close-up of the "New Phase" dropdown menu, which currently shows "- Select -". To the right of the dropdown is a green "apply" button with a checkmark icon.

Select the appropriate phase to move the selected plant to. Selecting the apply button will add the new phase to all of the selected plants.

2

New Room

A close-up of the "New Room" dropdown menu, which currently shows "- Optional -". To the right of the dropdown is a green "apply" button with a checkmark icon.

Select the appropriate phase to move the selected plant to. Selecting the apply button will add the new room to all of the selected plants.

3

Growth Date

 A screenshot of the 'Growth Date' section. It features a text input field labeled 'Growth Date'. To the right of the input field are two buttons: a 'today' button with a calendar icon and an 'apply' button with a checkmark icon.

Select the date of the move. The user can select the today button or enter the date manually. Selecting the apply button will add the new date to all of the selected plants.

4

Plant ID

 A screenshot of the 'Plant ID' section. It shows a dropdown menu with the text 'Plant' followed by the ID 'ABCDEF012345670000000002' and a downward arrow icon.

This window shows the unique ID number of each plant selected. The plant ID number will be populated in sequential order from the orange highlighted list the user initially selected.

5

Replace Tag

 A screenshot of the 'Replace Tag' section. It shows a dropdown menu with the text 'Replace Tag' followed by the option '- Don't assign -' and a downward arrow icon.

The replace tag option is available for any plant that has a missing ID tag. This option is only available on a plant by plant basis.

6

Subtract

The blue Subtract (-) button will remove a plant from the list.

7

Add

The blue Add (+) button will add a plant to the list.

8

Cancel

Select the cancel button to end the operation prior to changing Phase. If this button is used it will eliminate all of the functions performed and return all plants to their prior state before the list was created.

9

Change Phase

Change Phase

Selecting the change Phase button will place all of the plants in the new phase and / or room as it was entered into the fields. Before selecting the change phase button the user should verify all of the information is both correct and accurate.

Option 3: Moving large groups of plants simultaneously

The most efficient way to move a large number of plants is to use the Changes By Room feature. The change by room feature allows a user to change large numbers of plants by room or by phase. This will require the user to utilize the Changes By Room button in conjunction with a room. To use this function to its maximum capability it may require the user to add or modify the rooms they have already created.

In many facilities a room may have multiple groups of plants. It would be acceptable in Metrc to sub divide a room into multiple sections to match what is being grown in that room. For example: Veg. Room Section 1, Veg. Room Section 2, Veg. Room Section 3 etc.

By utilizing this style of room layout, a user could use the Change by Room feature to move large groups of plants simultaneously without having to input information for each individual plant.

The following graphics show two concepts of how rooms could be laid out in Metrc to work with the Changes by Room function.

Figure 1 Figure 2

In figure 1 we have a scenario where a single room houses multiple strains of vegging plants. In figure 2 we have two strains in two different phases. It is permissible in Metrc to use the add/edit rooms feature and create rooms to match a facilities operation. Figure 3 shows how rooms are added while figure 4 shows how to select the room.

Figure 3 Figure 4

Keep in mind that the room can stay the same while only changing the phase of the sections of plants in that room. See figure 5

Figure 5

After the rooms have been mapped out accordingly it is a simple task to perform the new room or new phase function. Simply launch the form in the changes by room feature and select the perform change function. For more information see change by room in the Veg or Flowering sections.

For small numbers of plants that are not ready to move but are contained inside larger groups:

In the event some plants are not ready to move to the next phase or Change Rooms it is still possible to utilize this feature for efficiency. By performing the change by room function the user can move all of the plants to the desired phase or location and then select the plants that are not ready to move or change utilizing the single plant option (option 1). The plants that were not ready to move can simply be moved back to the appropriate phase. Utilizing this technique may still be more efficient than utilizing option 1 or option 2 as shown above.

After completing and verifying all of the information select the Change Phase button to move the plants to the new location and/or phase. The change growth phase functionality exists for both

the vegetative and flowering growth phases both of which are located in the plants section in the OPC/Producer.

Remember

- It is not required to use all of the apply features, you may choose to use only certain areas. This is up to the users discretion. For instance you may not need to change the room only the phase.
 - When you choose the apply button it will add that information to every plant in the list, so make sure you have chosen only the plants you want to change.
 - If a plant was added to the list and the phase or room was changed it can be moved back without any issues.
- You can still add or subtract plants after using the "apply" button. The change will not be completed until after you have selected the "Change Phase" Button.

Packages

Packages

Packages

Metrc is a reporting system with a chain of custody. The packages ID numbers are what allows the product to be tracked from a harvest batch through a transfer to a point of sale system. In order to move any product it must be in a package. You will see, in the transfers section of the manual, it is actually not possible to create a transfer without a package. The following Graphic shows how and where packages are created as well as where packaged product can move to and from.

There are two types of tagged inventory in metrc; Plants and Packages and these two forms of tagged products allow metrc to accurately manage and report the chain of custody between the grow and the sale. The two key terms in the previous sentence are “*report*” and “*chain*”. Let us first focus on the word “Chain”. From the immature plant all the way to the final transfer received at the MMC, metrc will always be able to track a product from one ID number to another. If you can not see a connection from one point to another the chain is broken and the process is incorrect. Please see the graphic below.

The only place where a metric tag does not represent a point in the process is in the OPC, in the Harvest Batch as we saw in the plants section. The harvest batch does not have a tag but still has an ID. The harvest batch ID, is assigned by the OPC or metric will assign it automatically. The harvest batch ID connects the plant ID number to the package tag ID number. In this way we have connected all of the points of the chain of custody tracking from one point to the next. Because of this chain of custody metric allows the person(s) handling the plant, batch or package to “report” on the movement of the product from one stage to the next. Remember, a harvest batch can be made up of many plants. In this way the harvest batch is a many to one relationship. Conversely the harvest batch is a one to many relationship with 1 harvest batch equaling many packages. As we saw in the plants section packages in an OPC are *always* created from the harvest batch.

When creating a package it is also important to remember that packaging is based on the shipping rules. The MED requires that Bud or Shake product be limited to 1Lb. So, each pound of Bud or Shake would require a package tag. However, that does NOT mean that every individual item needs to have a tag on it. For example: 1/4'squarers, 1/8'ths or Ounces can be bundled together to make up a 1lb package that would receive a tag. If a business pre-packages product into ounces, eighths, or quarters, each pre-pack could be bundled into a 1lb package with one unique package tag. Infused products can have multiple, mixed items in each package. Each individual item does not require a unique tag. Remember metric does not set rules so please refer to the regulations to ensure your packages are in compliance.

When you are creating a package for new Bud or Shake products it should NOT be done in this area. Creating new packages for Bud or Shake should come from the harvest batch. This is accomplished from the Plants Section, Harvested Tab, Create Packages (see create package page). The chain of custody requires the package be associated to the harvest batch and by creating a package in this area it will NOT refer to the harvest batch.

1

Active Tab

Active

Active Tab shows what active packages are currently in a business facility.

2

On Hold Tab

On Hold

On Hold Tab shows what packages are currently on Administrative hold by the MED.

3

Inactive Tab

Inactive

Inactive Tab shows all packages that have been discontinued or finished and are no longer active in a business facility.

4

New Packages button

New Packages

The new package area in practice is a re-package used for Infused Products or re-packaging of existing products. Select New Packages in this area for the following reasons:

- Create a New Package by combining other existing packages like shake from bud jars.
- Create an intermediate package for use in other packages (Example: MIP creates butter from shake or brownies from butter)

5

Submit for Testing button

Submit for Testing

Submit for Testing button is used to create test samples of a product that is to be sent to a testing lab. For more information regarding testing samples see the Testing for more details.

6

New Transfer

 A rectangular button with a light gray background and a thin black border, containing the text "New Transfer" in a standard sans-serif font.

New Transfer is used by clicking one or multiple packages that need to be transferred, then clicking on the New Transfer button. This will put those packages onto a manifest transfer for you. See Transfers for more details.

7

Adjust Packages button

 A rectangular button with a light gray background and a thin black border, containing the text "Adjust Packages" in a standard sans-serif font.

The Adjust Packages button is used to adjust existing packages a user has either created or received via a transfer that had an error. The use of the adjust package button should not be used to change the quantity after a sale or when splitting a package. See adjust package page for more details.

8

Finish Packages button

 A rectangular button with a light gray background and a thin black border, containing the text "Finish Packages" in a standard sans-serif font.

Finish Packages button is used to finish an active package(s). In order to finish a package, the quantity or weight must be zero and the package cannot be on administrative hold by the MED.

9

Package Details

 A horizontal header bar with a light gray background. It contains several labels with small downward-pointing arrows to their right: "Tag", "Harvest", "Item", "Category", "Quantity", "Prod. Batch", "Lab Testing", "On Hold", and "Date".

These fields will show you the corresponding information for that particular package. Each of these fields can be searched, sorted or filtered.

10

Drop Down Arrow

The Drop Down Arrow to the left of the package ID number will show all of the details for

that package. Details include:

- The type of transaction that occurred Ex. package movement, package adjustment, sale etc.
- User that made the transaction
- Date and time the transaction occurred.

11

Discontinue button

The Discontinue package button is to remove a package that has been created in error. Once a package has been modified in any way or transferred it can no longer be discontinued.

Package Definition - The amount of marijuana or marijuana infused product that may be sold, processed or transferred and must be placed into one or more containers, each container having its unique RFID tag.

Remember:

- There are two types of tagged inventory in metrc; Plants and Packages.
- Packages are created from immature plants, harvest batches or other packages.
- An immature plant can be packaged and transferred to an MMC for sale.
- The system allows for any package to be “re-packaged” into smaller units for sell or combined into larger packages for transfer.
- Once a package has been adjusted in any way it can no longer be discontinued.
- A package must exist in order for it to be selected for transfer.
- Transfers are real-time inventory dependent.
- The Most commonly used re-package in an MMC is converting bud to shake leftover from from jars.
- Returned product to a MIP will require a new tag to transfer back, unless the entire package is being returned.
- Packages only need to be created when product is ready to be transferred.

New or Re-Packaging

The new package area in practice is a re-package used for Infused Products or re-packaging of existing products. This is not used for rolling packages together. You would not create a new Package without selecting the additional package in this area. When you first open the package screen you will see the window below. You should first select the existing packages that you are pulling from in order to make the new product for your package.

The screenshot shows the 'New Packages' window. At the top, it says 'New Package # 1' with a '(clear)' button. Below this are input fields for 'New Tag' (with a placeholder 'Type part of the Tag number...'), 'Item' (with a placeholder 'Type part of the Item name...'), 'Quantity' (with a placeholder 'ex. 100.23' and a '- Select -' dropdown), and 'Package Date' (with a calendar icon, 'mm/dd/yyyy' placeholder, and a 'today' button). There is a checkbox for 'Production Batch'. A blue '+' button is at the bottom left. At the bottom right are 'Create Packages' and 'Cancel' buttons. A '(contents)' button is next to the 'New Tag' field.

This form creates the fields for the new package you will be creating. You can choose to enter the information before or after you select the Blue Add (plus) button. Please notice next to the Add button the word *contents*. The word *contents* lets the user know that when you select the Add button, additional package fields will become available for you to choose the contents from which you will be making the new package. A user can select as many existing packages as required to make the new package by selecting the Add (plus) contents button at the bottom of the page. Every time a new package is added another Add button will appear at the bottom of the page. The expanded form is shown below.

This screenshot shows the 'New Packages' window with numbered callouts (1-11) pointing to specific elements:

- 1: New Package Tag ID (points to the 'New Tag' field)
- 2: New Package Item (points to the 'Item' field)
- 3: New Package Quantity (points to the 'Quantity' field)
- 4: New Package Date (points to the 'Package Date' field)
- 5: Existing Package ID (points to the 'Package # 1' dropdown)
- 6: Existing Package Item (points to the 'Item' field for Package # 1)
- 7: Existing Package Quantity (points to the 'Quantity' field for Package # 1)
- 8: Remove Package button (points to the minus button next to Package # 1)
- 9: Add Another Package button (points to the '(contents)' button)
- 10: Add Another New Package button (points to the '+' button)
- 11: Create Packages button (points to the 'Create Packages' button)

1

New Package Tag ID

New Tag

Select the new Package Tag ID number from the pull down menu.

2

New Package Item

Item

Select the New Item the package will become. This will be populated from the items you created in the Admin section.

3

New Package Quantity

Quantity

This will be the new quantity of the package. If you will be making this from multiple packages take extra care in making sure the units of measure match and the quantity is correct.

4

New Package Date

Package Date

Select the date for the new package.

5

Existing Package ID

Package # 1

This will be the package the material is being pulled from to create the package. Please take extra care to make sure the package is the correct package you wish to pull from.

6

Existing Package Item

Item

This field describes the contents of the package the materials are being removed from. This field is fixed and cannot be changed and reflects the package contents when it was created.

7

Existing Package Quantity

Quantity

This is the quantity of material you are pulling from the existing package. Please take caution to ensure this is correct. Please note the contents removed from this package are not done automatically. The user will need to put the content amount in the field. When putting the amount in the the user should not use - Negative numbers.

8

Remove Package button

This will remove the package from the form. This would typically be used if the wrong package was chosen.

9

Add Another Package button

The Blue Add (plus) button is used to add an additional content package if needed. A user can add as many packages as required to create the new package.

10

Add Another New Package button

If you are creating multiple packages from multiple packages you can add another new package. When using this feature, you must add the contents package you are pulling from even if it is identical to the the package previously entered in the new package above.

11

Create Packages button

Once you have finished creating the package you will select the Create Packages button to save your entries and record the new package.

Remember:

- The only time you would combine packages in a Dispensary/Retailer would be when you are creating a pre-roll package.
- Create an intermediate package for use in other packages Example: MIP/Processor creates butter from shake or brownies from butter. The package ID numbers can be used to act as a Lot or Batch number.
- From the existing package, the contents removed from this package are not done automatically. The user will need to put the contents amount in.
- When putting the amount for removal into the existing package the user should not use - Negative numbers.
- The chain of custody may not be broken. So if you repack a product you must indicate the contents.
- All packages from a Harvest Batch are created from the Harvested Tab under the Plants area.

Splitting Package

Splitting packages is very similar to re-packaging. In this case you will need to reverse the process as shown in the re-packaging section. Simply select the package you wish to split and create as many new packages as desired from the original package as shown in the graphic below.

The screenshot shows the 'New Packages' window. At the top is a 'Template' section with fields for Item, Unit of Measure, Production Batch, and Package Date. Below this are two sections for 'New Package # 1' and 'New Package # 2'. Each section has fields for New Tag, Item, Quantity, Production Batch, and Package Date. There are buttons for 'Add', 'Remove', and 'Create Packages'. Callouts with numbers 1 through 5 point to specific elements: 1 points to the 'Origination Package' field, 2 points to a 'Drop-Down' menu, 3 points to a 'Remove button', 4 points to an 'Add button', and 5 points to the 'Create Packages' button.

1

Origination Package

Package # 1

Select the package you wish to break into new package. Remember the quantity you will enter into the origination package will be the entire quantity for all of the packages you will be creating. As an Example shown above. If you were creating 3 new packages of 4 ounces each from a 16 ounce package you would create 3 new packages of 4 ounce and enter 12 ounces in the original package. This would leave the original package as 4 ounces.

2

Drop-Down

New Tag

Select the new package and complete all of the fields including: New Tag ID, New Item, New Quantity and Date.

3

Remove button

The Remove Button (Minus) will take away a package that has been added to the form.

4

Add button

The Add Button will add a new package to the form.

5

Create Packages button

Once the new packages are created, select the Create Packages button to complete the transaction.

Remember:

- You can make multiple packages from multiple packages. For example, if you had 10 partial bags of strain specific shake you could create 2 new full bags of non-strain specific shake.
- You cannot combine multiple strain specific bud packages into a single package.
- As an infused product manufacturer, you can add multiple items into a single package as long as they are the same category. This is where you can create a shipment of multiple items from a large batch or lot of products.
- The first package from a Harvest Batch is created from the Harvested Tab under the Plants area.

Adjust / Discontinue Package

Adjustments to a package are available when something has occurred to a package that causes the package to be in a state that conflicts with what has been recorded in Metrc. A package should not be adjusted for sales or re-packaging reasons. The reasons categories for packages adjustments were created by the State and cannot be changed or altered without the guidance of the State.

The screenshot shows the 'Adjust Packages' window. It contains the following elements with numbered callouts:

- 1** Package ID Number: Points to the 'Package' input field.
- 2** Quantity: Points to the 'Quantity +/-' input field.
- 3** Adjust Date: Points to the 'Adj. Date' input field.
- 4** Adjustment Reason: Points to the 'Reason' dropdown menu.
- 5** Note Section: Points to the 'optional Note' text area.
- 6** Adjust Packages button: Points to the green 'Adjust Packages' button.

1

Package ID Number

Package

This is the field you will choose when you have found a package with an error that requires an adjustment.

2

Quantity

Quantity +/-

The Quantity Fields are where you will select the weight or item count adjustment you want to make to the package. Please remember you must keep the unit of measure consistent to the package.

3

Adjust Date

Adj. Date

The adjust Date button will indicate the date the package was adjusted. You can select the date button or enter manually.

4

Adjustment Reason

Reason

From the drop down menu Select the reason for the package adjustment. Please see your State Supplemental for package adjustments/action reasons.

5

Note Section

(optional) Note

Note section is an optional section that will allow you to explain the adjustment to the State and the circumstances the adjustment was needed.

6

Adjust Packages button

Adjust Packages

Select adjust packages to record an adjustment to a package.

Remember

- Discontinuing a package will eliminate it permanently.
- A package can be adjusted in the receive transfer area as well. See receive transfer for more details.
- Adjusting a package is only meant to adjust a package that has an error, not for use to reconcile inventory or your POS system.

Discontinuing a package will clear the package and it will disappear from the user screen. You may use the discontinue package when you need or want to permanently eliminate a package. You cannot use this option if you have recorded any transaction out of the package such as a sale, transferred the package or made an adjustment. You will be prompted one final time before the package has been discontinued. See image below.

Processor Packages Notes

The following information may be helpful to some Infused Products Manufacturer's. Franwell is providing this as assistance for use as functionality that may prove helpful for Lot or Batch tracking in Metrc. It is required that the chain of custody exist between the marijuana product and final infused product through to the final sale. This chain of custody must be visible through the Metrc system.

For incoming packages used by a Processor, in an intermediate step such as making concentrate to be used in multiple infused product batches, create a new package for the concentrate. The new packaged concentrate may then be partially used in an infused product, making it more easily recorded as content to the finished infused product package.

The Processor process is similar to a harvest batch only a bit more complex. In the typical plant harvesting process, the Harvest Batch exists as one intermediate step in between the package and sellable product. In the case of a Processor we may have multiple intermediate steps. Please see graphic below.

In this graphic you can see how several bags of Flower and Trim were transferred into the Processor from another location via the transfer process. The shake was then converted to an intermediate product (Production Batch of Concentrate) for use in a larger batch. In the example above we could call it butter. The butter then is used to bake a large batch of cookies say, 1000. The larger batch of 1000 cookies is then broken down and packaged with other products to be transferred and shipped. Using this example it is critical to understand that each intermediate step requires a new package tag. If you follow the process above you can see how each tag ID is connected to each tag ID that preceded it and how the "chain" is kept intact.

Accomplishing this task is done by using the packaging function in Metrc. Selecting the package

function will bring up the new package form. Creating the new package will provide the chain of custody.

The screenshot shows the 'New Packages' form. Callout 1 points to the 'New Package' header. Callout 2 points to the 'Production Batch box' which includes a checkbox and a date field. Callout 3 points to the 'Existing Package 1' field. Callout 4 points to the 'Existing Package 2' field. Callout 5 points to the 'Existing Package 3' field. At the bottom, there is a 'Create Packages' button and a 'Cancel' button.

1

New Package

New Tag

New package to become a concentrate or other production batch like butter or oil shown in the example

2

Production Batch box

☐ Production Batch

Production Batch box is used when you create a package of a new Production Batch. A Production Batch is a group of weight or count based product that is created from either raw marijuana material or marijuana infused concentrate which produces a new and completely different product.

3

Existing Package 1

Package # 1

Quantity

Existing bag of Flower or Trim

4

Existing Package 2

Package # 2

Quantity

Existing bag of Flower or Trim

5

Existing Package 3

Package # 3

Quantity

Existing bag of Flower or Trim

6

Create Packages button

Create Packages button will create the package of the new concentrate or production batch.

If we use the example of a cookie as discussed above we would have many ingredients, oil, flower, water, sugar etc. With this in mind it is important to understand the Metrc system is only designed to track one of these components, the Marijuana. This process can be repeated multiple times to allow for as many multiple intermediate steps as required accounting for the Processor's process. Because Metrc only tracks the one component, the ID numbers attached to the batch of cookies and the concentrate (in the use case above butter) that made up the batch will chart the chain of custody. In this way the Metrc system accounts for the entire chain of custody from seed to sale for the marijuana component of the finished product.

Item Detail

The item detail area of Metrc provides extensive detail about a specific item, be it a package, transfer or plant. Because Metrc is a chain of custody system, each transaction that occurs regarding an item with an ID number has a record along with the characteristics of the transaction. Information included in a package event store can include the harvest batch the package came from, the person who created the package, any edits or adjustments to the package and the transfer history of the package. It is for this reason that anyone with Metrc access should not allow anyone to perform any data entry tasks under their profile.

The screen below shows a typical series of transactions for a package.

Multiple instances of a plants history can be show from one screen.

1

Drill-Down Arrow

The Arrow next to a plant or package tag will open up to show additional details about the particular ID number. Selecting the arrow once will open it and selecting the arrow twice will close it.

2

Tool Bar

Description

The tool bar across the top of the Drill Down Feature allows the user to identify the different attributes for viewing of the particular item being shown.

3

Filter button

The filter button allow you to search for more information about that particular area. For more information about the search function chapter of this manual.

Transfers

Transfers

Transfer

The Transferring of a package is a key component in the chain of custody in the metrc system. The graphic below shows the transferring process between the different types of facilities and how products move within metrc.

Important Note: The metrc system is a tool used by the industry and monitored by the MED. Metrc does not define or supercede any rule or regulation. A licensee should always verify a transfer is in compliance with all applicable rules and regulations put forth by the MED before completing a transfer.

There are several important points to keep in mind:

- Any movement from one facility license to another requires a transfer and a corresponding manifest generated by metrc.
- A package must exist in order for it to be selected for transfer.
- A transfer must be created anytime a package moves from one physical location or facility license to another.
- A transfer manifest is still required even if the two facilities are located in the same building. So if you have an OPC and an MMC operating the business, when you transfer a package it still requires the transfer manifest. This is how the chain of custody is maintained.
- Transfers are real-time inventory dependent.
- A package must be received completely, the system does not allow for partial package receipt.
- A transfer can be rejected by package or completely.
- A rejected package will require the originating Licensee to receive the package back into their custody.
- If you receive a package you will have the opportunity of reporting a new weight.
 Note: a new weight will raise an exception in the MED reporting.
- You must receive the transfer immediately. If not received within 24 hours, it will create a notification to the MED.
- If you have any questions at all about the transfer; you should reject it.

6

Vehicle Information**Vehicle Info**

The Vehicle Information field shows the vehicle assigned to perform the delivery along with the other corresponding information.

7

Packages**Packages**

The Packages field shows the number of packages being moved in that transfer along with the other corresponding information.

8

Estimated Departure**Est. Departure**

The Estimated Departure field shows the time the transfer is supposed to leave the point of origin entered into the transfer manifest for that particular transfer along with the other corresponding information.

9

Estimated Arrival**Est. Arrival**

The Estimated Arrival field shows the time the transfer is supposed to arrive at the destination entered into the transfer manifest for that particular transfer along with the other corresponding information.

10

Received**Received**

The Received button shows the time the recipient of the transfer selected the receive button in metrc. This may or may not actually correspond to the drop off time. It is important for the receiving licensee to select the receive button as soon as they have received the product to avoid discrepancies.

11

Manifest**Manifest**

The Manifest field shows a list of all of the manifests for that particular facility along with the corresponding information.

12

License Number**403-01023**

The License Number shows the originator of the transfer along with the other corresponding information.

13

Drop-Down Menu Arrow

The Drop Down Menu Arrow indicates the file has more detail available to see. By selecting this arrow the user can see the events related to this transaction. In this case, you can see all of the packages and items associated with a particular transfer.

Creating a Transfer

All information entered into the manifest fields are required and can be saved and printed in PDF format. You can save a copy of the manifest for your records if you choose but it is not required. You will also need to print a copy for the driver. Please be sure you read all of the rules and regulations regarding transferring and transfer manifests provided by the State to ensure your transfer is in compliance. Please see your State Supplemental for any extra boxes, dropdowns or choices that your State may have added to the transfer manifest page.

The screenshot shows the 'Add Transfer' form with the following numbered callouts:

- 1: Lookup Drop Down
- 2: Driver Information
- 3: Destination Drop Down
- 4: Vehicle Information
- 5: Vehicle Lookup Drop Down
- 6: Transfer Type Drop Down
- 7: Transfer Schedule
- 8: Planned Route
- 9: Package Drop Down
- 10: Submit button
- 11: Add button (Package)
- 12: Add button (Destination)
- 13: Register Transfer button
- 14: Package # 1
- 15: Package # 2
- 16: Item Description

1

Lookup Drop Down

The Lookup Drop Down will provide the user with a list of drivers that have been previously entered into Metrc. Every time a driver is entered for the first time the information associated with that driver will be added for future use. The driver information includes Badge number/Handler's Permit or Username, Driver's Name, and Driver's Lic. No. but is not associated to the vehicle.

2

Driver Information

The first time you use a driver you will need to add their information into Metrc. Please keep in mind you will need to fill this information out completely. After you enter this information it will be saved for future use.

3

Vehicle Lookup Drop Down

The Vehicle Lookup Drop Down will provide the user with a list of vehicles that have been previously entered into Metrc. Every time a vehicle is entered for the first time the information associated with that vehicle will be added for future use. The vehicle information is not associated to the driver.

4

Vehicle Information

Vehicle Make	
Vehicle Model	
License Plate	

The first time you use a vehicle you will need to add the vehicle information into Metrc. Please keep in mind you will need to fill this information out completely. After you enter this information it will be saved for future use.

5

Destination Drop Down

Destination 1

The Destination Drop Down menu is used to select the location you will be shipping to. You can not enter a location, you can only select from the menu. All actively licensed businesses are located in this list. The menu is sorted in numerical order by license number.

6

Transfer Type Drop Down

The Transfer Type Drop Down specifies the kind of transfer you are performing. Transfer types include: Infusion - Transferring to a Processor that is Processing for your own Dispensary/Retailer, Transfer - for transferring from any facility to a Testing Lab or any licensed facility that a facility it is connected to (such as OPC/Producer to their Dispensary/Retailer) and Wholesale for Transferring to another licensee. Please see your State's rules and regulations as to the type of transfers that are allowed for your license type.

7

Transfer Schedule

Est. Departure 02/06/2014 today

08 : 30 AM

The Transfer Schedule allows you to put in the estimated date and time for the departure and expected date and time for the arrival for the shipment. You may manually enter data or use the calendar functions.

8

Planned Route

Planned Route

The planned route field is used for each specific leg of a transfer. If the transfer is going from one location to another only one route will need to be entered. If the transfer is a multipoint transfer, a field for each leg of the transfer will need to be completed. The field shown will only be for the individual leg of the transfer.

9

Package Drop Down

Package # 1 ABCDEF012345670000000265

The Package Drop Down allows you to pick the packages if they were not previously chosen from the packages screen.

10

Item Description

Shake

The Item Description field shows the contents of the package selected in the corresponding package ID number. This description is designed for use as a validation by the user. If the item description does not match the desired contents the user should verify they have selected the correct package. The item description can not be changed or altered by the user.

11

Subtract button

The black Subtract (minus) Button will remove the corresponding package from the transfer manifest.

12

Add button (Package)

The black Add (plus) Button will add additional packages to the manifest. A user should only add packages to that manifest for the particular destination they are traveling too. If you have multiple destinations a user should add the packages for each destination under that destination and not all packages under one destination. A user can add as

many packages for that destination as required.

13

Add button (Destination)

The blue Add Button will add an additional destination. When a new destination is added new fields will be shown for the user to complete. The new fields will include destination, route, schedule and package. The user will not need to adjust or change the driver or vehicle information.

14

Register Transfer button

The Register Transfer Button will finalize the manifest creation process and make the manifest available to all parties named in the transfer.

After a transfer has been registered it will be viewable by the licensee who created it as outgoing, by the company receiving it as incoming and by the State. Transfers can be scheduled in advance for as many facilities as desired and for as many packages as needed as long as the transfer meets regulations.

Remember:

- A transfer can not be generated for a package that has not been created. Only live packages can be added to a transfer manifest and shipped.
- The packages for delivery should correspond to the destination they are assigned to.
- Metrc is a reporting system. All transfers should be completed based on all applicable rules and regulations put forth by the State. Metrc does not replace, alter or change any rule or regulation. If you have questions about how you should be manifesting product please refer to the State.

Modifying or Voiding Transfer

A transfer can be changed, modified or voided any time a licensee chooses to do so, up until the time it leaves the facility. Once the transfer process has begun the transfer may not be modified. The product being transferred will remain the responsibility of the business that originated the transfer and will not be entered into the recipients possession until the receive button is selected by the recipient. You may edit each of the transfer fields in the Metrc transfer to the same level of detail as when the transfer was created. Edits may be completed for a variety of reasons including: Error correction, Changes in destination, Changes in product etc. The Voiding of a transfer will permanently eliminate the transfer and move the product back into the originators inventory. The transfer process is a key component of the chain of custody and modification to a transfer manifest should be handled accordingly.

The screenshot shows the 'Edit Transfer' form with the following fields and buttons:

- 1 License and Vehicle:** Points to the 'Occupational' field (value: MXXXXX).
- 2 Destination:** Points to the 'Destination 1' dropdown (value: 402-00375 PATIENTS CHOICE OF COL) and the 'Planned Route' text area (value: Up, Down, Left, Right, Forward, Back).
- 3 Transfer Type:** Points to the 'Type' dropdown (value: Transfer).
- 4 Schedule:** Points to the 'Est. Departure' and 'Est. Arrival' date and time pickers.
- 5 Package button:** Points to the 'Package # 1' dropdown (value: ABCDEF01234567890000000000).
- 6 Add Package button:** Points to the '+ package' button.
- 7 Add Destination button:** Points to the '+ (destination)' button.
- 8 Save Transfer button:** Points to the 'Save Transfer' button.

1

License and Vehicle

Occupational MXXXXX

Vehicle Make Ford

License and Vehicle can be changed as required.

2

Destination

Destination 1

The Destination of a transfer can be changed. In the Destination area, select a new location and a new planned route. Remember the destinations in the pull down menu are listed in numerical order by business license number.

3

Transfer Type

Type 

The Transfer type can be modified if the ordinal information was entered incorrectly or if the package is being redirected for a new purpose.

4

Schedule

Est. Departure 

:

The schedule can be adjusted if the transfer has been delayed or moved to an alternate time.

5

Package button

Package # 1 

The package pull down can be used to change the package. If you need to add a package you can select the black Add (plus) button and a new pull down will appear you can use to add an additional package. You can add any package to the manifest required. Removing the package from the transfer will put the package back into the transfer originators inventory.

6

Add Package button

If you are sending more than one package, then you can use the Add Package button to add another package to the Transfer.

7

Add Destination button

If the Transfer is being modified to add an additional destination, selecting the blue Add (plus) button will create a new destination. Please remember that all of the required fields for a new destination will need to be filled out. Please also remember to put the appropriate package information under the corresponding destination.

8

Save Transfer button

Once you have completed the modifications, select the Save Transfer button to finalize

the transfer.

Remember

- New packages can be added or packages may be removed. However, even though you can add or remove packages you cannot adjust the package from the transfer screen. If a package needs to be adjusted you will need to remove the package from the transfer to make the adjustment. If you want to add the package back to the transfer you may do so after it has been adjusted.
- Each field with the filter symbol can be reviewed and searched (see search functions for more details).
- You can select the Drop Down Menu Arrow to review all of the information about that manifest (see graphic below).

Manifest	Driver	Vehicle Info	Stops	Packages	Employee	Date Created	
0000000301	Fred Flintstone	Make: Dodge Model: Viper Lic Plate: XYZ-987D	1	2	MATTHEW HURON	02/07/2014 09:17 am	Edit Void

Destination	License No.	Route	Est. Departure	Est. Arrival	Received	Packages
My OtherMMC	400-00680	It's just a jump to the left and a step to the right.	02/01/2014 09:00 am	02/01/2014 10:00 am		2

Voiding A Transfer

Voiding a Transfer can only be completed by the originating business. To Void the transfer the user will need to navigate to the outgoing tab on the transfers screen. Simply locate the void button associated with the proper transfer and select the Void button (see the graphic below).

Manifest	Driver	Vehicle Info	Stops	Packages	Employee	Date Created	
0000000301	Fred Flintstone	Make: Dodge Model: Viper Lic Plate: XYZ-987D	1	2	MATTHEW HURON	02/07/2014 09:17 am	Edit Void

When you have selected the Void button you will receive a prompt asking you to confirm your decision. Simply select the OK button to confirm.

Once a transfer has been voided it cannot be reinstated and all of the associated packages will be returned to the transfer originators inventory.

Receiving a Transfer

Receiving a Transfer is the exchange in the chain of custody. Once the recipient has selected the receive button, that business has accepted the package and thus taken responsibility for it. Incoming transfers can come from your facility or any company you do business with. You have three options with incoming transfers: Review, Receive or Reject. In the screen below you can see both the receive button and the manifest review.

Manifest	License	Origin	Driver	Vehicle Info	Packages	Est. Departure	Est. Arrival	Received
0000000000	403-01023	SWEETWATER PARTNERS LLC	X	Make: X Model: X Lic. Plate: X	10	01/26/2014 02:10 pm	01/27/2014 02:10 am	Receive

Package	Item	Shipped Qty	Received Qty
ABCDEF012345670000000361	Shake	1 oz	
ABCDEF012345670000000362	Shake	1 oz	
ABCDEF012345670000000363	Shake	1 oz	
ABCDEF012345670000000364	Shake	1 oz	
ABCDEF012345670000000365	Shake	1 oz	

By selecting the Drop Down Menu Arrow to the left of the transfer Manifest ID number, you can see and review the contents of the shipment prior to taking receipt of the packages.

On the right hand side of the transfer manifest you can select the receive button. Selecting the receive button will not accept the transfer but instead will launch the editable receive transfer screen.

Driver Information

Occupational: MX1000
Driver's Name: Fred Flintstone
Driver's Lic. No.: DL 123456789
Phone No. for Questions: 303-555-1212
Vehicle Make: Dodge
Vehicle Model: Viper
License Plate: XY12 - 9870

Package Information

Package # 1: ABCDEF012345670000000001
Item: Bottle
Shipped Qty: 1
Receive Qty: 1
Reject Package: ☐

Package # 2: ABCDEF012345670000000002
Item: Bottle
Shipped Qty: 1
Receive Qty: 1
Reject Package: ☒

Receive Transfer button

Shipped / Received Quantity

Reject Package

1

Driver Information

Occupational: MX1000

Vehicle Make: Dodge

As a best practice the recipient should verify the Occupational License and Vehicle information of the delivery person before receiving the transfer.

Metrac User Manual Rev 7.0

2

Package Information

Package # 1	ABCDEF012345670000000241
Item	Buds

This will show the package ID number and contents of the package. This should be verified prior to receiving into Metrc.

3

Shipped / Received Quantity

Shipped Qty.	1	oz	Reject Package ☐
Receive Qty.	1	Ounces v	

The Shipped Quantity will show the amount of the product that was recorded when the package was created. Metrc will automatically populate the same product quantity in the Receive Quantity field as the package had when it was created.

If the Shipped Quantity does not match the Received Quantity the recipient has two choices:

- Adjust the package in the Receive Quantity field to the correct the variance.
- Reject the package.

If the user accepts the package the adjustment will show in Metrc (See picture below package ending in 241).

0000000301	403-01023	SWEETWATER PARTNERS LLC	Fred Flintstone	State: Dodge Model: Viper Lic Plate: XYZ-987D	2	02/01/2014 09:00 am	02/01/2014 10:00 am	02/07/2014 02:45 pm	
Package									
				Item		Shipped Qty.		Received Qty.	
ABCDEF012345670000000241				Buds		1 oz		2 oz	
ABCDEF012345670000000242				Buds		1 oz		1 oz	

4

Receive Transfer button

Receive Transfer

Selecting the receive transfer button will accept the transfer and move the packages into the recipients inventory.

5

Reject Package

Shipped Qty.	1	oz	Reject Package ☒
--------------	---	----	--

A single package can be rejected from a transfer without having to reject the entire transfer. Simply check mark the reject package box next to the corresponding package. When you reject a package the received quantity and unit of measure will disappear.

Any package not check marked will be received. At that point you can accept the transfer and the rejected package(s) will remain in the custody of the sender.

To Reject the entire transfer select all of the packages in the transfer and select the receive button.

The process button is for use by the business who has the rejected packages. If the packages have been rejected, the process button will bring the packages back into the inventory of the company who initiated the transfer who's packages were rejected. So if you have a rejected package as the sender, you will have to select the process button to put the packages back into your inventory.

New Transfer		View Manifest								
Incoming		Outgoing		Rejected						
Manifest	License	Origin	Driver	Vehicle Info	Packages	Est. Departure	Est. Arrival	Received		
0000000401	403-01023	SWEETWATER PARTNERS LLC	Fred Flintstone	Make: Dodge Model: Viper Lic. Plate: XYZ - 9870	1	02/07/2014 05:04 pm	02/07/2014 05:05 pm	02/07/2014 05:05 pm	Process	

Remember

- Once the recipient has selected the receive button, they are responsible for the package and its contents in whatever condition it may be in.
- It is in the best interest of the recipient to verify the contents of the package before receiving the package in Metrc.
- Packages can be adjusted in the receive transfer process.
- There is not a "Reject Transfer" button, transfers are rejected by package.
- A business processing a rejected package or transfer will use the process button to move rejected packages back into their inventory.
- Make sure you are in compliance with all of the applicable rules and regulations set forth by the State.

View a Manifest

A manifest can be viewed by selecting the View Manifest Button. The view Manifest button is available in incoming, outgoing and rejected screens. You will need to select the manifest before you select the View Manifest Button. You can see all of the details of the manifest without having to view it by selecting the Crop Down Arrow Button next to the corresponding manifest number.

Once you have highlighted the appropriate Manifest and selected the View Manifest Button a new tab in your browser will launch and the manifest will open as a PDF file. You will need to allow popups from Metrc to view the manifest.

MARIJUANA ENFORCEMENT DIVISION MARIJUANA TRANSPORTATION MANIFEST			
All sales transactions are to be completed prior to transportation of any Medical Marijuana. The receiving entity may reject product delivered, but amount delivered must be limited to amount agreed upon in prior sales transaction. If the person transporting Medical Marijuana has not yet received his or her occupational license number, put "Pending" in the appropriate field.			
Manifest # :	000000101	Date Completed:	12/31/2013

You can print or save the manifest from the view manifest selection by using your browser print and save buttons. Please remember you will need to print the manifest for the driver before he leaves the facility.

Sales

Sales

Sales

Sales in Metrc are reported by Package Tag ID. So, it is important to understand what a package means in Metrc. The package is a serialized unit. That means every package will need to be accounted for in terms of what happens to the contents. The packages primary purpose is to enforce a secure chain of custody. The package is similar in concept to a “Lot”. For example a package can be made up of many smaller sellable units. As each one of the smaller individual units is sold, the individual sale can be recorded or a summarized total for each package may be reported. The association of a serialized package to a sellable item might be a new concept to you and your system. For integrity during the chain of custody, it is necessary to track each uniquely and individually identified package all the way to its final selling event. You will need to, in your existing system or processes, create a way to associate the Metrc package with sales of items that were contained in the appropriate Metrc package.

Please see your State Supplemental for entering sales into Metrc.

Remember:

- Sales information is only captured when you have selected a Dispensary/Retailer.
- Recording of Sales in Metrc is for “reporting last event in chain of custody”

Testing

Testing

Testing in Metrc

Please see your State Supplemental and rules and regulations for testing within Metrc.

Search Functions

Search Functions

Search Functions

The Metrc system contains a significant amount of data requiring robust search capability. Franwell has developed a search application that provides the ability to search in multiple ways with many variables and minimal data. The following instructions will show you several examples of how to use the search features.

The Arrow Button will change the view from ascending to descending order in the table you are looking at. Each column has the ability to change the view from ascending to descending by selecting the column.

This filter feature allows you to search within each of the individual columns by variables that you indicate. Simply click on the filter button at the top of the column and the search box will open.

The image displays four filter panels arranged in a grid. Each panel is designed for filtering data within a specific column. The panels are as follows:

- Top Left Panel:**
 - Title: Show items with value that:
 - Operator 1: Is equal to (dropdown)
 - Input 1: [Empty text box]
 - Connector: And (dropdown)
 - Operator 2: Is equal to (dropdown)
 - Input 2: [Empty text box]
 - Buttons: Filter, Clear
- Top Middle Panel:**
 - Title: Show items with value that:
 - Operator 1: Is not equal to (dropdown)
 - Input 1: [Empty text box]
 - Connector: Or (dropdown)
 - Operator 2: Is not equal to (dropdown)
 - Input 2: [Empty text box]
 - Buttons: Filter, Clear
- Top Right Panel:**
 - Title: Show items with value that:
 - Operator 1: Starts with (dropdown)
 - Input 1: [Empty text box]
 - Connector: Or (dropdown)
 - Operator 2: Contains (dropdown)
 - Input 2: [Empty text box]
 - Buttons: Filter, Clear
- Bottom Center Panel:**
 - Title: Show items with value that:
 - Operator 1: Does not contain (dropdown)
 - Input 1: [Empty text box]
 - Connector: And (dropdown)
 - Operator 2: Ends with (dropdown)
 - Input 2: [Empty text box]
 - Buttons: Filter, Clear

Once you have entered the information into the fields, select the "Filter" button to start the query. The "Clear" button is used to remove mistyped information or to remove information before a new search is started. You can use one search field to search or both to refine to a greater level of detail.

The variables menus allow you to search by the following parameters:

- **"Is equal to"** - If you know the exact name, number, or term you are looking for.
- **"Is not equal to"** - If you want to capture multiple items excluding one or more pieces of data. For example if you want to search for all business licenses except one facility you would type in the exact facility you do not want to see.
- **"Starts with"** - This feature allows you to search by partial information. If you know the first few letters or numbers of what it is you are looking for.
- **"Contains"** - This feature allows you to search by partial information. If you know some portion of the name or number you are looking for.
- **"Does not contain"** - If you want to capture multiple items excluding one or more pieces of data. You can exclude certain portions of names or numbers.
- **"Ends with"** - This feature allows you to search by partial information. If you know the last few letters or numbers of what it is you are looking for.
- **"And / Or"** - This allows you to add multiple variables to the search parameters to further refine your search.

Example 1: A business License using the upper search field:

- Business License - if you know the exact business license - Search with **"Is equal to"**.
- Business License - if you know the first 3 digits of the license number - Searching by **"Starts with"**.
- Business License - if you know the last two digits of the license number - Searching by **"Ends with"**.
- Business Name - if you know it has a particular word - Search with **"Contains"**.
- The search functions do not allow for the use of wild cards.

Search interface showing two criteria:

- Criterion 1: **Show items with value that:** **Is equal to** (dropdown menu) [Empty input field]
- Criterion 2: **And** (dropdown menu) **Is equal to** (dropdown menu) [Empty input field]
- Buttons: **Filter** and **Clear**

Example 2: A business License using the "And / Or" option:

- Each feature allows you to search single or multiple values.
- If you know the first 3 digits of a license number and the last 2 digits of the license number, you would enter those into the first parameter and the second parameter choosing the **"And"** button.
- If you wanted to see all transfers in a particular month you would put the month in the first parameter and the year in the second parameter while selecting the **"And"** button.

Example 3: A phone number e-mail or Transfer:

- This search option is the same as search parameter one. This field allows you to search by:

"Is equal to", "Is not equal to", "Start with", "Contains", "Does not contain" and "Ends with".

- Phone number - if you know the area code and the last 4 digits of the phone number - Searching by "starts with", "and", "is "equal to".
- E-mail - if you know the company name - Searching by "contains".
- Transfer Date - if you know what date transfers were initiated - Search with "is equal to".

Please remember to always clear your search fields before beginning a new search and also to make sure you are in the correct field you are looking to search for information in.

RFID

RFID

RFID

Radio Frequency Identification (RFID) is a technology that utilizes a tag with a “silicon chip” often referred to as a “transponders” that enables the automatic remote reading, writing and identification of objects that have been “tagged” with the RFID transponders. RFID tags or transponders send out information to a reader, or “interrogator.” The RFID tag contains the silicon chip and an antenna enabling it to receive and respond to radio frequency queries from the RFID interrogator. The tags are small and can easily be attached to or incorporated into a product or device. Passive RFID transponders use the energy from the interrogator to power on the tag and send the return signal back to the interrogator that originated the query. Passive tags usually contain small amounts of information in the range of 96 to 512 bits of information. Active RFID tags use small batteries to assist them in responding to the queries of an interrogator. This allows them to carry significantly more data and send and receive that information over a much larger areas as well.

RFID tags are often seen as a replacement for barcodes, with significant advantages over traditional bar coding technologies. The data capacity of an RFID tag is large enough to allow each tag to have its own unique code. Current bar codes are limited to a single type code for all instances of a particular product. With an RFID tag a product can be individually tracked as it moves from location to location through a process, or through the supply chain. RFID tags can also segment certain areas of information. This allows a user to “lock” certain areas of information while rewriting other areas if they so choose.

RFID Reader

- Generates a radio signal & broadcasts, via its connected antennas configured in an RF field.

A tag passes

- Through the RF field and receives the corresponding radio signal.

Radio signal

- Is received by tag's onboard antenna.

The tag's chip

- Is energized and releases its preprogrammed data.

A portion of the radio signal

- Is modulated and reflected back to reader.

Reader decodes

- Reflected signal, passes data on to the data aggregation device and subsequently on to the host system.

Scanning

RFID - Passive RFID offers a range from inches to several feet and does not require line of sight. This means that individual Tags placed within a carton, packed in a box and stored on a pallet may be read. You do not have to open each box and present the individual item. The RFID chip can hold a large amount of data as well as monitor the movement of the tagged object — acquiring and delivering new information along the way like a traveling database. Greater storage capacity, combined with update flexibility, make smart labels ideal for applications such as product tracking through the supply chain, baggage tracking, or asset tracking.

Simultaneous Scanning

RFID - Standards have algorithms to support simultaneous reading of Tags at one time.

Reconciling

Because RFID has the ability to read multiple tags at one time and each tag has its own unique ID, we can now reconcile to a much better degree what is expected vs. what is actual. For example if we have a stocking location with materials, it can associate all of the items that are that location. When inventory is taken, we have an expected list of items and the ability to identify the exact pieces of material that are missing and then search for those unique ID'd materials. We can also see materials that are in the wrong location allowing us to relocate them to the right location.

Harsh Environments

Tags may be placed in extreme environments and perform to specification. They are very robust to handling, sensitive to environment, and generally degrade once used, stored or handled in a non-office environment. RFID smart labels can be read and written to through dirt, paint, and many nonmetallic objects.

Dynamic Updates

Tags may be written to and offer on board memory to retain information. This feature may be used to store a product calibration history, preventive maintenance, etc. Updates may be made within the blink of an eye and automatically without human intervention. Once a Bar Code is printed it remains frozen. The Code and the process of attaching the BC is not supportive of real time updates. It is a labor intensive process to update any information on a BC once printed.

Search

A RFID scanner has the ability to show only the RFID tags that are being searched for. If a tag ID is entered into a hand held device, the device will read all of the tags but only notify the operator and display the tag ID that is being searched for only when it is read.

FAQ's

FAQ's

FAQ's

Question - Who is Franwell and why are they involved?

Answer - Franwell Inc. was chosen to develop and deploy the Metrc software system for the State based on an RFP in June of 2011. Franwell was chosen by the State after researching the complexities associated with growing, harvesting and processing marijuana and marijuana products. The State determined it would be necessary to find an outside vendor capable of developing a program tailored to these specific regulatory needs.

Question - What is Metrc?

Answer - An enforcement tool developed to track and monitor marijuana inventory within the State's regulated, closed loop Medical/Retail Marijuana regulatory scheme. Metrc (Marijuana Enforcement Tracking Reporting and Compliance) is a web- based application that State Licensees upload marijuana inventory data as required by regulation.

Question - What are the requirements to access the Metrc software?

Answer - Only State licensees (Owners of businesses that hold a State issued Medical or Retail Marijuana business license) will be provided access to the Metrc system. As Metrc is a web-based application, industry members may access the system via any device that allows them to sign-in to the secure Metrc web site via the internet.

Question - What computer requirements are there for accessing Metrc?

Answer - Metrc is a cloud based solution and only requires internet access. Any PC, laptop or tablet device with internet access will work with Metrc.

Question - What is the URL address to access the software?

Answer - https://__.metrc.com, your state abbreviation will go in the blank.

Question - What is my user name?

Answer - The user name is your badge number/handler's permit or username required by your State.

Question - When I login it says, "I can no longer use this key."

Answer - This means the user is trying to login with their welcome email hyperlink. They need to open a new browser window. Type in the URL address: https://__.metrc.com. Then type in their user name and password they set up in their original email. Remember initial login credential emails are only good for 24 hours.

Question - I am getting the error message, "Cannot Access Account".

Answer - When someone forgets their password and clicks on the "Cannot access account" link and the security question comes up with "N/A", what does this mean? That means that they haven't gone through their welcome e-mail. They must go through the welcome e-mail, and will be forced to enter a Security Question and Answer.

Question - Do I need a bar code scanner, RFID device or other hardware?

Answer - No, Metrc was developed specifically so no additional hardware (Bar-Code or RFID) would be needed to work or perform any functional tasks in Metrc. The only hardware needed to operate in Metrc is a mouse. Remember you actually never have to enter the ID numbers in Metrc. The ID numbers are assigned by Metrc when tags are ordered and will show up in your database automatically. Changing phase, changing rooms and all of the other functions using the ID numbers can be done simply by using a mouse click while in the system. No printer is

necessary. Plant and package tags come printed and encoded by Franwell prior to receipt by the licensee. It is not possible to enter a tag ID number into Metrc.

Question – Does Metrc contain patient information?

Answer - There is no patient information contained in Metrc. The patient number is only stored as a reference to the number of plants a business is allowed to grow. These registry numbers and their associated physician recommended plant allowance is the number of plants each Center is allowed to cultivate. Please see your State's rules and regulations as to whether patients are required in Metrc.

Question - I have more than one batch or pod in one room, how do I set this up in Metrc?

Answer - You can set up rooms however you choose. Room designations are only used to track the locations of plants. The room designation can mean a physical room or an area where tags are located. The State is only requiring area designations for auditing purposes so a licensee can account for all the plants shown in that specific area designation.

Question - Is there a requirement to report waste or plant trash pre harvest?

Answer - By rule the answer is yes, however the State will consider feedback on this rule in subsequent rule making processes. In the meantime, licensees should account for this waste outside of Metrc until the rule is changed or Metrc functionality is developed to account for this type of waste.

Question - How are RFID Tags Used with Metrc?

Answer - There are two types of RFID tags that will be used to monitor marijuana inventory; the first is a plant tag that attaches to a security strap that can be used as a plant stake when the plant is in its early growth stage and then as a looped strap once the plant has reached a size that will support the tag; the other is a package tag that is affixed to a package of processed Marijuana or Marijuana product. However, each time a new RFID tag is used it contains information regarding all plants and/or products that are associated with the marijuana or product to which the new tag is attached. This allows the State to track marijuana back to the original plant should a health or safety concern arise.

Question - Do Industry Members have to enter a 24-digit code into Metrc for every plant it grows and every package they generate?

Answer - No, that is one of the benefits of having Franwell provide the tags; once a specific licensee orders RFID tags, those tags are specifically provisioned for that licensee and each tag's 24-digit code is placed in the licensee Metrc account for both plant and package tags. Then a licensee can simply access their account and assign tags to plants or package – with a simple “point and click” the user can assign tags in mass or individually.

Question - Do the RFID tags track the marijuana once someone has purchased it?

Answer - No, State tracking ends at the point the marijuana or marijuana product is sold to a private citizen. Metrc does not track any sales information about who has purchased product.

Question - What about when marijuana is transported from Cultivation to a Store or Product Manufacturer?

Answer - Metrc tracks all marijuana from the point at which a plant is placed in a growth medium to the point it is entered into the inventory at a Dispensary or Retail Store. The system generates transportation manifests that detail each package being transported and all associated RFID tags.

Help & Support

Help and Support

1 Help and Support Drop-Down Menu

The Help and Support Menu provides all of the information about how to contact Franwell and the Support Functions along with all of the available materials. This menu is constantly updated with new information so please refer to it often with any questions you may have.

2 Documentation

The Help and Support Menu shows a list of all available materials including updates, manuals, and support information that can be downloaded for Metrc users.

3 Testing Lab Transfer Process

Testing Lab Transfer Process Booklet on how the testing process works in Metrc. This booklet shows you how to create a testing package properly, how to transfer it to the testing facility as well as how the test results are entered and viewed.

4

Third Party Support

Some third party companies provide updates to Metrc so please refer to this area for a list of contacts.

5

Contact Information

The customer support area shows how to contact the support desk including phone and e-mail support.

To Contact Franwell directly for support:

Metrc support line - 877-566-6506 - 8:00am to 7:00pm Mountain Time

Acronyms & Glossary

Acronyms & Glossary

Acronyms & Glossary

- Adjustment - A reported change in the quantity of packaged inventory, requiring a reason, such as water loss.
- Buds - The harvested flower part of the plant.
- Business Licensee - A business licensed by the State to grow, process, and/or sell medical marijuana. A business licensee may conduct business with other business licensees, with vendors, and/or with patients.
- Concentrate - An amount of marijuana, in concentrated form, processed on a given date and having a specified weight. This marijuana inventory may be sold or transferred by weight or processed by weight into a Processor. Prior to transfer, bulk concentrate inventory must be packaged into one or more containers, each having a unique RFID tag.
- Dry Trim - The process or act of trimming harvested plants where the buds are trimmed after the plants have dried.
- Employee - An individual who works for a Business Licensee.
- Flowering - Flowering is the gametophytic or reproductive state of Cannabis in which the plant is in a designated flowering space that is a limited access area monitored by one or more surveillance cameras within an OPC facility with a light cycle intended to produce flowers, trichomes and cannabinoids characteristic of medical marijuana. The flowering space shall be clearly identified by signage designated by the MED and all marijuana shall be accounted for as inventory. Flowering plants may only be possessed within a limited access area of a licensed OPC facility.
- Harvest - The process or act of cutting down a plant and obtaining the wet weight of the plant before initiating the wet or dry trim process. The harvest process is performed only on plants from the flowering phase. Any number of plants of the same strain may be harvested at the same time in a harvest batch.
- Harvest Batch - A collection of harvested plants of the same strain which were cut at the same time. There may be multiple harvest batches for the same strain on the same day.
- Hash - Marijuana in a concentrated form, processed on a given date, measured by weight. Hash may be packaged and sold.
- Immature Plant - A non-flowering Marijuana plant that is no taller than eight inches and no wider than eight inches produced from a cutting, clipping, or seedling and that is in a growing/cultivating container that is no larger than two inches wide and two inches tall that is sealed on the sides and bottom.
- Immature Plant Batch - This is a batch of identical immature plants logged into Metrc as a group prior to being moved into the vegetative phase.
- Infused Product - An amount of an infused or non-smokable product, processed on a given

date. This inventory will usually be sold by quantity. Prior to transfer, bulk infused inventory must be packaged into one or more containers, each having a unique RFID tag.

- Kief - Refers to the resin glands (or trichomes) of cannabis which may accumulate in containers or be sifted from loose dry cannabis flower with a mesh screen or sieve.
- Licensee - Any Person licensed or registered pursuant to the State Code.
- Live Plant - A marijuana plant that has not yet been harvested and is in one of the following phases: Immature, Vegetative, or Flowering.
- Metrc Trained Administrator - An Owner or an occupationally licensed employee of a Medical Marijuana Business who has attended and successfully completed Metrc training and who has completed any additional training required by the Division.
- Metrc User - An Owner or an occupationally licensed Marijuana Business employee who is granted Metrc User account access for the purposes of conducting inventory tracking functions in the Metrc system, who has been successfully trained by Metrc Trained Administrator(s) in the proper and lawful use Metrc, and who has completed any additional training required by the Division.
- Patient - An individual who is registered with the State entity and has been recommended medical marijuana by a licensed physician, and who has obtained, or is in the process of, obtaining a Patient Card.
- Package - An amount of marijuana that may be sold, processed or transferred and must be placed into one or more containers, each having a unique RFID tag.
- Production Batch - This is a group of packages created from a production run of infused product.
- Radio Frequency Identification (RFID) - a wireless automatic data capture technology. RFID systems are made up of three components an RFID tag, an antenna and a reading device. An RFID tag contains a silicon chip and that enables it to receive and respond to radio frequency queries from an RFID reading device. RFID tags use the energy from the reader device to power on the tag and send the return signal back to the reading device. Tags usually contain small amounts of information, generally 96 to 512 bits of information. RFID tags can read from short distances of a few inches to longer ranges like 15 feet.
- Shake - The harvested parts of the plant that are not waste.
- Strain - A specific genus grouping of marijuana plants. Strains may be specific to each business.
- Transfer - A transaction in which the custody of the inventory changes to a different Business Licensee, but the ownership of the inventory does not.
- Transportation Manifest - A document containing the details of medical marijuana package(s) transferred between licensed businesses. A digital copy of the manifest will be stored in Metrc.
- Vegetative - Vegetation is the sporophytic state of the Cannabis plant which is a form of

asexual reproduction in plants during which plants do not produce resin or flowers and are bulking up to a desired production size for flowering in a designated limited access area monitored by one or more surveillance cameras as provided by rule. The vegetation space shall be clearly identified by signage designated by the MED and all marijuana located in the vegetation space within a limited access area of an OPC facility shall be accounted for as inventory. Vegetation may only occur within a limited access area upon the licensed premises of an OPC facility. Each vegging plant will be assigned an RFID tag logged into Metrc

- Vegging - A marijuana plant in the vegetative phase not yet flowering.
- Waste - The harvested parts of the plant discarded.
- Wet Trim - The process or act of processing harvested plants where the buds are trimmed before the plants have dried.
- Wholesale Transfer - A transaction in which both the custody and the ownership of the inventory changes to a different business licensee.
