

Industry Generic User Guide

The metrc User Guide 2017 Version 7.1

The Metrc system was developed in accordance with the State and the State's rules and regulations governing the Marijuana Industry. The State is tasked with the regulation of the State's two marijuana industries (Medical and Retail), the State is responsible for providing the rules under which these industries are expected to operate. All rules are written in response to the direction and authority provided by state statute. These rules are put in place in accordance with the State's rules and regulations. For specific questions regarding rules and regulations Metrc users should refer to the State. Operational questions regarding Metrc can be addressed with Franwell Inc.

Please note the State has made several rules with regards to who may and may not access the Metrc system. The regulations define many aspects of the responsibility of who is allowed in Metrc, what they are allowed to do while in the Metrc system and what they are responsible for when they have entered information into the Metrc system. The Metrc manual is a reference tool for those people who are lawfully allowed to actively use the system and have received proper credentials under the enforcement division's rules and regulations. It is assumed that all users of the Metrc manual have read, understand and are compliant with these rules and regulations.

Overview of Metrc

Metrc stands for Marijuana Enforcement, Tracking, Reporting and Compliance. Metrc is a State Mandated Tracking and Reporting Software to chart your chain of custody for your Marijuana and Marijuana Infused Products from seed to sale.

The Metrc™ Compliance Management System allows a licensee to track all of the Marijuana inventory grown, processed, transferred and sold for either medical or recreational use. The Metrc system consists of a web application, web services, a mobile application for site inspection, and a mobile application for industry use. Metrc can integrate with other systems for retrieving information such as licensing or tax from Departments of Health or Revenue or third party systems through the use of the Metrc API.

The goal of the Metrc system is to:

- Capture perpetual inventory quantities for each Licensee.
- Track and record a chain of custody from “starter” plant to patient or consumer acquisition.
- Provide the inspection process with the tools necessary to complete onsite validation of inventory.
- Support the auditing process from a series of exception reports.
- Provide the industry with the means to report the required inventory events.

Life Cycle

The graphic below is what we call the Marijuana Life Cycle. This picture graphically depicts the scope of the Metrc system and how Metrc interacts with the industry. The intention of this slide is to help users understand how the Metrc system was designed and how each process is captured and moved through the industry.

The Steps

- 1 - Cuttings, seedlings, or clones are grouped and identified as an immature batch.
- 2 - An immature plant becomes a vegging plant when the plant is larger than 8" and/or in a container larger than 2". A unique RFID tag is assigned to the vegging plant.
- 3 - A vegging plant becomes a flowering plant when the light cycle changes to 12 hours on 12 hours off.
- 4 - Harvesting is the process of cutting down a plant and obtaining the wet weight before initiating the trim process. It is performed only on plants in the flower phase creating the harvest batch.
- 5 - Marijuana in the form of buds or shake/trim (by weight) may be packaged and sold or processed into hash or infused product. A Unique RFID label is assigned to the package.
- 6 - Packaged inventory is transferred to an infusing business by its own cultivation or from another selling business for the purpose of producing infused products.
- 6a - An infusing business will repack its infused product for transfer to a selling business. A

unique RFID label is attached to the package.

7 - Packaged inventory is transferred to a selling business by its own cultivation, another selling business or from an infusing business, for the purpose of selling inventory.

7a - A selling business will repack inventory for transfer to another selling or infusing business. A unique RFID label is attached to the package by the transferring business.

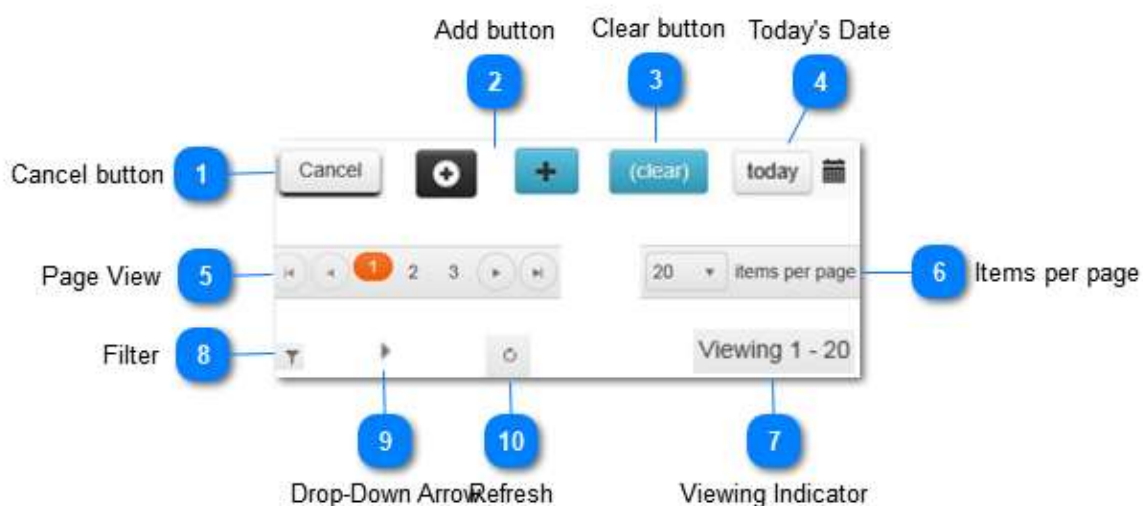

8 - A selling business will sell from packaged inventory.

- If you are an employee of a single facility, you will only see one option.
- If you are an employee of multiple facilities, you will need to select the facility you are working in.
- A medical business and a retail business are considered two different facilities, even if they are in the same building.
- The options in the navigation bar will be based on employee permissions and the facility type.

Also, note that additional kinds of hardware such as RFID reader devices and bar-code scanners are not required to work in Metrc. A standard mouse connected to your device is sufficient to perform all functional tasks in Metrc. Additionally, any PC, Laptop or tablet device with internet access can access the Metrc site.

Common Buttons in Metrc

1

Cancel button

The cancel button will cancel the operation prior to saving information in the field you are working in.

2

Add button

The Add buttons will add additional information fields like the addition of Employees, Packages or Items within their respective fields.

3

Clear button

The Clear button will remove all data fields from the menu you are working in, prior to completing the transaction.

4

Today's Date

The Today Button will enter the date for the day your computer is set to.

5

Page View

This function will show you the number of pages this area has available to use. It is used in conjunction with the items per page.

6

Items per page

The items per page will tell you how many items per page you are currently viewing. You can view 5, 10, 20, 50, 100 per page.

7

Viewing Indicator

The viewing indicator will tell you how many items you are viewing and how many are available to be viewed.

8

Filter

The Filter Button denotes a field you can search (See search function topic).

9

Drop-Down Arrow

The Drop-Down Area denotes a field that has more data available for viewing. Plants, Packages, Transfers are common areas where this feature is available.

10

Refresh

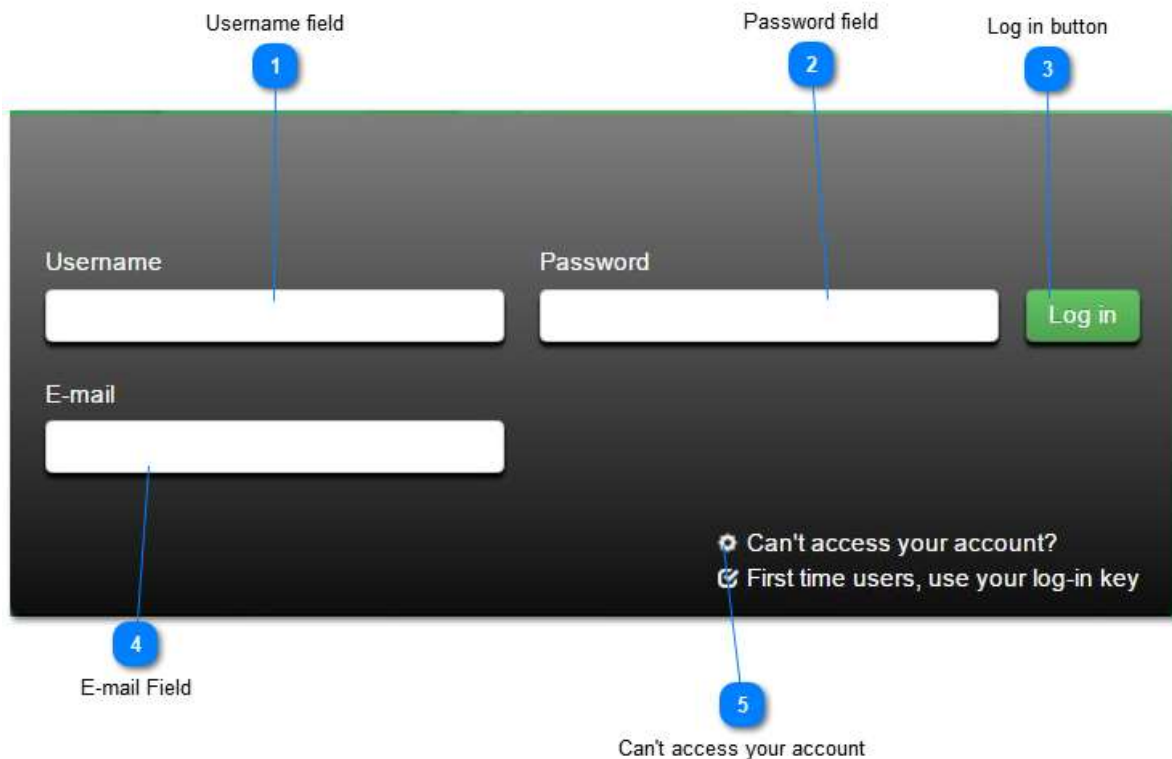

The Refresh Button is found in the lower left corner and will refresh the data on a page.

Logging Into metrc

Logging Into Metrc

Log In Screen

Please note, the State has made several rules with regards to who may and may not access the Metrc system. The regulations define many aspects of the responsibility of who is allowed in Metrc, what they are allowed to do while in the Metrc system and what they are responsible for when they have entered information into the Metrc system. The Metrc manual is a reference tool for those people who are lawfully allowed to actively use the system and have received proper credentials under the enforcement divisions rules and regulations. It is assumed that all users of the Metrc manual have read, understand and are compliant with these rules and regulations.

1

Username field

The user name is your badge number/handler's permit; without spaces. If you do not have a badge number/handler's permit or your badge number/handler's permit is expired, you will not be able to login to Metrc. Your badge number/handler's permit will be granted by the State.

2

Password field

Password requirements for Metrc, at least:

- 1 Upper case letter

- 1 Lower case letter
- 1 Number
- 1 Special character such as a dollar sign, pound or symbol

You are not limited to the number of each you use but must contain at least one of each of the required letters or symbols.

3

Log in button

Once you have entered your license number and password you will be able to log into Metrc.

4

E-mail Field

Email field is a required field, the email used must be the email on file with Metrc.

5

Can't access your account

Should you not be able to access your account, please enter your username and click this link to receive a password reset email.

Metrc Administrator

The roll of the Metrc administrator is to create all of the initial operational functions of a licensed business and make sure employees get training on the use of the Metrc system. Franwell provides ongoing training and support to supplement the business owners efforts. This includes a New Business/New Employee Training and an Advanced Metrc Class every week.

To assist the administrator, all of the administrative functions in Metrc can be delegated with the exception adding facilities. The addition of new facilities is the sole capability of the Metrc administrator.

To get started as a Admin in Metrc, a person can request Admin credentials after completing the Metrc New Business training program. Upon completion of training, a business owner should send an e-mail to support@metrc.com with the following information:

- The Name of the business and DBA if there is one
- The Business License number
- The Owners name
- The Owners badge number/handler's permit or last name and last four of owner's social security number
- A valid email address

The owner may also appoint another employee as their Key Administrator, however the owner must email support@metrc.com and provide the information above for that employee. However, the owner will need to be added in as a regular employee with full permissions.

The Franwell support team will provide an e-mail response with your credentialing response information. Email responses are generated within 24 hours of requests Monday - Thursday. Email requests sent in on Friday will be sent on Monday mornings. If an administrator calls the support desk with a Friday request, allowances can be made. This function is set because the security key generated by the Metrc system is only active for 24 hours.

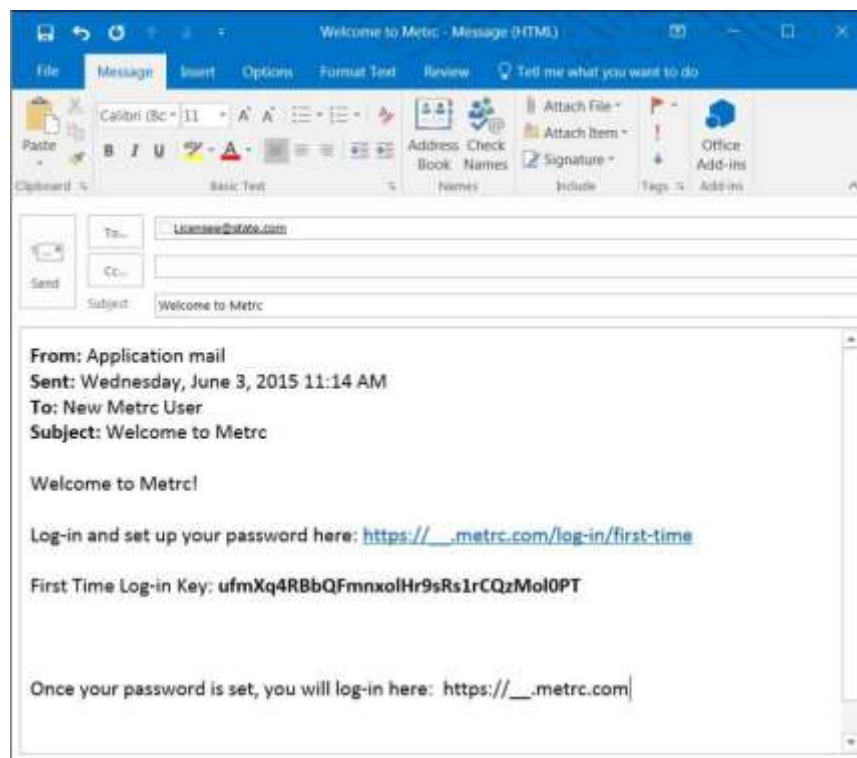

All other Employees - login will be sent after your Metrc Administrator sets you up in Metrc as an employee; you will receive a welcome email. Check your email inbox for the welcome to Metrc email. If you do not receive this, check with your Metrc administrator; they have the ability to resend your welcome email at any time.

Welcome to Metrc email - Example

First Time Credentialing Example:

Within 24 hours of the time a Metrc administrator requests credentials, the requester will receive a "Welcome to Metrc" email from support@metrc.com and will have two links to the __.metrc.com website.

- The first link will redirect the Admin to the website and automatically add the security key into the login screen.
- The second link is provided to allow the user to create a short cut or web link for future use.

Please note:

- The email may be delivered to a persons junk, spam or trash folder or deleted outright because of individual security settings.
- The welcome email is only good for 24 hours and will then become invalid for security purposes.
- If you have trouble with your Metrc credentialing login, you may request another security key by contacting support@metrc.com.
- Please note the __.metrc.com will be replaced with your state url.

User Profile

The screenshot shows a 'Personal & Security Info.' form. Callout 1 points to the 'Enter email address' field. Callout 2 points to the 'Password' field. Callout 3 points to the 'Enter Personal Security Question' field. Callout 4 points to the 'Security Answer' field. Callout 5 points to the 'Phone Number' field. Callout 6 points to the 'Confirm password' field. The form also includes fields for 'Full Name', 'Email', 'Username', and 'Confirm Password'. There are 'Save Profile' and 'Undo Changes' buttons at the bottom.

1

Enter email address

john@gmail.com

A valid email address is required, it should be your own email of record for the company. Users should not use the same email address in Metrc.

2

Password

Password requirements for Metrc, at least:

- 1 Upper case letter
- 1 Lower case letter
- 1 Number
- 1 Special character such as a dollar sign, pound or symbol

You are not limited to the number of each you use but must contain at least one of each of the required letters or symbols.

3

Confirm password

The confirm password field is required to enter the password a second time when changing your password in Metrc.

4

Enter Personal Security Question

This is a security question of your choosing. The personal security question is one that you can answer if you cannot remember your password in order to get into Metrc.

5

Enter Personal Security Question Answer

The Personal Security Question Answer is the answer to your security question that will be used to get into Metrc should you ever forget your password. This is not a case sensitive area.

6

View Security Answer

☐

This feature can allow or not allow you to see the answer as you type it.

7

Phone Number

The Phone Number is your phone number, not your facility phone number.

8

Save Profile button

A green rectangular button with the text "Save Profile" in white.

When you have completed the questions, click the "save profile" button in order to complete.

9

Undo Changes button

A light gray rectangular button with the text "Undo Changes" in black.

Undo Changes button allows you to revert your information back to your previous information instead of what was just entered.

Administrator Initial Setup

Administrator Initial Setup

Admin - Initial Setup

Franwell has created a step by step process that will ensure a licensee captures all of the necessary requirements and information into Metrc. Setting up a facility in Metrc follows a logical process designed around the common business practices of the Marijuana Industry. When setting up your Metrc system, it is important to follow this process to minimize data input and maximize accuracy. Remember, all information created in Metrc is in a live system and subject to review by the State.

Facility Step by Step Setup Process:

- Receive Metrc Administrator credentials
- Add facilities
- Select facility
- For each facility add:
 - employees
 - strains
 - items
 - rooms (Grow/Producer)
 - patients (Dispensary/Retailer)
- Order tags for that facility
- Select next facility, return to previous step

All of the steps listed above are performed in the facility you are working in under the Admin Function of the tool bar and by the facility you are working on. By selecting the facility as shown in the figure A, you will be performing the task you select in figure B for that facility.

Figure A - Facility Selection Figure B - Task Selection

Please remember the facility you are working in is the facility in the black field. In the example shown in Figure A, the menu shows 1 OPC/Producer, 1 MIP/Processor and 2 Dispensary/Retailers. In this example, all tasks being preformed would be in the OPC1 403-0000#.

Set Up Facilities

1

Facility License Number

This is the facility business license number issued by the State . The location and contact information is provided by the State license software and cannot be changed or altered by Metrc.

2

Add button

Multiple facilities may be entered at one time. By selecting the add button, an Admin may add multiple facilities at the same time on this screen.

3

Home

Select a home screen for the facility. This will be the first screen that will appear for the Metrc administrator login. Selection of the home screen does not impact the ability to move within the different areas of Metrc; it is simply a function put in place to allow for easier or more convenient access for the user.

4

Clear button

The clear button allows you to erase all data entered and begin again if the user has a mistake.

5

Cancel button

Click this button to cancel your data entries, without saving, and exit the screen.

6

Add Facilities button

Click this button to save your data and exit.

Adding Facilities is a function that is uniquely required of the Metrc Key Administrator. Only a Metrc key administrator is allowed to add a facility and therefore a Metrc key administrator should complete the addition of all facilities before any other data is entered.

Editing Facilities

Renaming Your Facility

You will now be able to give your facilities an *ALIAS* name or nickname that will appear in the black dropdown facility box. To facilitate this function, we have added an “Edit Facilities” button in the Admin/Facilities screen.

Current Name	Legal Name	License No.	Type
ARROWFLO LLC	ARROWFLO LLC	403-FLO1	OPC
Arrowflo Store 2	ARROWFLO LLC	402-FLO2	MMC Type 3
Arrowflo Cultivation	ARROWFLO LLC	212-FLO3	Retail Cultivation
Arrowflo Store	ARROWFLO LLC	211-FLO4	Retail Store

Page 1 of 1 20 items per page

This nickname feature will only be visible to you and those employees with *Metrc* access within your facility. Transfer manifests will continue to show the legal name only.

Instructions on Changing Your Facility Name

You can change your facility name by selecting Admin/Facilities from the top navigation menu, then highlight the facility you want to rename and click Edit Facilities Name button. You can also just click the Edit Facilities Name button and use the Facility dropdown box, on the left side of the form, to select the facility you want to rename.

Next, type in the alias/nickname you would like to use for this facility and click the green Save Names button.

Note: The Legal name box on the right side of the form is populated with the legal name in the State licensing database. If you decide to go back to the legal name at any point, simply click on the “Set as Current” box.

The Trade Name box will be used in the future to show the DBA name associated with your legal name. For now, this will be unused.

Edit Facilities Name

Employees

A Medical/Recreational Marijuana Business may designate licensed Owners and employees who hold a valid Occupational License/Handler's Permit as a Metrc user. A Medical/Recreational Marijuana Business shall ensure that all Owners and Occupational Licensees/Handler's Permit Holders who are granted Metrc User account access for the purposes of conducting inventory tracking functions in the system are trained by Metrc Administrators in the proper and lawful use of Metrc.

A Marijuana Business is accountable for all actions employees take while logged into Metrc or otherwise conducting Marijuana Business or Marijuana-Infused Product inventory tracking activities.

Activating an employee in the Metrc system is very similar to the process the Metrc key administrator performed. An employee will be added and will receive a credential just as the Administrator. Each employee will receive an email and a link for their first time login to Metrc.

The Metrc system provides the following functionality:

How to enter employees in Metrc include:

- Permissions
- Home
- Welcome Email
- Add an Employee
- Edit an Employee
- Lock an Employee
- Unlock an Employee
- Disable an Employee

When adding an employee, it will be necessary to add permissions that an employee will use to perform tasks in the Metrc system. Employee permissions include:

- Administration - Provides the capability to perform all administrative, plants, packages, transfers and sales tasks. Except adding facilities.
- Plants - Provides the capability to create, move, change phase and create harvests in Metrc.
- Packages - Provides the capability to create, adjust and re-package packages into smaller or larger quantities.
- Transfers - Provides the capability to create, receive, modify or delete transfers.
- Sales - Provides the capability to input sales data or initiate sales uploads.

A Medical/Recreational Marijuana Business and its designated Metrc Administrators and Metrc user(s) shall enter data into Metrc that fully and transparently accounts for all inventory tracking activities. A Medical/Recreational Marijuana Business is responsible for the accuracy of all information entered into Metrc.

Employees Screen

1

Add Employees Button

Add Employees

Add Employees Button is used to add employees with badges/handler's permits as a user to Metrc.

2

Edit Employees Button

Edit Employees

Edit Employees Button is used to access an employee profile should you need to edit it.

3

Lock Button

Lock

Lock button is used to temporarily lock an employee's access to login to Metrc. (An owner may not lock another owner in Metrc.)

4

Unlock Button

Unlock

Unlock Button is used to allow access to a previously locked employee.

5

Status Bar

The Status bar shows all of the relevant information about an employee. The status bar also shows important information about an employees badge number/handler's permit status. Each field is able to be queried by the different parameters of their information.

6

Disable Button

Disable

Disable Button is available to be used when you need to remove an employee from the

license. Upon disabling an employee they will no longer have access to that facility.

7

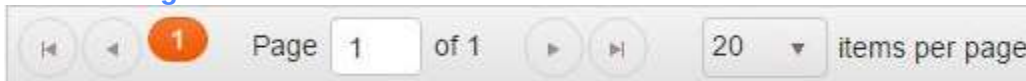

All Button

All Button is available to be used when you need to remove an employee from all facilities they are registered with. Upon disabling an employee, through the all button they will no longer have access to Metrc.

8

Items Per Page

This area will increase or decrease the number of item views per page and shows the number of pages needed to show all items.

9

Items to Display

Items to Display will show you how many total number of items that fit your filtered criteria.

10

Refresh Button

The Refresh Button will help you refresh your filtered criteria up to the moment.

Add Employee

The screenshot shows the 'Add Employees' form with the following callouts:

- 1** Employee License Number: Points to the 'Employee License Number' field.
- 2** Permissions: Points to the 'Permissions' section on the right.
- 3** Additional Locations: Points to the 'Additional Locations' section on the right.
- 4** Email: Points to the 'Email' field.
- 5** Home: Points to the 'Home' dropdown menu.
- 6** Add button: Points to the green 'Add' button at the bottom left.

The form includes fields for 'Employee # 1', 'Employee License Number', 'Email', 'Home', and 'Employment Field'. It also has a 'Permissions' section with checkboxes for 'Plants', 'Packages', 'Transfers', 'Financials', 'Reports', and 'Administration'. The 'Additional Locations' section lists various locations with checkboxes. At the bottom, there are 'Create Employee' and 'Cancel' buttons.

1

Employee License Number

This is the badge number/handler's permit given by the State. Only validly licensed employees may be authorized to work in Metrc. If a badge expires, an employee will be locked out until his badge has been renewed.

2

Permissions

Select by check mark, in each box to allow the employee access to Metrc in the following menus - plants, packages, transfers, administration. This selection will vary depending on the "facility" type you are adding the employee to, the access to information you want the employee to have and the functions the employee will be performing in the system. In the Dispensary/Retailer, you will see an additional "sales" permissions box instead of the "Plants" permissions box. These can be edited as an Administrator deems appropriate.

3

Additional Locations

☒ 10th street | 403-X0001
☐ CO Lofty Med-Cultivation B | 403-X0002
☐ CO Lofty Med-Dispensary | 402-X0001
☐ CO Lofty Rec-Cultivation | 403R-X0001
☐ CO Lofty Rec-Store | 402R-X0001
☐ CO Mishmash Med-Cultivation | 403-X0003
☐ CO Mishmash Med-MIP | 404-X0001
☐ CO Mishmash Rec-Cultivation | 403R-X0002
☐ CO Mishmash Rec-MIP | 404R-X0001
☐ CO Perceptive Labs | 405R-X0001

Additional locations will allow you to check the locations you would like to enter an employee into. You can select individual ones or select the check all box to enter the employee into all locations. Please remember that utilizing this ability will allow the permissions you chose for this employee to be the same for each location you check.

4

E-mail

For Security purposes, it is best to enter a unique employee email in this field. This is where the employee will receive their "Welcome to Metrc" login credentials.

5

Employment Field

Employment ☐ Manager at this Facility

Employment Field is to show whether the employee is a manager at the location.

6

Home

Select the "Home" screen for your employee. When they login to Metrc, the home screen selection will be where that employee is directed upon successful login into Metrc. The home screen does not affect the employees ability to move from screen to screen.

7

Add button

Allows you to enter multiple employee entries from this screen.

8

Create & Save Employees button

 A green rectangular button with the text "Create Employees" in white.

Click on this button to save your work.

9

Cancel button

 A light gray rectangular button with the text "Cancel" in black.

Click on this button to exit the screen, without saving.

Additional Notes on employees:

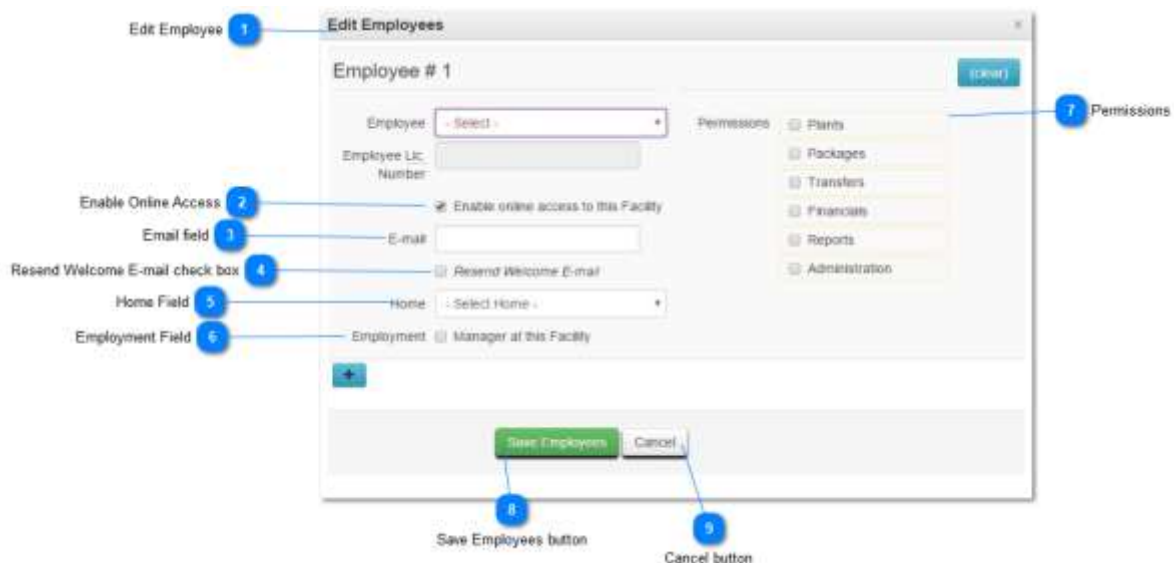

- An employee will only be added to the facility they are requested in. Employees will need to be individually added to each and every facility they will be working in uniquely.
- As a best practice you should only add badged employees to a facility that you want to allow the ability to enter data into Metrc.
- The permissions that you grant the employee will determine which menu's they will have on their tool bar, when logged into Metrc.
- The home screen selection is the first screen the employee will see after successful login to Metrc.
- Be sure to get a valid "unique" email address for an employee to receive the credentialing "Welcome to Metrc" email link.
- The Metrc administrator needs to instruct the employee that the occupational license number (badge/handler's permit) is their login ID (not their email address). Login ID cannot be changed or modified, it will always be the badge/handler's permit number.
- As with the Admin credentials, the "Welcome to Metrc" email link expires in 24 hours. If an employee fails to log in within the 24 hour period, the Metrc administrator can go in and edit the employee and click the "Resend Welcome Email" box to resend another temporary log in to the employee's email.

Edit Employees

1

Edit Employee

Metric allows an Admin to edit an employee. All of the fields used to create an employee can be edited from the "Edit Employee" screen.

2

Enable Online Access

☒ Enable online access to this Facility

Enable Online Access will allow you to remove online access or grant online access to an existing employee.

3

Email field

E-mail

Email field will allow you to edit an employees email address. If you are enabling access for the first time an email address is a required field.

4

Resend Welcome E-mail check box

☐ Resend Welcome E-mail

An employees "welcome to metric" credential email is similar to the Admin email, it will expire within 24 hours of the time it was issued. If your employee did not activate, or receive their login credentials it will need to be resent. Simply select the "Resend Welcome E-mail" check box and select save employee button. This will resend the "welcome to metric" E-mail.

5

Home Field

 A screenshot of a web form showing a dropdown menu labeled 'Home'. The dropdown menu is open, displaying the text '- Select Home -' with a small downward arrow on the right.

Home field will allow you to choose the home field for the employee. This is the landing page where the employee will start at each time they log in.

6

Employment Field

 A screenshot of a web form showing a checkbox labeled 'Employment' which is checked. To the right of the checkbox is the text 'Manager at this Facility'.

Employment field will allow you to show who is a manager at the facility.

7

Permissions

 A screenshot of a web form showing a section titled 'Permissions'. Below the title are six checkboxes, each with a label: 'Plants', 'Packages', 'Transfers', 'Financials', 'Reports', and 'Administration'. All checkboxes are currently unchecked.

Permissions will allow you to change the permissions the existing employee has access to.

8

Save Employees button

 A screenshot of a green rectangular button with the text 'Save Employees' in white.

Click this button to save your work and exit.

9

Cancel button

 A screenshot of a light gray rectangular button with the text 'Cancel' in black.

Click this button to exit without saving.

Remember:

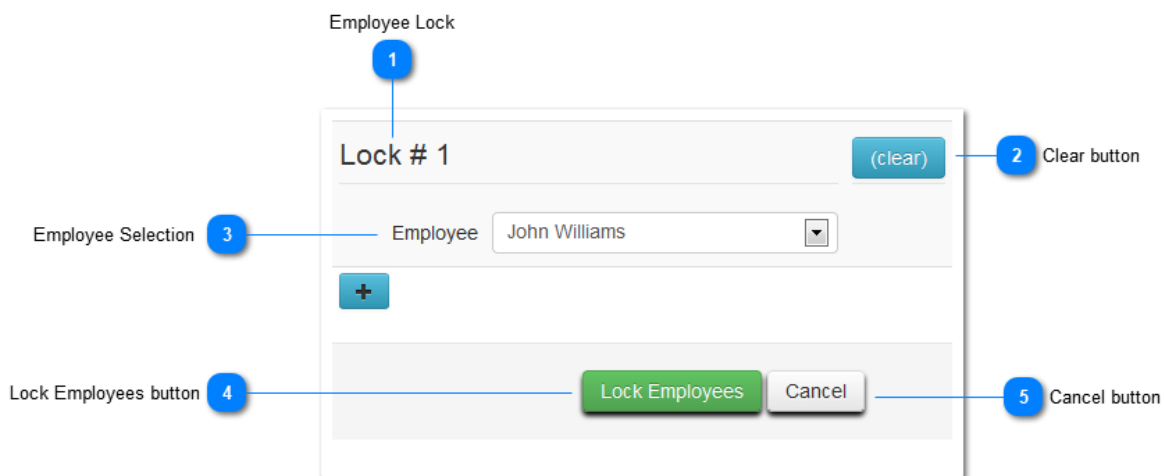

- When you edit an employee's e-mail address it will update in all facilities that employee is assigned to.
- When editing an employee's permissions those changes will only be reflected in the facility the Admin is editing in.

Lock Employee (by Facility)

1

Employee Lock Lock # 1

The Employee lock feature is to allow the Admin to temporarily lock and employee in a facility. Locking an employee will prevent them or someone else from accessing their information and entering data into the Licensees Metrc account. As an example of when an Admin may choose to use the lock feature would be in the case of a leave of absence such as maternity leave or an employee vacation. One owner cannot lock another owner out of Metrc at any time.

2

Clear button

Use this button to wipe out any entries in the field and begin again.

3

Employee Selection

You select an employee to lock, either by drop down or highlighting the row from the previous employee listing.

4

Lock Employees button

Use this button to lock employee by facility.

5

Cancel button

Use this button to cancel all entries and exit the screen.

Remember:

- This feature as with most in Metrc is by facility. You must lock an employee in each facility you want them locked in.
- Locking an employee in one facility will not lock them in all facilities.

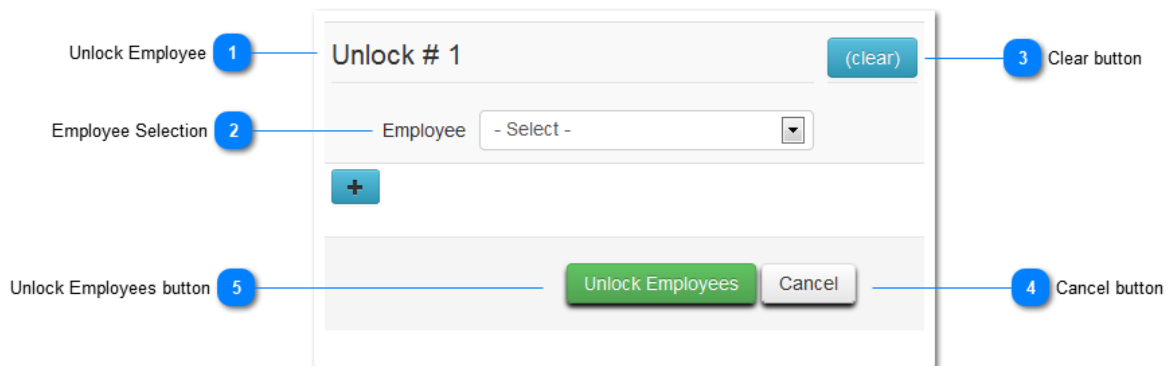

Unlock Employees (by Facility)

1

Unlock Employee

Unlock # 1

The Employee unlock feature allows the Admin to unlock an employee that has been temporarily locked in a facility. Unlocking an employee will restore the employees ability to perform the functions they were originally granted by the Metrc Admin.

2

Employee Selection

Select the previously locked employees from this drop down menu.

3

Clear button

Use the clear button to clear this form and begin again.

4

Cancel button

Use this button to unlock previously locked employee users, save and exit.

Disable an Employee

1 Disable Feature

Disable

The Disable feature should only be used when an Administrator wants to permanently remove someone from a facility. The Disable feature will not remove them from every facility, only the facility the Admin currently has specified.

Examples of when to use the disable feature:

- When terminating an employee
- When an employee will be no longer working in a facility

Please Note:

- You will be prompted before Metrc will disable the employee.
- A disabled employee can be added back as a new employee.
- Disabling an employee will not erase the tasks they performed previously in Metrc.

Rooms Function (OPC/Producer Only)

A room is designed to be a physical location to identify where plants are located in a particular growth phase. The room does not necessarily need to be a room but may also be a location within a given room. As an example, if an OPC/Producer is small and only has one room it may classify multiple areas of a room such as "Row 1, Row 2, Row 3". An additional example, a large OPC/Producer that may have a large room holding several phases of plants of the same strain may choose to use "Veg Room Section 1, Veg Room Section 2, Veg Room Section 3" to provide a specific location for a group of plants of the same strain in a different phase in a single room. As one final example, a group of plants may change phases in the same room and the room continues to change phase making the room and the plants track together up and through the harvest phase. In this case, a room can almost act as a batch.

When setting up your rooms, it will be important to keep in mind the ability to move plants by room and phase. The Rooms function provides an easy way to move plants in large volumes and the room feature can assist in minimizing the efforts in these moves. Rooms can be added, deleted or edited very easily and as often as desired.

1

Add Rooms button

Add Rooms

To add a room simply select the add rooms and a new window will open.

2

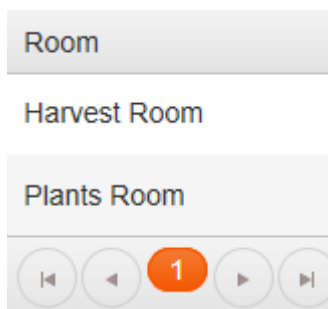

Edit Rooms button

Edit Rooms

Your room name can be any "location" name that you would like to utilize.

3

Room Name List

This list will show you all of the rooms currently located in your Metrc system.

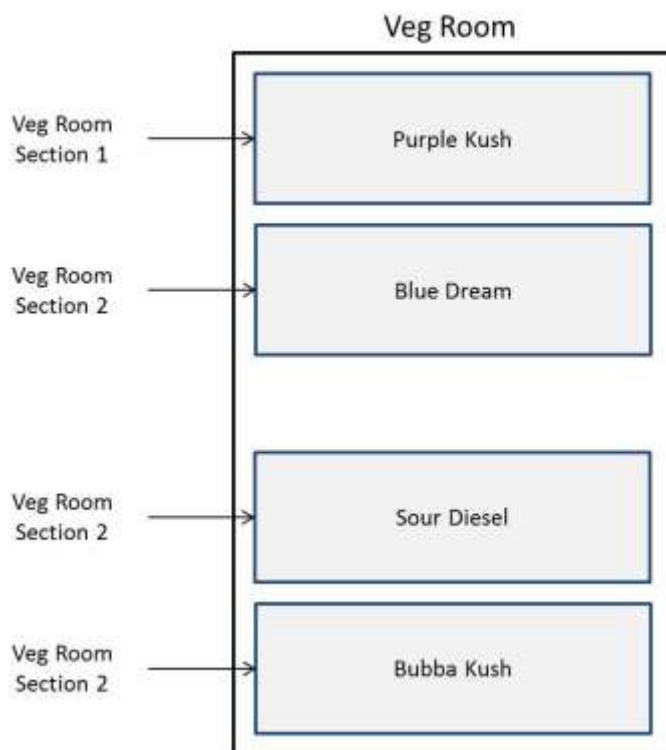

4

Discontinue button

Use this button to permanently remove a room from your list.

The following graphics show two concept layouts of how rooms could be laid out in Metrc to work with the Changes by room function.

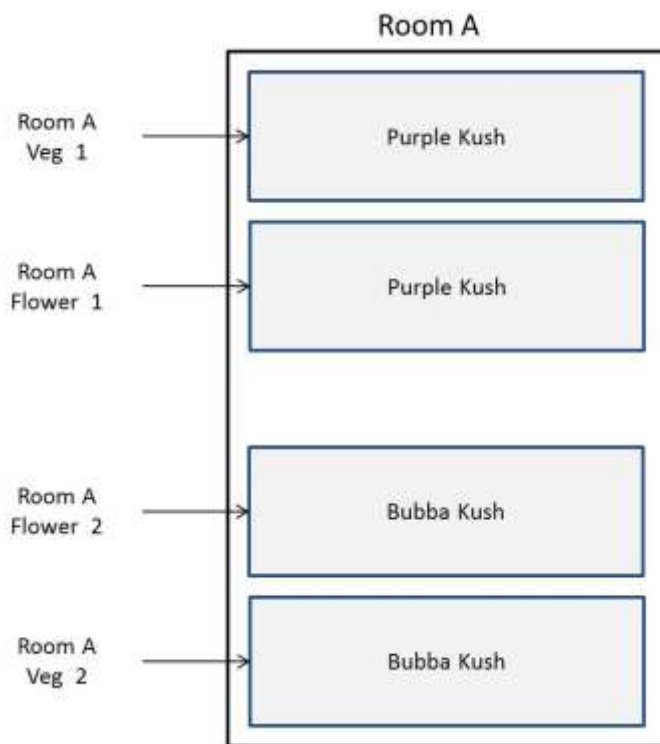

Figure 1Figure 2

In figure 1, we have a scenario where a single room houses multiple strains of vegging plants. In figure 2, we have two strains in two different phases. In Metrc, we would use the add / edit rooms feature and create the rooms to match. It is permissible in Metrc to create rooms to match a facilities operations.

Adding Strains

The screenshot shows the 'Add Strains' form with the following elements highlighted by numbered callouts:

- 1** Strain Name: Points to the 'Name' input field containing 'AK47'.
- 2** Testing Status: Points to the 'Testing Status' dropdown menu showing 'ThirdParty'.
- 3** THC and CBD Content: Points to the 'THC' and 'CBD' input fields containing '.15' and '.058' respectively.
- 4** Indica vs. Sativa: Points to the 'Indica' and 'Sativa' sliders, which are currently set at approximately 25% Indica and 75% Sativa.
- 5** Indica vs. Sativa: Points to the 'Indica' and 'Sativa' sliders, which are currently set at approximately 25% Indica and 75% Sativa.
- 6** Create Strains button: Points to the green 'Create Strains' button.
- 7** Cancel button: Points to the 'Cancel' button.

1 Strain Name

Name

Enter the strain name of all strains you currently grow in your facility.

2 Testing Status

Testing Status

In this area, a Licensee will define whether or not product has been tested and if so was it done in-house or by a third party .

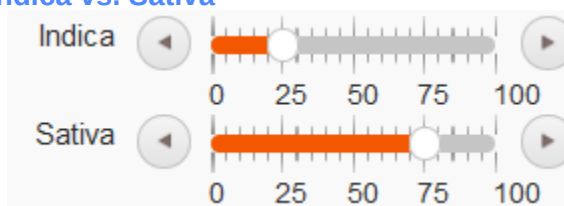

3 THC and CBD Content

THC¹

CBD

This is where THC and CBD content of a particular strain is entered. This is a 2 year average of the testing of this strain.

4 Indica vs. Sativa

This is where a Licensee will indicate the level of Sativa vs Indica that makes up the

origin of a plant. Again, this is a 2 year average of the testing of this strain.

5

THC Potency Info

1. Please report THC potency as a percentage of the overall weight.

This means that if a particular strain tested as having 15% THC potency, then every gram of dried flower of that strain has 0.15 grams of THC.

The reality is that potency can drastically change even between a single plant or from plant to plant. So, the percentage that the MED would like input into Metrc would be the average potency percentage from all tests in the prior two years. If no tests have been conducted please use your best estimate.

6

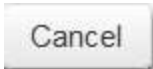

Create Strains button

Select this button to save entered data and create strains.

7

Cancel button

You may select the cancel button to exit the screen without saving any changes.

Edit Strains

Metrc allows you to edit a strain that has already been added to your system. If a strain name has changed or been modified or if a strain has new test data the edit feature can be used to update the information.

Edit Strains

Strain # 1

Strain: CBD Yummy Testing Status: None

Name: CBD Yummy THC: 0.1156 CBD: 0.0975

Indica: 0 25 50 75 100

Sativa: 0 25 50 75 100

1. Please report THC potency as a percentage of the overall weight.

This means that if a particular strain tested as having 15% THC potency, then every gram of dried flower of that strain has 0.15 grams of THC. The reality is that potency can drastically change even between a single plant or from plant to plant. So, the percentage that the MED would like input into mits would be the average potency percentage from all tests in the prior two years. If no tests have been conducted please use your best estimate.

Adding Items

When adding items into Metrc, please keep in mind:

- Item names are used to identify what type of item is packed into a Metrc package.
- Item names should not be just a category name, it should be item specific to what is in a Metrc package.
- Items in Metrc allows each industry facility to have their own item names.
- Each facility creates its own items individually by facility.
- Each item requires a category selection and these categories are setup by the State. The purpose of categories is for reporting like items as groups.
- Your items will identify what is in the package. These items will identify what category the items belong in.
- The package items names will be created by the facility that packages and transfers the item(s). Whichever facility packages an item, will provide the name for it. It will retain that item name, unless you re-package it.

• Item Categories are defined by the State, refer to your State Supplemental to find the specific categories that have been setup by your State.

Add Items

The screenshot shows the 'Add Items' dialog box. It has a title bar 'Add Items' with a close button. Inside, there's a section 'Item # 1' with a '(clear)' button. Below this are two input fields: 'Name' and 'Unit of Measure' (a dropdown menu). Below these are two more dropdown menus: 'Category' and 'Unit of Measure' (another dropdown menu). A blue '+' button is labeled 'Add More Items'. At the bottom are two buttons: 'Create Items' (green) and 'Cancel' (grey). Numbered callouts point to: 1. 'Add Item's Name' (Name field), 2. 'Unit of Measure' (Unit of Measure dropdown), 3. 'Add More Items' (+ button), 4. 'Category' (Category dropdown), 5. 'Create Items button' (Create Items button), and 6. 'Cancel button' (Cancel button).

1

Add Item's Name

Name

This is where you will enter the Items Name. You will need to enter items for the categories below. For those items in bold, you will need a unique item for each strain. (IE: Buds-Blue Dream).

2

Unit of Measure

Unit of Measure

- Select -

The unit of measure will be determined by the category selection above. Depending on the Category selected, the weights will be required, please refer to your State Supplemental for your State's required categories.

3

Add More Items

Select this button to add multiple items from this screen at one time.

4

Category

Category

- Select -

Select a category for each item, please refer to your State Supplemental for your State's

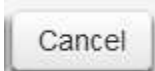

required categories.

5

Create Items button

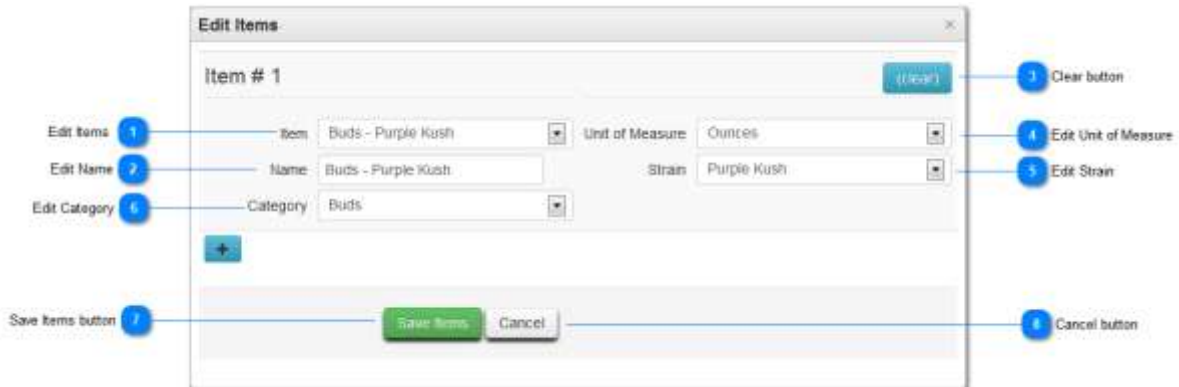

Click this button to create items, save your work and exit.

6

Cancel button

You may select the cancel button to exit the screen without saving any changes.

Edit Items

1

Edit Items

Item Buds - Purple Kush

The Edit Items feature allows a user to change or modify a specific item that has already been created. By using the pull down menu the user can select the item they choose to modify. All of the fields can be changed or modified. The user may also select the item in the item list and then select the edit item feature and it will automatically populate the item in the name field.

2

Edit Name

Name Buds - Purple Kush

This is where you may edit the items name.

3

Clear button

(clear)

The clear button will remove all entries from each field.

4

Edit Unit of Measure

Unit of Measure Ounces

This is where you can alter the unit of measure. You may not be able to change the unit of measure if the category you are using has restrictions on the unit of measure (IE edibles - each only).

5

Edit Strain

 A screenshot of a web interface showing a dropdown menu labeled 'Strain'. The selected option is 'Purple Kush'.

Use the edit strain drop down menu of available strains for selecting the strain the item is associated with. A strain is not required for use with all items. As an example infused products do not require a strain, although a licensee may choose to do so. Some products do require the association of a strain such as buds. Specific questions about strain dependency should be referred to the MED or rules and regulations documentation provided by the MED.

6

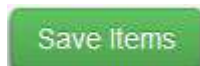

Edit Category

 A screenshot of a web interface showing a dropdown menu labeled 'Category'. The selected option is 'Buds'.

You may change the category the item is associated with. You cannot change the category for an item if you have already created packages using that item. You will have to discontinue that item and create a new item with the desired category. Please refer to your State Supplemental for your State's required categories.

7

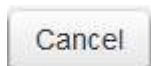

Save Items button

 A screenshot of a green button with the text 'Save Items'.

When you have completed the modifications to the item you can save your changes by selecting the save changes button.

8

Cancel button

 A screenshot of a gray button with the text 'Cancel'.

Using the cancel button before selecting the save button will revert the item back to its original state.

Add Patients (Medical Dispensary Only)

The add patients field is only used by a Medical Dispensary. Recording a patient's number is used to reconcile plant count vs the number of patients a medical dispensary is allowed to grow for. No other information about a patient is stored or accessed by Metrc. Metrc is not connected to any other systems that store or maintain patient information.

Please, keep in mind, you can not enter temporary cards or temporary patients into Metrc. Metrc only allows you to enter patient or plant information for a patient with an active license number and should only be added if they are registered to your facility.

The screenshot shows the 'Add Patients' form with the following fields and buttons:

- 1** License No. (text input field)
- 2** Recommended Plants (text input field with value 6)
- 3** Date License is Granted (text input field with 'today' button)
- 4** Recommended Amount (text input field with value 2 and a dropdown menu set to 'Ounces')
- 5** License Expires (text input field with 'today' button)
- 6** Register Date (text input field with 'today' button)
- 7** Register Patients button (green button)
- 8** Cancel button (grey button)

1

License No.

License No.

The license number field is where a patient's number is entered. The patient number is entered without spaces.

2

Recommended Plants

Recom'd Plants

The Recommended Plants field is where a user will enter the recommended plant count that is recommended by the Dr. This number will ultimately affect the number of plants a Cultivator/Producer will be able to grow, so please enter this information carefully.

3

Date License is Granted

Lic. Granted

Enter the date the patient's license was granted.

4

Recommended Amount

Recom'd Amnt Ounces

Enter the amount of product a patient can purchase, as recommended by the Doctor.

5

License Expires

Lic. Expires 

Enter the date the patient's license expires.

6

Register Date

Register Date

This is where you enter the date the patient registered with your dispensary.

7

Register Patients button

Click this button to register and save the patient data, before exiting the screen.

8

Cancel button

Click this button to exit the screen without saving any data.

Remember

- Patient ID numbers are only used in reference to plant count
- Metrc will not automatically delete a patient. If a facility chooses to delete patients, they will need to do this manually.
- Metrc is not tied to any patient registry or database.

Edit Patients (Medical Dispensary Only)

The screenshot shows the 'Edit Patients' window with the following fields and buttons labeled with numbered callouts:

- 1**: Edit Patient Number (points to Patient field)
- 2**: Edit Recommended Plants (points to Recom'd Plants field)
- 3**: License No. (points to License No. field)
- 4**: Edit Recommended Amount (points to Recom'd Amnt field)
- 5**: Edit License Granted field (points to Lic. Granted field)
- 6**: Edit Date field (points to Register Date field)
- 7**: Edit License Expiration field (points to Lic. Expires field)
- 8**: Update Patients button (points to Update Patients button)
- 9**: Cancel button (points to Cancel button)

1

Edit Patient Number

Patient

Do not edit a patient's number if they get a new patient card. You must discontinue that patient and enter them as a new patient with the new patient number.

2

Edit Recommended Plants

Recom'd Plants

Edit the recommended plants a patient is allowed to have grown for them.

3

License No.

License No.

License No. is where you enter the patient's License number which can also be the same number as their patient number.

4

Edit Recommended Amount

Recom'd Amnt

This will Edit the recommended amount of product a patient can purchase and the unit of measure.

5

Edit License Granted field

Lic. Granted

This field will alter the date the license was granted to the patient.

6

Edit Date fieldRegister Date 12/30/2013 

Enter edits to the registration date.

7

Edit License Expiration fieldLic. Expires 06/28/2014 

The will alter the expiration date of the patient's license.

8

Update Patients button

Click the button to update patients and save the data, before exiting the screen.

9

Cancel button

Click this button to exit the screen without saving edits.

RFID Tags

The requirement for the tagging of plants and packages is derived from the rules and regulations that govern the Marijuana industry. The need for the tag is to provide a unique identification number for each plant and package created in the Metrc system. By providing these unique numbers Metrc creates a chain of custody from the origination of the plants through the to the final sale. Attaching the unique numbers is a common practice in many industries where a chain of custody is required. In fact, many of the features of the Metrc system were developed in the food service and pharmaceutical industries where patient safety and having the ability to perform recalls if necessary are strong considerations. Because the RFID tag has a unique ID number for each plant and package and coupled with Metrc event history, the ability to monitor the movement and contact history of each and every tagged item allows the oversight required for the rules and regulations.

The RFID component

The RFID tags used in the Metrc systems are referred to as a commercial off the shelf (COTS) product. These RFID tags are governed by the EPC (Electronic Product Code) Class 1 Gen. 2 protocol under the ISO18000 part 6. The RFID tags themselves are programmed by Metrc when a customer places an order and specifically assigned to that facility. This is why each facility must place orders individually for that one and one facility only. Tags can not be moved or reassigned. By following this process, the chain of custody becomes very strong and reduces user error by eliminating the need for a user to enter ID numbers into the metrc system.

The RFID tag is made up of several components, the RFID chip, the antenna the chip uses to send and receive it's unique ID number with the substrate the RFID tag is attached to. This assembly is referred to as a RFID inlay and shown in the figure below.

There are two types of tagged inventory in Metrc; Plants and Packages.

The Plant Tag

The Plant Tag is used to track the plant from the immature phase through to the harvest. A clone or seedling is not tracked due to the high degree of loss normally associated to that particular growth phase. Plants are immature, vegetative, or flowering. All plants must enter the system through immature plant batches.

The plant tag has the following information printed on the tag:

- The Application, either Medical (Yellow) or Retail (Blue)
- The facility name
- The Business License number
- The Tag order date
- A UCC 128 bar-code that matches the ID number programmed on the RFID chip and the human readable ID number printed on the front
- The unique 24 digit ID number for the plant
- The MED seal on the back

The plant tags have the RFID inlay imbedded in between two layers of UV, water and smudge resistant materials to allow the tag to withstand the environment required for the plant to grow in.

The Package Tag

Packages are created for immature plants, harvest batches or other packages. Package tags are RFID based as well. The package tags are standard pressure sensitive labels and also come on Medical (Yellow) and Retail (Blue) versions.

The package tag has the following information printed on the tag:

- The Application, either Medical (Yellow) or Retail (Blue)
- The facility name
- The Business License number
- The Tag order date
- A UCC 128 bar-code that matches the ID number programmed on the RFID chip and the human readable ID number printed on the front
- The unique 24 digit ID number for the plant

Remember:

Tags are ordered in Admin for each facility

Plant and Package tags are available (and required) in a Cultivator/Producer.

Package tags are the only tags used in an MIP/Processor, Wholesaler, Medical Dispensary or Retail facility

You will need package tags on ALL product that is transferred out of a facility. Transfers can not be created without the identification of the package ID number.

All tags (both plant and package) are loaded in to your Metrc account and packaged when shipped in numeric order. The labels will be delivered in corresponding order to how they show in your account.

It is a good idea to remove and verify the tags you are using on a plant or package correspond to what you are tagging.

Plant Tag & Attachment

The plant tag was created specifically for use with the Marijuana plant. The material composition is designed for a wet high UV environment. The plant tags come in sequential order and are placed into the shipping box in a fan folded format that matches the order they will be received in your Metrc account. Tags are perforated and have die cut holes to place the tag attachment device through. The following pictures and accompanying instructions demonstrate how the tags are to be used with the different growth phases in the plants growth cycles.

Step 1 – Open the perforated holes in tag

Step 2 – Attach Strap through 1st hole

Step 3 – Attach Strap through 2nd hole

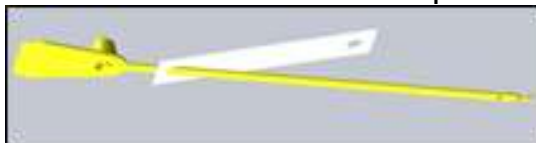

Final Assembly

Because of the nature and size of the immature plants physically attaching the tag to the plant would not be feasible therefore the pointed end of the attachment device was created to insert into the growth medium as shown in the picture below.

Once the immature plant moves into the Veg stage and becomes large enough to support the tag, the assembly can be adjusted to physically attach to the plant.

Step 1 – Remove one end of the strap from one hole

Step 2 – Wrap the Strap around a supporting branch of the plant

Step 3 – Attach Strap into the locking mechanism

Plant Tag Strap User Instructions

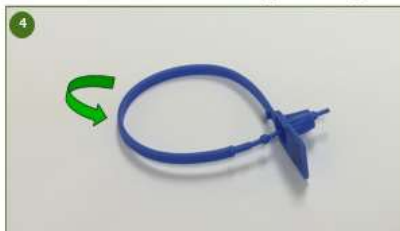

Push the tail-end of the strap through the lock until you hear one click sound and the knot goes through the lock completely to secure it for the first use.

When you want to re-use the strap, push the strap until there is enough space to clip above the first knot. Avoid pressing too hard and allowing the second knot to go through the lock.

Cut the strap as shown in the picture. This will release the strap.

When you are ready to tie the strap again, similar to first usage, push the tail-end until you hear one click sound or see the knot at the end.

5 You can repeat the steps 2-4 to re-use the strap 2 more times.

To be able to release the strap from the last lock, you have to cut the strap from its body.

Package Tags

A package tag is defined as any amount of marijuana or marijuana infused products that may be sold, processed or transferred and must be placed into one or more containers, each container having its own unique RFID tag. This includes but is not limited to all bud, shake and infused products and or concentrates. Any product you intend to transfer must have a package tag.

The Package Tag is perforated with the upper and lower information being the same.

The Package tag breaks into 2 pieces:

- The larger portion stays with the original package or container.
- The lower portion can be attached to another device such as a container at retail or on intake paperwork at a MIP/Processor or Testing Lab.

Tag Orders

Ordering Tags in Metrc is a simple process however it is very important to pay close attention when placing your order. Once a tag order is submitted it can only be canceled before 10pm MST on the day that you place the order. Metrc tags are custom printed for each facility and as such can not be returned once the printing process has begun and are non-refundable; so it is strongly advised that you be sure orders are placed for the correct facility, amount and type of tags required.

Additional notes about tag ordering:

- Tags are ordered from the Admin function
- Tags can be ordered via Credit Card, check or money order
- Payment information is not required to be the licensee or the business owner
- Each facility must have billing information entered. You can choose to ship to a different location (No PO Boxes)
- Tags will be sent by UPS
- Tag cost .45 plant & strap or .25 package
- You can request expedited shipping if you would like. UPS Air (1-3 business days) or Overnight as well as Saturday delivery are available at your expense. Please contact the support line at support@metrc.com or 877-566-6506 to expedite your tag order.

1

Order History

History

This will show all of the details on previously placed orders. See tag order history screen for more details.

2

New Tag Order button

New Tag Order

New Tag Order button is used to begin a new tag order process.

☐ Check or Money Order

Check or Money Order Option is used to choose to pay for your tag order with a credit card. When this option is clicked, the address where to send your payment to is shown.

14

Include a note

☐ Include a note

Include a note field is not a field that is used at all at this time. Please do not include any notes.

15

Note

Please note:
 You MUST place separate tag orders for EACH facility. Because the RFID Plant and Package tags are programmed for each of your facilities individually and placed within your Metro account, make sure that you are in the correct facility with mits when you place the order. Tag orders are NOT transferrable between facilities.
 Once the order has been programmed and assigned for a facility it cannot be reprogrammed or reassigned.
 All tag orders are final, so we recommend that you place your orders carefully.

Note is used to give important information regarding tag orders for all facilities.

16

Place Order button

Place Order button is used to actually place the tag order for a specific facility.

17

Cancel button

Click this button to exit the screen without saving any data.

1

Current/History Tab

Current History

Current Tab is used to show current tag orders that have been placed but not yet received. By selecting the History tab you will be directed to a screen where you can see all activity for previous orders that have been received.

2

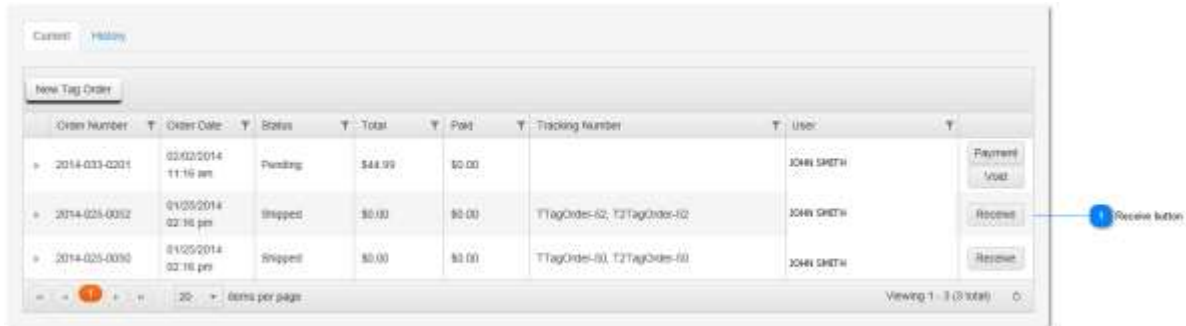

Historical Information

Order Number	Date	Status	Total	Paid	Tracking Number	User
--------------	------	--------	-------	------	-----------------	------

Included in the History is the Order Number, Date, Status, Price, Tracking Number and the person who placed the order.

Receiving your Tags into Metrc

A facility will not automatically receive the tag ID's into their system after placing an order. After tag orders are placed and shipped the tag ID number will become available. The indicator for the ID number availability is when a user can see the "Receive" button visible in the tag order screen. This is a security feature to prevent the tags from becoming diverted or used by anyone other than the licensee who ordered the tags.

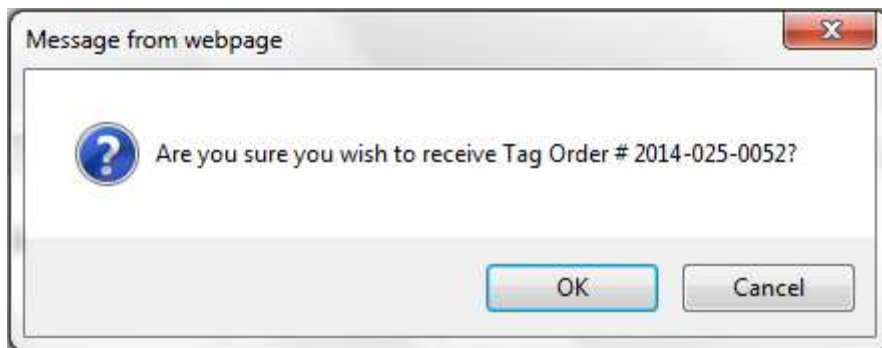

1

Receive button

Receive

Select this button to populate tag ID numbers into the system. The receive button will be visible on the left side of the screen that corresponds to the order number. After selecting the receive button you will see a final confirmation window prompt similar to the picture below.

Plants

Plants

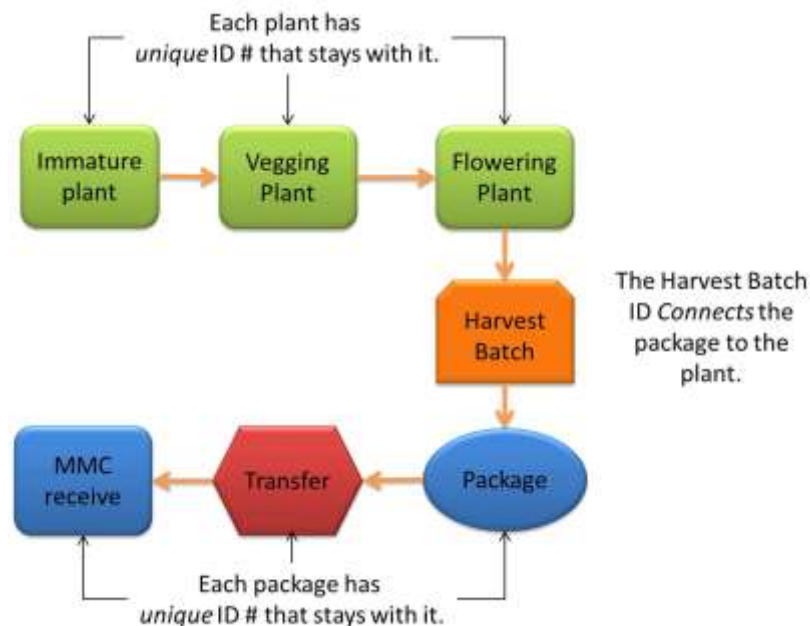

Plants

This Metrc process was developed with the State and businesses within the industry. The following image was created to graphically depict the the growth cycle from seed or clone through the harvesting process. The image shows the scope of the Metrc system and how Metrc interacts with the industry. While there are many variations in the way individual companies grow and harvest, this process captures the most common stages and functions used by the vast majority of the industry. The graphic is used to help the users of the manual to understand the plant steps in this chapter.

The Metrc system is a reporting system with a chain of custody. This chain of custody begins with the seedlings or clones. The two key terms people need to keep in mind are “reporting” and “chain”. From the immature plant all the way to the final transfer received at the Medical Dispensary/Retailer, you should always be able to track a product from one ID number to another. If you cannot see a connection from one point to another, the chain is broken and the process is incorrect. Please see the graphic below.

The only place where a Metrc tag does not represent a point in the process is at the

Cultivator/Producer in the Harvest batch. The harvest batch does not have a tag but still has an ID. The harvest batch ID, as you will see is assigned by the Cultivator/Producer or Metrc will assign it automatically. The harvest batch ID connects the plant ID number to the package tag ID number. In this way, we have connected all of the points of the chain together and can track from one point to the next. Because of this chain, Metrc allows the person(s) handling the plant, batch or package to “report” on the movement of the product from one stage to the next. Remember, a harvest batch MUST be strain specific (One Strain). In this way, the harvest batch is a many to one relationship. The harvest batch is also a one to many relationship with 1 harvest batch equaling many packages.

Navigating in Plants

Navigating in the Plants section is similar to navigating the other sections of Metrc but the plant section has multiple phases each with features that are both common and unique to that particular phase. It is important to note that the plants section of Metrc has been setup to follow all of the applicable rules and regulations and also trying to minimize data entry.

1

Navigation Tool Bar

The Navigation Tool Bar will show you the Plants option. Plants will only be accessible from an OPC/Producer License type. Plants are not available from an MMC/Dispensary, MIP/Processor or Wholesaler facility.

2

Phase Tabs

The Plants Tabs will provide you with the tabs to access the functions required to handle plant and plant movement by phase. The Immature tab will provide the functions necessary to create seedlings and clones while the remaining tabs will handle the specified phases.

3

Immature Buttons

Each section has multiple functions with buttons that are both common and unique to that particular phase. Not all of these functions may be necessary each time you enter information about a plant.

4

Field Indication Bar

The field indication bars show you the information associated to that field. A field can be searched when you see the filter button as shown above and can also be sorted by ascending or descending order.

5

Facility IdentifierA screenshot of a dark rectangular box with white text that reads "AK Lofty Rec-Producer A | 4a-X0001".

AK Lofty Rec-Producer A | 4a-X0001

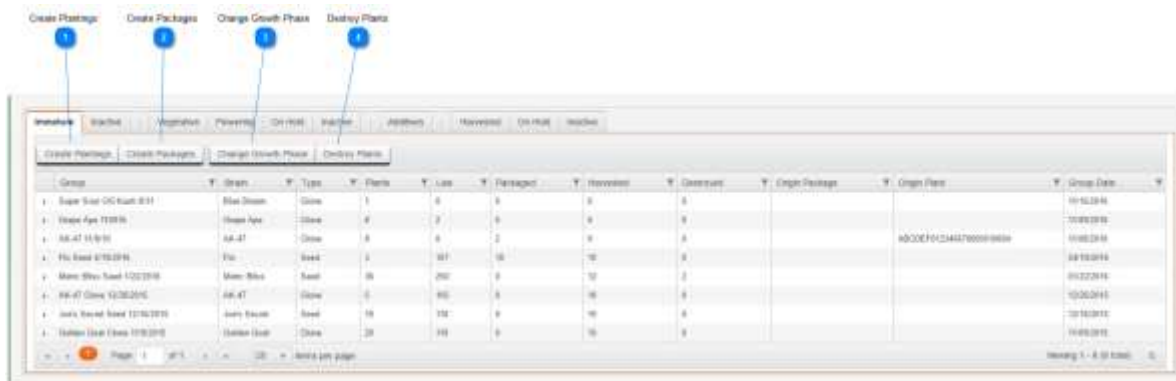

Shows you the facility you are currently working in.

Remember

- ALL package(s) from a Harvest Batch is created from the Harvested Tab.
- Always verify you are performing functions in the facility you intend to.

Immature Plants

The Immature Plants phase is the first phase of the growth cycle captured in the Metrc system. Cuttings, seedlings, clones or seeds are grouped and identified as an immature batch, strain specific. An immature plant becomes a vegging plant when the plant is larger than 8" (tall or wide). A unique RFID tag is assigned to the vegging plant.

The Immature Plants phase in metrc is captured with the following 4 functions:

1

Create Plantings

Create Plantings

Select the Create Plantings Button when you are ready to create plantings of immature plants. Each planting is strain specific. We suggest that you include the strain name (or abbreviation) and the date the planting was planted.

2

Create Packages

Create Packages

The Create Packages button is for when you are creating a package of immature plants or seeds to transfer to another facility. All packages of Immature Plants are strain specific.

3

Change Growth Phase

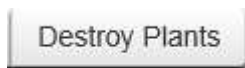

Change Growth Phase

Changing Growth Phase button is used when an Immature Plant(s) is/are ready to be moved from the Immature Phase to the Vegetative Phase of growth. This can be done

individually or as a group.

4

Destroy Plants

Destroy Plants button is used when an Immature Plant(s) ceases to be a viable plant and needs to be destroyed in metrc.

Each of the tabs shown above have specific features and functions and have been broken down individually for easier access and review.

Create Plantings

The first step in the cultivation and harvest process begins with the seed or clones from which the plants are created. Seedling or clone plants are prone to a high degree of loss during this particular phase of the growth cycle. Because of the large number of failures of these plants it was determined placing the RFID tags on plants during this phase was not a suitable option. It was determined that creating a batch of plants at this phase would prove to be the most suitable answer. When you first select plants from an OPC/Producer, you will be taken to the Plants page. From the immature tab you will select the create plantings button.

A new group of seed or clone plants can only be created from an OPC/Producer. When a user selects his OPC/Producer license he/she can proceed to the plants section. From the plants section select the create planting button and the form below will launch. The planting batch will be used to track the plants until they are able to move to the immature phase.

Name	Strain	Type	Plant	Live	Packages	Harvested	Destroyed	Change Package	Origin Plant	Create Date
Super Skunk OG Kush 8/11	Black Diamond	Clone	1	0	0	0	0			11/10/2019
Grape Ape 110016	Grape Ape	Clone	8	2	0	0	0			11/09/2019
JBL27 110116	JBL27	Clone	8	0	2	0	0			11/09/2019
F1 Seed 41002016	F1	Seed	5	107	10	0	0			04/10/2016
White Rhino Seed 11002016	White Rhino	Seed	38	100	0	11	2			01/03/2016
JBL47 Clone 02302016	JBL47	Clone	1	100	0	0	0			12/05/2016
Jack Herer Seed 121002016	Jack Herer	Seed	10	112	0	0	0			12/16/2016
Golden Goat Seed 111002016	Golden Goat	Clone	38	107	0	0	0			11/09/2016

The planting name can be defined by the licensee in whatever way is most suitable for their operation. The batch name is used to temporarily identify the plants until they are ready to receive a RFID tag. Once the plants are viable and have received an ID number, the batch name will go away. You will need to refer to the rules to confirm requirements and limits regarding plant count in order to stay in compliance. All fields in this section will need to be completed.

1

Batch Name

Batch Name

Each Batch Name is required to have a strain. Strains are created in the Admin section of the manual. Strains can be added, deleted and changed as the Licensee requires.

2

Plant Type

Plants Type

You will need to choose if you will be making this group from a seed or clone. Plant type categories are chosen by the MED and cannot be changed or altered without approvals.

3

Strain

Strain

You must select a strain for each group of clones. Strains were created during your Admin setup phase. Additional or new strains can be added at any time.

4

Change Growth Phase button

Planting Date today 

Enter the date you put these plants into the cloning device or area. The Today button can be used to auto populate the current date you are working in Metrc.

5

Plant Count

Plants Count

The plant count is the number of clones or seedling being created in the batch.

6

Create Planting

Create Plantings

Select the Create Plantings Button when you have completed all of the information and are ready to proceed.

7

Cancel button

Cancel

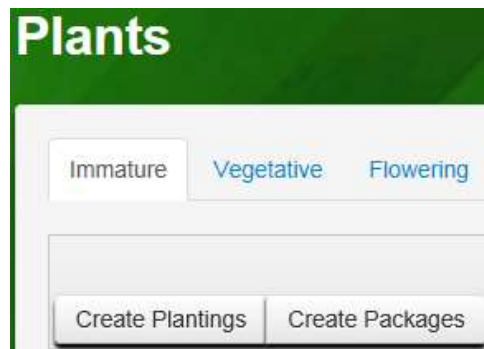

Click this button to exit the screen without saving any data.

Remember:

- Refer to the rules regarding plant counts and how clones or seedlings relate to your plant count.
- You can do multiple clone batches in Metrc
- You can select the blue Add (plus) button to add additional groups of clones.

Plant Packages - Immature

Immature plants can be transferred from an OPC/Producer for sale. Keep in mind that in Metrc it is not permissible to move Flowering plants to another facility for selling purposes. Please see the State rules and regulations of what type of plant may be transferred. In order to move any products that will be sold, it must be moved as a package. To do this, a package must be created in Metrc. You will create a package for the immature plant by navigating to the plants section, choosing the immature tab, and selecting the Create Packages button.

Once you have chosen the create package button, the following form will appear.

1

Batch

Batch

This is the batch you are selecting to remove the Immature plants from that you will be transferring to sell.

2

Item Selection

Item

Please make sure you have selected the appropriate item. The drop down menu will show all available items not just immature plants. Immature plants shipped will need to be chosen from a batch and therefore be strain specific. Items can be created from the

Admin tab. Items can be created, edited and discontinued at any time.

3

Package Tag ID

Tag 

When selling immature plant(s), you cannot use a plant tag; you will need to select a package tag. Select the appropriate tag from the drop down menu. Please remember, all tag ID numbers are in sequential order and correspond to how they arrive in the shipping package. It is advisable to use them in order to make sure the tags stay in order and not become confused.

4

Package Date

Package Date 

Select the package date. You can enter the information manually or select the today button which will choose the date to which your computer is currently set.

5

Plant Count

Plants Count

You will not need to place a RFID tag on each plant. Multiple plants can be selected to ship.

6

Create Package

Click this button to create packages and save your work before you exit.

Remember:

- You can select multiple plants for shipping with one package tag
- Shipping immature plants is strain specific for each package
- Creating a package will automatically adjust the plant count for that batch.

Change Growth Phase - Immature

Changing the growth phase on the Immature tab is where RFID tags are assigned to the plants. At this stage, the batch name will go away and the plants will now have a unique ID number. Once the ID number is assigned, the plant will now have a unique ID number just as a vehicle has a VIN number. The unique ID number is an important step in securing the chain of custody. Using the change immature plant growth phase feature allows the assigning of many tags at one time.

The screenshot shows a software window titled "Change Immature Plants Growth Phase". It contains several input fields and buttons. Numbered callouts point to the following elements:

- 1**: "Immature Plant Batch" pointing to the "Group" field.
- 2**: "Plant Count / Tag Count" pointing to the "Plants Count" field.
- 3**: "Tag ID Selection" pointing to the "Starting Tag" field.
- 4**: "Ending Tag" pointing to the "Ending Tag" field.
- 5**: "Phase Selection" pointing to the "New Phase" dropdown menu.
- 6**: "New Room" pointing to the "New Room" dropdown menu.
- 7**: "Growth Date" pointing to the "Growth Date" field.

At the bottom, there is a green "Change Phase" button and a grey "Cancel" button.

1

Immature Plant Batch

The "Group" field contains the placeholder text "Type part of Plant Group name..." and a magnifying glass icon to its right.

Select the plantings batch that you wish to change growth phase. This will show all available batches that have been created by the facility. You may click on the magnifying glass to see the list of groups available.

2

Plant Count / Tag Count

The "Plants Count" field contains the placeholder text "ex. 100". The "Tags" field is empty.

Enter the number of plants that you are moving to a new growth phase. By entering this number Metrc will assign ID numbers for those plants. The amount of tags will be removed from the available tag inventory. If there are not enough tags only the available tags will be shown.

3

Tag ID Selection

The "Starting Tag" field contains the placeholder text "Type part of the Tag number..." and a magnifying glass icon to its right.

This is where you will select the Starting Tag for the plants, most likely this will be the next tag number in the drop down menu. You may click on the magnifying glass to see the list of tags available. As a best practice, you should try to stay within the numbering

order in the system to match the numbering of the tags as received in the shipment.

4

Ending Tag

Ending Tag

This number will auto-populate with the number selected in the plants count and correspond to the number of tags in the system.

5

Phase Selection

New Phase

Selects the new growth phase for the plants. Phase selection can go forwards or backwards. You can select a new phase without changing the location.

6

New Room

New Room

If you move the plants to a new room, select the room here. You can change the location without changing the room.

7

Growth Date

Growth Date

This is the date of the change, you may select the today button to generate today's date.

8

Change Phase button

When all of the information has been entered and verified, select the change growth phase button to complete the transaction.

Remember:

- It is not a requirement to move all of the plants from the clone or seedling to vegetative phase. Plants grow at different rates and metrc does not require the plants to move all at one time.
- Changing phase does not require a room change, the plants may stay in the same room or they may change rooms. This is up to the facility and how they currently manage their plants growth cycle.
- If you do not have enough Tag ID numbers available, Metrc will show the available number of Tags in the tag count field.

Destroy Plants - Immature

Plants are subject to failure at each stage of the growth cycle. Plants at the clone stage moving to immature are more prone to failure than at any other time. The following form provides the user with a way to destroy plants that have not survived.

The screenshot shows a web form titled "Destroy Immature Plants". It includes a "Plant Group # 1" header with a "(clear)" button. Below this is a "Group" dropdown menu with the placeholder text "Type part of Plant Group name..." and a search icon. To the right is a "Destroy Date" field with a calendar icon, a date format "mm/dd/yyyy", and a "today" button. Below the date field is an "(optional) Note" text area. On the left, there is a "Batch ID" label next to the "Group" dropdown and a "Plant Count" label next to a text input field containing "ex. 100". At the bottom, there is a green "Destroy Plants" button and a grey "Cancel" button. Numbered callouts 1 through 5 point to the Batch ID, Plant Count, Destroy Date, Destroy Plants button, and Note Section respectively.

1

Batch ID

Group

Because the plants are not individually tagged yet, the Batch will show where the destroyed plants are coming from. You will need to choose the batch from the pull down menu.

2

Plant Count

Plants Count

Enter the number of plants that need to be destroyed in this field.

3

Destroy Date

Destroy Date

Enter the date the plants will be destroyed. You can enter this manually or select today and the date will be entered into the field.

4

Destroy Plants button

Once all of the information has been entered and verified, select the green Destroy Plants button which will execute the transaction.

5

Note Section

(optional) Note

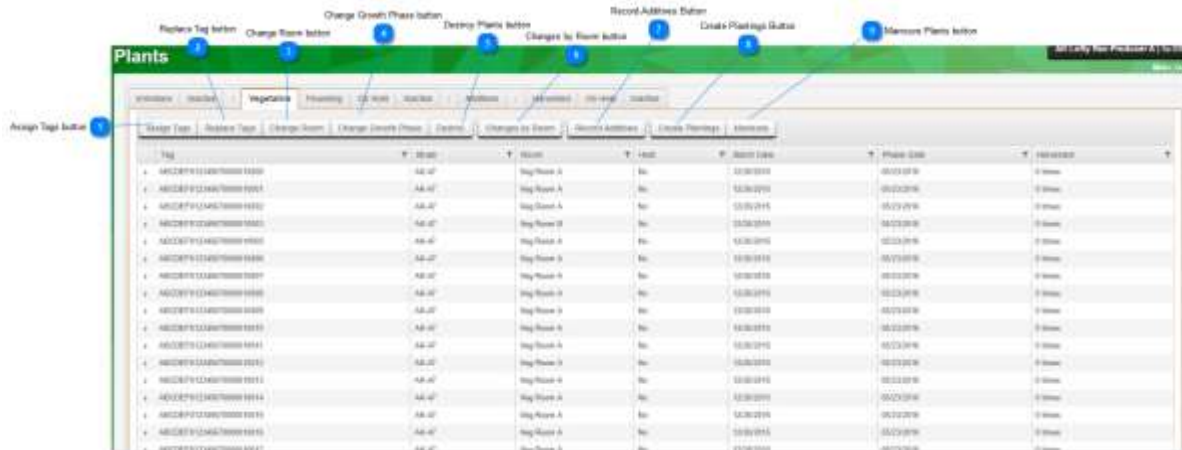

Note section is an optional field that will allow you to make notes as to why a plant or group was destroyed.

Remember:

- Make sure you are destroying the correct plant, once a plant is destroyed it cannot be brought back.
- You should always verify your plant count against the rules to make sure a facility is in compliance with the regulations.
- The destroy plants feature can be used as many times as required. The destroy plants feature is not limited to one time.

Vegetative Plants

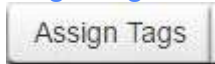

The vegetative state is the second part of the growth cycle captured in the Metrc system. A vegging plant becomes a flowering plant when the light cycle changes to 12 hours on 12 hours off.

The Vegetative Plants phase in Metrc is captured with the following 5 functions:

1

Assign Tags button

Assign Tags button is used to assign a Plant Tag number to a plant that did not get one assigned to it previously.

2

Replace Tag button

Replace Tag button is used to replace a Damaged or Destroyed RFID tag. This is not a very common practice since the RFID tags are created to be very durable.

3

Change Room button

The Change Room button is used when you are moving plants from one room to another.

4

Change Growth Phase button

The Change Growth Phase button is used to change the growth phase and/or the room of a plant during the growth process.

5

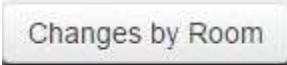

Destroy Plants button

Destroy Plants button is used to destroy a plant when the plant is no longer viable.

6

Changes by Room button

Changes by Room button is used to make changes to all of the plants in an entire room at one time.

7

Record Additives Button

Record Additives button is where you will record the additives used on plants or rooms of plants. Additives would include fertilizer, pesticide or other.

8

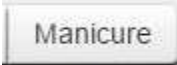

Create Plantings Button

Create Plantings button will allow you to create a planting of a clone or a seed from a vegetative plant.

9

Manicure Plants button

Manicure Plants button is used to create a manicure batch when trimming from Vegetative plants in anticipation of selling or processing the product being trimmed off of the plant. If product is being trimmed off of a vegetative plant in anticipation of wasting it, that does not get reported in Metrc; it gets reported in the waste log that is located at the OPC/Producer.

Each of the tabs shown above have specific features and functions and have been broken down individually for easier access and review.

Assign Tags - Vegetative

It is possible, although not recommended, to move plants into metric without having tags assigned to them. In this case, tags can be assigned in the Veg or Flowering phase. The first step in assigning tags is to locate the plants that have not had tags assigned to them. To locate the plants, you can sort all of the plants in the ID field by ascending or descending order and the plants with no ID numbers will appear first.

Change Room Change Growth Phase Assign Tags Replace Tag Destroy Plants Changes by Room		
Tag *	Strain	Room
+	TN Orange Kush	Veg Room 1
+	TN Orange Kush	Veg Room 1
+	TN Orange Kush	Veg Room 1
+	Spring Hill Kush	Plants Room 1

You can select 1 plant at a time or select multiple plants by using the control or shift keys and select with your mouse. By choosing the assign tags button, the assign tags form below will appear.

The dialog box titled "Assign Tags to Vegetative Plants" contains the following elements:

- 1** Plant Count: A text input field showing "0".
- 2** Tags Count: A text input field.
- 3** Starting Tag ID: A dropdown menu showing "- Select -".
- 4** Ending Tag: A text input field.
- 5** Tag Date: A date picker field.
- 6** Assign Tags button: A green button labeled "Assign Tags".
- Cancel button: A white button labeled "Cancel".

1

Plant Count

Plants Count 0

The exact amount of tags required is auto populated to match all the unassign tags. You cannot just assigned some of the tags. The system will only let you assign all the tags at the same time providing you have enough tag numbers available.

2

Tags CountTags Count

This automatically will count the number of tags you will need and have been selected on the started and ending tag fields. This autocalculates for you.

3

Starting Tag IDStarting Tag

Enter the ID of the first tag you wish to use.

4

Ending TagEnding Tag

The ending tag ID number will auto-populate in sequential numeric order, depending on the plants count field entry.

5

Tag DateTag Date

Select today's date or enter the date manually.

6

Assign Tags button

Click the assign tags button to save your entries and exit the screen.

Replace Plants Tag - Vegetative

In the event that an ID tag has become lost or misplaced, a tag can be replaced providing a new ID number for that plant. The following form needs to be completed.

The screenshot shows a web form titled "Replace Vegetative Plants Tag". It contains the following elements:

- Plant # 1**: A text field with a "(clear)" button next to it.
- Plant**: A dropdown menu showing "ABCDEF012345670000000011".
- New Tag**: A dropdown menu showing "ABCDEF012345670000001156".
- Repl. Date**: A date field showing "01/31/2014" with a calendar icon.
- Replace Tags button**: A green button labeled "Replace Tags" and a grey button labeled "Cancel".

Numbered callouts point to these elements: 1 points to the Plant dropdown, 2 points to the New Tag dropdown, 3 points to the Repl. Date field, and 4 points to the Replace Tags button.

1

Plant

Plant ABCDEF012345670000000011

Select the plant ID number from the drop down, for the plant tag you wish to replace (original ID).

2

New Tag

New Tag ABCDEF012345670000001156

Select the next available NEW plant tag id number from the drop down menu.

3

Replace Date

Repl. Date 01/31/2014

Enter the date you are replacing the plant tag with a new tag.

4

Replace Tags button

Replace Tags

Click this button to save the entries and assign the new plant tag number to the plant. Therefore, the old plant ID number is no longer valid.

Remember:

- Replacing a tag should be a rare event
- When you replace a tag that tag will no longer be shown in your system.

Change Room - Vegetative

The change room feature allows you to move plants from one room to another. Plants can be moved one at a time or in multiples.

To select multiple plants, you can use the control (Cmd button on a Mac) or shift buttons on your computer in conjunction with your mouse to highlight all of the plants you would like to move. Simply hold down the control key (Cmd key on Mac) and select the individual plants or hold down the shift key and select the beginning and ending plant and your left mouse key to choose the plants you would like to move. The highlighted plants will be shown in orange. See picture below.

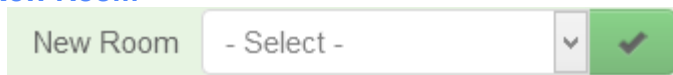

Change Room Change Growth Phase Assign Tags Replace Tag Destroy Plants Changes by Room		
Tag	Strain	Room
ABCDEF012345670000000001	Spring Hill Kush	Plants Room 1
ABCDEF012345670000000002	Spring Hill Kush	Plants Room 1
ABCDEF012345670000000003	Spring Hill Kush	Plants Room 1
ABCDEF012345670000000004	Spring Hill Kush	Plants Room 1

When you select multiple plants, the change room form will add multiple fields. Metrc will allow you to apply single attributes to multiple plants. In the change room area the New Room and Move Date can be selected one time and applied to all of the plants in the list. See picture below.

The screenshot shows the 'Change Flowering Plants Room' form. It includes a 'Template' section at the top with a 'New Room' dropdown (labeled 1) and a 'Move Date' field (labeled 2). Below this are sections for 'Plant # 1' and 'Plant # 2', each with a 'Plant' dropdown (labeled 3) and a 'Move Date' field. At the bottom, there is a 'Perform Move' button (labeled 4) and a 'Cancel' button. The form is designed to allow moving multiple plants at once by applying a single new room and move date to all selected plants.

This example shows two plants being moved, you may however choose as many plants as you like.

1

New Room

 A form with a label 'New Room' followed by a dropdown menu showing '- Select -' and a green button with a checkmark.

New Room is used to select the new room for the plant(s). Use the drop down to select available rooms (locations) to move the plant(s) to. After selecting the new room, select the apply button to add the new room to all plants in the list.

2

Move Date

 A form with a label 'Move Date' followed by a calendar icon, a text input field with 'mm/dd/yyyy', a 'today' button, and a green button with a checkmark.

Enter the date the plants were/ are being moved. After selecting the new date, select the apply button to add the date to all plants in the list.

3

Plant ID

 A form with a label 'Plant' followed by a text input field containing 'ABCDEF012345670000000038' and a search icon.

The plant ID number will be populated in sequential order from the orange highlighted list the user initially selected.

4

Perform Move button

 A green button with the text 'Perform Move'.

Click this button to save your entry and move the plant(s).

If you choose to select a single plant, you can simply select the Change Room Button on the far right end of the page. See picture below:

Change Room Change Growth Phase Assign Tags Replace Tag Destroy Plants Changes by Room			
Tag	Strain	Room	
ABCDEF012345670000000001	Spring Hill Kush	Plants Room 1	
ABCDEF012345670000000002	Spring Hill Kush	Plants Room 1	
ABCDEF012345670000000003	Spring Hill Kush	Plants Room 1	

When you select the change room button, the following form will open.

Change Vegetative Plants Room

×

Plant # 1

- Select -

▼

+

Perform Move

Cancel

Complete the information for all of the plants in the form just as you would have for a multiple move shown in the first example.

Remember:

- In order to use the template for multiple plants, you must highlight them in orange in the plants screen before selecting the change room button.
- You can still add or remove plants to the list by using the Blue Add (+) or Minus (-) buttons.
- You can still move plants back to the original phase if you have made an error.
- Changing large numbers of plants may still be faster with the change by room feature.

Change Growth Phase - Vegetative

The Change Growth Phase feature allows you to change the Growth phase of plants from one phase to another. Plants can be changed one at a time or in multiples.

To select multiple plants, you can use the control or shift buttons on your computer in conjunction with your mouse to highlight all of the plants you would like to move. Simply hold down the control key and select the individual plants or hold down the shift key and select the beginning and ending plant while using the left mouse key. This will select the plants you would like to move. See picture below.

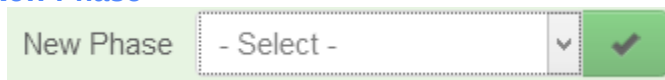

Change Room Change Growth Phase Assign Tags Replace Tag Destroy Plants Changes by Room		
Tag	Strain	Room
ABCDEF012345670000000001	Spring Hill Kush	Plants Room 1
ABCDEF012345670000000002	Spring Hill Kush	Plants Room 1
ABCDEF012345670000000003	Spring Hill Kush	Plants Room 1
ABCDEF012345670000000004	Spring Hill Kush	Plants Room 1

After highlighting the plants, use your mouse to select the change growth phase button and the Change Growth Phase form below will open.

The screenshot shows the 'Change Vegetative Plants Growth Phase' form. It includes a 'Template' section at the top with dropdowns for 'New Phase' (labeled 1), 'New Room' (labeled 2), and a 'Growth Date' selector (labeled 3). Below this are two plant entry sections, 'Plant # 1' and 'Plant # 2'. Each section has a 'Plant ID' field (labeled 4), a 'Replace Tag' field (labeled 5), and dropdowns for 'New Phase', 'New Room', and 'Growth Date'. At the bottom, there is a 'Change Phase button' (labeled 6) and a 'Cancel' button.

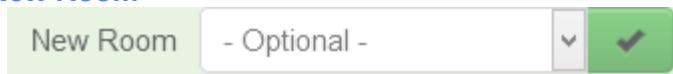

This example shows two plants being moved, you may, however, choose as many plants as you like.

1

New Phase

 A form element for selecting a new phase. It consists of a text label 'New Phase', a dropdown menu currently showing '- Select -', and a green button with a white checkmark.

Select the phase the plant is moving to. After selecting the new phase, select the green checkmark button to add the new phase to all plants in the list.

2

New Room

 A form element for selecting a new room. It consists of a text label 'New Room', a dropdown menu currently showing '- Optional -', and a green button with a white checkmark.

Select the room the plant will be moving to in its new phase. After selecting the new room, select the green checkmark button to add the new room to all plants in the list. This is optional, if the plants are not moving rooms or if the plants are moving to different rooms you can choose not to use this function.

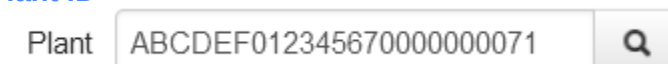

3

Growth Date

 A form element for selecting a growth date. It consists of a text label 'Growth Date', a calendar icon, a text input field containing 'mm/dd/yyyy', a button labeled 'today', and a green button with a white checkmark.

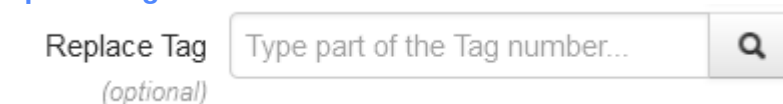

Enter the date that the plant(s) changed to the new Growth Phase. After selecting the date, select the green checkmark button to add the date to all plants in the list.

4

Plant ID

 A form element for entering a plant ID. It consists of a text label 'Plant', a text input field containing 'ABCDEF012345670000000071', and a search icon (magnifying glass).

The plant ID number will be populated in sequential order from the orange highlighted list the user initially selected.

5

Replace Tag

 A form element for replacing a tag. It consists of a text label 'Replace Tag', the word '(optional)' below it, a text input field containing 'Type part of the Tag number...', and a search icon (magnifying glass).

The plant tag can be replaced at this phase if the tag was lost or misplaced during the change or move process.

6

Change Phase button

 A green rectangular button with the text 'Change Phase' in white.

Click this button to save your entries and selections, to change the phase of the plant(s).

To Change the Growth Phase of a single plant, select the Change Growth Phase Button on the

far right side of the page. See picture below:

Change Room Change Growth Phase Assign Tags Replace Tag Destroy Plants Changes by Room		
Tag	Strain	Room
ABCDEF012345670000000001	Spring Hill Kush	Plants Room 1
ABCDEF012345670000000002	Spring Hill Kush	Plants Room 1
ABCDEF012345670000000003	Spring Hill Kush	Plants Room 1

When you select the Change Growth Phase button, the following form will open.

Change Phase

Cancel

Complete the information for all of the plants in the form just as you would have for multiple plants shown in the beginning example above.

Remember:

- In order to use the template for multiple plants, you must highlight them in orange in the plants screen before selecting the change room button.
- You can still add or remove plants to the list by using the Blue Add (+) or Minus (-) buttons.
- You can still move plants back to the original phase if you have made an error.
- Changing large numbers of plants may still be faster with the change by room feature.

Destroy Plants - Vegetative

Plants are subject to failure at each stage of the growth cycle. The following form provides the user with a way to destroy plants that have not survived.

The screenshot shows a web form titled "Destroy Vegetative Plants". It has a "Template" section at the top with a "Destroy Date" field containing a calendar icon, a text input with "mm/dd/yyyy", a "today" button, and a green checkmark button. Below this are two rows for "Plant # 1" and "Plant # 2". Each row has a "Plant" field with a text input containing a long alphanumeric ID and a search icon, followed by a "Destroy Date" field with a calendar icon, a text input with "mm/dd/yyyy", and a "today" button. At the bottom, there is a "Destroy Plants" button and a "Cancel" button. Numbered callouts point to: 1. The green checkmark button in the Template section. 2. The Plant ID input field in the Plant # 1 row. 3. The "today" button in the Destroy Date field of the Plant # 1 row. 4. The "Destroy Plants" button at the bottom.

1

Destroy Date

This close-up shows the "Destroy Date" section. It includes a label "Destroy Date", a calendar icon, a text input field with the placeholder "mm/dd/yyyy", a "today" button, and a green button with a white checkmark.

Metrc will allow you to apply the date to multiple plants. Enter the date into the Destroy Date field either manually or select today and metrc will enter the date on your computer. After the date is entered, select the green checkmark button and the date will be applied to all of the selected plants.

2

Plant ID

This close-up shows the "Plant" field. It has a label "Plant", a text input field containing the alphanumeric string "ABCDEF012345670000010701", and a search icon (magnifying glass) to the right of the input field.

The plant ID number shows the plant that will be destroyed.

3

Destroy Date

This close-up shows the "Destroy Date" section without the green checkmark button. It includes a label "Destroy Date", a calendar icon, a text input field with the placeholder "mm/dd/yyyy", and a "today" button.

If you choose not to use the green apply function shown in item 1, you can enter the dates for the plants manually or select the today button.
